INTRODUCTION

The Crash Reporting Manual

Origins of the Manual

Colorado Statutes state, in part, that the Department of Revenue, Motor Vehicle Division “shall prepare and upon request, supply to Police Departments, Coroners, Sheriffs, and other suitable agencies or individuals, forms for accident reports required under this article, which reports shall call for sufficiently detailed information to disclose, with reference to a traffic accident, the contributing circumstances, the conditions then existing, and the persons and vehicles involved.”

Note that while the Colorado statute (CRS 42.4.1601) refers to “accident”, the generally accepted and preferred term is “crash.” In the 1997 NHTSA campaign the stated goal was “to eliminate the word ‘accident’ from the realm of unintentional injury, on the highway and across the nation” in order to more fully support the application of “all the appropriate resources to bear on the enormous problem of motor vehicle collisions.

“Rather than implying an accident as an unavoidable incident, the change in word emphasizes that “motor vehicle crashes and injuries are predictable, preventable events. Continued use of the word ‘accident’ promotes the concept that these events are outside of human influence or control. In fact, they are predictable results of specific actions.”

The State Traffic Records Advisory Committee (STRAC) has developed this manual to aid Colorado Peace Officers in completing traffic accident investigation reports.

In a joint, cooperative effort with STRAC, the Department of Revenue, Motor Vehicle Division has revised the Investigator’s Traffic Crash Report, **DR3447**. This manual was developed not only to provide information concerning these revisions, but to create uniformity in crash reporting by all law enforcement agencies. This revised manual has been compiled to provide answers to many recurring questions asked by peace officers when completing the Investigator’s Traffic Crash Report.

Over seventy individuals were consulted for this effort, representing organizations as diverse as Safe Kids, Bike Denver, Bicycle Colorado, MADD, DUID Victims Voices, City and County law enforcement and engineering, CSP, DRCOG, CDOR, CDOT, CHPHE, CDHS, CDE, CDAC, CDPS, FMCSA, NHTSA, and CMCA. Over the period from May of 2016 through May 2017, scores of work sessions were held addressing various components of the crash data (crash, vehicle, driver, non-motorists, the roadway, and the environment), as well as a range of uses for the data (engineering, behavior, enforcement, and health).

Keep in mind that the manual is designed as a set of guidelines only; there is no way to cover every conceivable question raised in the course of investigating a crash.

Changes in Crash Reporting

Many of the changes in the revised Traffic Crash Report (**DR3447**) reflect a continued trend across the United States to evolve to a more uniform set of crash data. With better data, problems can be accurately identified. Subsequently, goals and performance measures can be established, resources can be allocated, and vehicle safety countermeasures can be engineered. There are several reasons to modify the existing crash report:

- There is a growing number of non-motorists (bicyclists and pedestrians) involved in crashes with increased interest in how to prevent these types of crashes.
- Outcomes studies with motor vehicle crash injuries data linked to information from the EMS Trauma Registry assists in identifying serious injuries and fatalities and how to prevent them based on the DR3447 crash data.
- Distraction has been increasing, especially with phones and electronic devices being used by drivers of vehicles, and national attention is now being focused on distracted driving as a significant safety issue.
- With the passage of Colorado's Amendment 64, the use of marijuana in Colorado has been legalized, and impaired driving due to marijuana use is a significant concern, especially with respect to crashes caused by drugged driving.
- Autonomous vehicles are on the way, and the DR3447 contains data to be collected for these new technologies as they become more common on Colorado roadways.

This version of the report and the corresponding manual specifically provides guidance for programming electronic crash data systems to accept DR3447 data in ways that makes filling out the form easier for the investigating officer, as the overarching goal for Colorado is to achieve electronic crash reporting across all agencies over time.

The Growing Importance of Data

The importance of accurate data collection and reporting cannot be overemphasized. Many individuals and agencies, both from the public and private sector, use and rely on the information gathered on crash reports.

Motor vehicle crash reporting provides valuable data to many different groups: the traffic engineer planning to resurface a road; the city planner developing safe school routes; the high school driver education teacher planning a curriculum; the public works director applying for a State grant for reconstructing a hazardous intersection; the police sergeant targeting selective enforcement; the motor vehicle administrator; the highway safety planner; and countless others who need timely, complete, and accurate motor vehicle crash information.

These stakeholders need high-quality data to develop policies and programs that will improve the safety and the operation of the Nation's roadway transportation network. Improving motor vehicle traffic crash data will help State and local agencies identify specific traffic safety problems, communicate safety issues

to the public and media, make better programming and resource allocation decisions and enable better monitoring and program evaluation. Ultimately, better data will lead to safer roadways.

Millions of dollars are spent on initiatives related to roadway safety in Colorado each year. There are increasing demands that those efforts be data driven to meet the needs of safety analysts. At the same time, it is important to ensure that officers completing the forms can efficiently and reliably enter the requested data. Other considerations include the ability of officers to enter and submit crash data electronically, as well as the ability to link crash data to other data sets for improved safety analysis.

This manual should assist every peace officer in Colorado with the reporting of timely, accurate and consistent crash information. That information leads to improved highway safety at the local, state, and federal level.

Significant Changes with the DR3447

To respond to the evolving needs for high quality data related to crashes, the Colorado crash report form underwent a significant overhaul.

The revised **DR3447** incorporates research and guidelines from the Model Minimum Uniform Crash Criteria (MMUCC), the National Highway Traffic Safety Administration (NHTSA), American National Standards Institute (ANSI), the Federal Highway Administration (FHWA), and the Federal Motor Carrier Safety Administration (FMCSA).

Changes to the Data Model

The following changes were made to the data model:

Element	Action	Notes
Hit & Run	Added	So that the event occurrence of a hit & run wasn't lost once the investigation uncovered the driver/owner
Lat/long	Specified	Changed to decimal degrees, to ensure more consistent collection
Intersection/offset	Clarified	To ensure consistency and usefulness of the location data
Route & milepoint/offset	Clarified	To ensure consistency and usefulness of the location data
Number of Lanes Blocked	Added	To assist with Traffic Incident Management
Lane Position	Added	To assist with Traffic Incident Management
Transported by	Expanded	For better tracking of fatal-related data
Autonomous vehicle	Added	To address emerging technologies
Vehicle function	Added	To separate the body style of the vehicle (what it looks like) from the vehicle function (what it does).
Driver distraction	Expanded	To address a growing area of concern
GDL restriction compliance	Added	To facilitate effectiveness studies

Element	Action	Notes
Driver Action, Contribution	Multiple choices	To improve the data available for studies, to reduce the challenge for officer (“which one do I choose?”)“?)”?)
Non-Motorist from Vehicle	Separated	To make the data easier to collect and to analyze
Bicyclist/Pedestrian facility Location prior to impact Actions prior Safety equipment	Added	To have better data to address the growing number of bicyclist and pedestrian crashes
Occupant (main form and fatal supplement)	Consolidated	To reduce redundancy
Road contour (curves/grades)	Clarified	
Road surface	Removed	Not needed, not easy for officer to select
Vehicle Types	Reduced	Removed combinations (with trailers), easier for officer to enter
Trailers	Expanded	To handle the combinations that can occur: Up to 4 trailers (plus a dolly)
CMV oversize	Expanded	To better address safety concerns related to oversized (weight, length, etc.) vehicles
Occupant	Expanded	Added more selections for child restraint, airbags; to better address safety concerns related to occupant protection
CMV identification	Reduced	Streamline data entry by officers

Changes to the Form

Form Change	Notes
Separate Crash page	Consolidated the text fields and the crash part of Overlay A on to one page that covers all the data related to the crash itself
Separate Narrative/Diagram page	Set up a specific page, with a that can be distinguished from the others by a unique barcode, that will facilitate the capture of that data by the DOR system
Consolidated Vehicle main page	One vehicle per page makes more modular, clearer for officer data collection
Consolidated vehicle data page	The vehicle/driver related fields from Overlay A plus the data from Overlay C; eliminated those two overlays
Separate Non-Motorist page	One non-motorist per page makes more modular, clearer for officer data collection and more useful for data analysis
Eliminated the Fatal Supplement	Streamlines officer data collection; reduces redundancy, variations

Changes to the Manual

- Adapted to the new Data Model
- Adapted to the new Form

- Consolidated the definitions of key terms:
 - Reportable Crash
 - Fatality
 - Serious Injury
 - Reportable occupant

THIS PAGE LEFT INTENTIONALLY BLANK

GENERAL GUIDELINES

The DR3447 Legal Document

The Crash Report is a legal document, covered by Colorado Statute, and is a driver record.

- It is highly preferred that Crash Reports be entered, validated, and transmitted electronically to the Department of Revenue. Crash Reports submitted on paper are to be typed or legibly hand printed in blue or black ink; illegible entries cannot be entered into the Department of Revenue computer system.

- The state of Colorado State Traffic Records Advisory Committee (STRAC) has funding available to assist local and county municipalities with the purchase and deployment of electronic crash records systems that improve the timeliness and quality of the state's traffic crash data. More information regarding STRAC is available at:

<https://www.codot.gov/about/committees/strac>

including information regarding applying for STRAC funding, the grant-funding process and schedule, and grant application materials. Any law enforcement entity providing motor vehicle crash data to DOR is encouraged to apply for funding for electronic transmission of this data to DOR.

- By statute (42-4-1606), investigating officers are required to submit the report within five days of receiving information regarding the crash or upon the completion of their investigation. Every effort should be made to ensure that the report submitted to the Department of Revenue is complete.

- The original of all reports should be mailed to:

Department of Revenue
Motor Vehicle Division
Traffic Records Section
Denver, Colorado 80261-0016

- During the course of a crash investigation, it may become necessary to amend the original DR3447 and resubmit an amended crash report to DOR. If this is required, submit a completed copy of the DR3447 including all amended information to the address above at the Department of Revenue. Frequent reasons for amendments include, but are not limited to:
 - Solving a hit and run and including the name and address information for the hit and run driver,
 - The addition of fatality information for an individual who has died as a result of crash related injuries within a time window that makes the death a countable traffic fatality, or

- The district attorney's office adds additional charges that should be added to the DR3447.
- Copies of the report are available to parties of interest for a fee (will vary by department). Written requests should include the complete names of all drivers involved and the date of the crash. The request should be directed to:

Department of Revenue
Motor Vehicle Division
Traffic Records Section
Denver, Colorado 80261-0016

- The focus of the Crash Report is to provide information to analysts regarding the circumstances surrounding traffic collisions and to aid in the development of engineering, enforcement, and educational strategies for the reduction of traffic crashes and their related economic loss. It is also used for court cases/appearances, restraint actions, civil and criminal litigation, as well as the administration of driver's license regulations. The Department of Revenue uses this information to prepare statistics for State and Federal entities. Other users include attorneys, insurance companies, and private individuals who have a need for reliable traffic crash information.
- To determine which traffic crashes require that a DR3447 be sent to the Department of Revenue, use the guidelines in the next section of this manual.
- Crashes involving a fatality or serious injury require additional data collection above and beyond that required for other crashes. To determine which crashes require this additional data collection, use the guidelines in the next section of this manual.

Juvenile-Related Data

The DR3447 is a public record, and certain privacy and disclosure laws apply. On the other hand, Title 19 addresses juvenile records, and states:

§19-1-304(2) (a) **Law enforcement records in general--closed.** Except as otherwise provided by paragraph (b.5) of subsection (l) of this section and otherwise authorized by section 19-1-303, the records of law enforcement officers concerning juveniles, including identifying information, shall be identified as juvenile records and shall not be inspected by or disclosed to the public,

A juvenile is someone under the age of 18.

There are several exceptions, such as:

- To the juvenile and the juvenile's parent, guardian, or legal custodian;
- To other law enforcement agencies and to fire investigators who have a legitimate need for such information;
- To the victim and the complaining party, if different, in each case after authorization by the district attorney or prosecuting attorney;

In general, there are no specific concerns regarding the entry of data regarding juveniles in a crash report. However, it is recommended that an agency's legal counsel be contacted regarding the releasing records containing data on juveniles. Often that means that the juvenile's name and address should be redacted, but that other demographic data such as age or gender can be released. As a reminder, a check box has been added to the form to indicate that a juvenile (one or more) was involved in the crash).

Redacting is only needed if there's a public release. CSP takes the approach of redacting for public release.

NOTE: The above pertains to the DR3447: Charging documents represent a different issue entirely.

Completing the DR3447 Crash Report

This section of the manual provides a detailed explanation of how to complete the Investigator's Traffic Crash Report, **DR3447**. This section can be used in various ways. As a training tool for a new officer, it gives a step-by-step explanation of the whole report. As a resource tool for an experienced officer, it facilitates looking up the information in a specific field without having to read all the other material.

First, some general concepts are explained. Then, in the following sections, the DR3447 is broken down by page. First, an image of the page is shown, with each element on that page given a number. Then, a description of each element (identified by the same number) is given, along with an explanation (with a definition and/or description) as to what attribute should be entered for that element.

Criteria for a Crash to be Reportable

The **DR3447** is used to formally report only specific traffic crash events. This is not to say that agencies will not respond to other types of crashes. However, different (agency-specific) forms will be used in those cases.

If the answer to any of the following questions is "Yes", then the crash is reportable (i.e. A DR3447 crash report is required to be filled out and submitted to the Department of Revenue):

- Was anybody injured¹ or killed because of the crash?
- Did any of the drivers not have insurance?
- Did any of the drivers specifically request that a report be completed?
- Did any of the vehicles involved incur \$1,000 or more in damage² to all involved parties (including any lost, damaged, or spilled loads) as a result of the crash?
- Was alcohol or drugs (including marijuana) suspected of being involved in the crash?

¹ Note: A complaint of pain, classification 01 Possible Injury, is not classified as an injury for the purposes of this criteria.

² The \$1000 threshold can be met with relatively minor damage. If there is visible damage on any of the vehicles (or attached trailers) due to the crash, then it may well exceed \$1000.

Examples of reportable crashes

The following are examples of crashes that should be reported to the DOR on the DR3447 form:

- A collision between a motor vehicle in transport in the trafficway and any of the following:
 - A bicycle: The bicyclist in this case is both a vehicle (by state statute) and a traffic unit.
 - An ATV: The ATV rider in this case is not a vehicle (by state statute), but is a traffic unit, and should be listed as a non-motorist.
 - A snowmobile (driven on a trafficway): The snowmobile rider in this case is not a vehicle (by state statute), but is a traffic unit, and should be listed as a non-motorist.
 - A pedestrian on a personal conveyance. The personal conveyance rider in this case is not a vehicle (by state statute), but is a traffic unit, and should be listed as a non-motorist (pedestrian).
 - A pedestrian walking across the trafficway outside of a marked crosswalk: The pedestrian in this case is not a vehicle (by state statute), but is a traffic unit, and should be listed as a non-motorist (pedestrian)
 - A scooter with an engine over 49 cc: The scooter in this case is both a vehicle (by state statute) and a traffic unit.
 - A scooter with an engine 49 cc or less: The scooter in this case is not a vehicle (by state statute), but is a traffic unit, and should be listed as a non-motorist.
- A motor vehicle experiences tire failure and subsequently runs off the road and collides with a sign.
- Damage or injury resulting from a vehicle spilling its load, including rocks dropped off the back of an aggregate hauler that causes damage to the vehicle behind it, or treads causing damage to another vehicle during the process of a tire separation.

Exclusions

The following criteria indicate that the crash is NOT reportable:

- **Cataclysms:** The crash is not reportable if it resulted from an avalanche, earthquake, flood, landslide, falling rock, lightning, hail, tidal wave, tornado, or forest fire.
- **No motor vehicle in transport:** A crash is not reportable if it does not include a motor vehicle in transport. A motor vehicle in transport means that the vehicle is either in motion or stopped with the motor running.
- **Intent:** A crash is not reportable if it occurs as a result of an intentional action such as a criminal act or a suicide attempt, or an intentional (e.g. "Tactical Vehicle Intervention" or TVI/"Pursuit Intervention Technique" or PIT) maneuver by an officer.

- **Private property:** A crash is not reportable if it took place entirely on private property, such as a driveway, parking lot, parking garage, or on a private road in a trailer park or subdivision. A sidewalk maintained by a public entity such as a city roads department is not considered to be private property.
- **Road debris:** A crash is not reportable where there is only minor cosmetic (for example, damage by rocks that kicked up by tires).

Examples of non-reportable crashes:

- Crashes involving the following, but **NOT** involving a motor vehicle in transport regardless of injury or fatality:
 - A bicycle crash, even if it occurred on a trafficway,
 - A crash involving an ATV, driven on a trafficway,
 - A crash involving a snowmobile,
 - A crash involving a scooter under 49 cc.
- A cyclist collides with a parked vehicle.
- A crash involving an All-Terrain Vehicle (ATV)³ driven off-road, regardless of injury or fatality.
- A crash involving a snowmobile⁴, driven off-road, regardless of injury or fatality.
- A collision (even involving a motor vehicle) on a restricted airfield, such as DIA.
- A motor vehicle, driven off-road (i.e. not on a public right of way), collides with another vehicle.
- A rock falling from a mountain into traffic that strikes an oncoming vehicle.
- A motor vehicle sustains damage due to breaking an axle, blowing a tire, or separating a tread.
- A law enforcement officer performs a “pit maneuver” that results in the perpetrator’s vehicle crashing.
- A person commits suicide (or attempts to commit suicide) using a motor vehicle.

Guidance Regarding Intent

Regarding the “pit maneuver” or suicide (or attempted suicide), these are examples that begin as a deliberate, intended action. Any chain of events that begins as a deliberate action remains so until a break in the chain of causation occurs. Even if that unbroken chain of events results in an injury, fatality,

³ Non-reportable crashes involving an ATV should be reported on the Colorado State Parks Off-Highway Vehicle (OHV) Crash Report form.

⁴ Ditto for snowmobiles.

or involves another “innocent bystander” party, the crash remains non-reportable with respect to the DR3447 and the DOR.

Nonetheless, any injury or property damage should be reported on an agency’s General Offense report. Scene investigation remains the same with photos taken, measurements taken, etc.

If, however, a follow-on event occurs after the units involved have come to rest or control is regained, even if only seconds later, that follow-on event would be a reportable crash if the basic criteria from above is met.

For those events that are suspected to be a suicide but cannot be proven can be defaulted to a crash report. If there were any subsequent damage or injury of another vehicle or person, or property, then it would be considered a reportable crash. The intentional act is not a crash, but collateral damage would make it a reportable crash.

NOTE: In the event of a non-reportable crash, the crash report does not need to be (and should not be) submitted to the DOR. If by law a report needs to be completed, use an agency-specific report. Do not submit this report to Department of Revenue.

To determine which crashes are reportable, and which are not, the National Safety Council has produced an American National Standard for reference. The latest version of the ANSI Standard (*Manual on Classification of Motor Vehicle Traffic Accidents*) can be found on the NHTSA website. The most recent version can be downloaded from:

<ftp://ftp.nhtsa.dot.gov/fars/FARS-DOC/ANSI-D16.1-2007.Manual-On-Classification-of-Motor-Vehicle-Traffic-Accidents.pdf>

If it is not clear whether an incident qualifies as a reportable crash, and no other guidance is available, it is recommended that the incident be treated as a reportable crash and investigated as a crash on the DR3447. This crash report will be evaluated by traffic engineering coding experts at the Colorado Department of Transportation and the determination will be made if the crash is reportable at that time.

Entering A Person’s Name

On the form, for drivers, vehicle owners, damaged property owners, and non-motorists, the names are to be entered in a structured format. The name should be entered in three components, and following the rules regarding the characters that can be entered:

- First Name
 - Apostrophes (') are **NOT** accepted
 - Hyphens **ARE** accepted
- Middle Initial
 - If the person has more than one middle name, enter both initials.
- Last Name

- Apostrophes (') are **NOT** accepted
- Hyphens **ARE** accepted

NOTE: For other name fields, such as officer name, approving supervisor name, and vehicle occupant name, the above structure need not be followed.

Examples

Note: In the examples, quotes are shown only to clarify the string to enter: They should not be entered.

- The last name O'Connor must be entered as "OConnor".
- A hyphenated last name such as Rodriguez-Sanchez can be entered as "Rodriguez-Sanchez".
- Boutrous Boutrous-Ghali (the deceased UN General secretary) would therefore be entered as "Boutrous" in the first name field, and "Boutrous-Ghali" in the last name field.
- If the family name is not the last name (such as with many oriental cultures). For example, with the name Chou Ri-Jen, Chou is actually the family name, and Ri-Jen are the given names. In this case, enter "Ri-Jen" as the first name field, and "Chou" as the last name field.
- In some cultures, family names can have multiple components without hyphens (e.g. Lopez Martinez). In this example, enter "Lopez Martinez" in the last name field.
- Some cultures have very long names. An example would be Muhammad bin Ameen Abu Kareem al-Farsi. In this example, enter "Muhammad" in the first name field, and "bin Ameen Abu Kareem al-Farsi" in the last name field.

A driver is the person who is in actual physical control at the time of the crash.

The investigating officer should confirm name, address, and age of involved parties by asking them. Do not rely solely on the information given on a driver's license or registration.

What Constitutes a Crash Fatality?

A fatality occurs when a person⁵ dies within 30 days of the crash date as a result of injuries sustained in the crash. Every state receiving federal highway funds has federal reporting requirements to provide detailed information regarding fatal crashes and each fatality involved to the National Highway Traffic Safety Administration (NHTSA) Fatal Analysis Reporting System (FARS) in order to maintain this funding. NHTSA requires additional data above and beyond that collected on other crashes for the reporting of fatal crashes to the FARS system.

Examples of what constitutes a crash fatality:

⁵ A person is any living human. Within the context of a crash report, a fetus is considered to be part of a pregnant woman rather than a separate individual.

- A person is dead at the scene due to injuries sustained because of the crash.
- A person dies in a hospital (or even at home) due to injuries sustained because of the crash, within 30 days of the crash.

Examples of what DOES NOT constitute a crash fatality:

- If a person dies from a disease or complications while in the hospital following the crash. A follow-on death is not considered a crash-related fatality.
- A still-birth after the crash. A person must be born prior to the crash to be classified as a fatality.
- A person dies in a hospital due to injuries sustained because of the crash, 31 days of after the crash. The time limit to be considered a crash fatality is within 30 days of the crash.
- An individual survives the crash but wanders in cold weather to find help and dies of hypothermia. Fatal injuries must be caused by the crash, not other causes. A follow-on death is not considered a crash-related fatality.
- A person who has a heart attack while behind the wheel and dies of non-crash related injuries. Death must be due to crash-related injuries. Other causes of death while an individual is driving are not considered crash-related fatalities.
- A person is involved in a crash which results in the vehicle falling into a river. The person climbs from the vehicle but is swept away by the current and drowns.

Fatal-Only Section of the Form

Several sections of the DR3447 crash form need only be filled out in the event of a fatality. On the form, these sections will be outlined by a wide black border, with directions given as white text within the border. An example of such a section is shown below.

TO BE FILLED OUT ONLY IN THE EVENT OF A FATALITY					
EMERGENCY MEDICAL SERVICES (Record all time using 24 Hr. time)			TRAFFIC CONTROL DEVICE FUNCTIONING		
Time Notified	Time Arrived @ Scene	Time Arrived @ Hospital	<input type="checkbox"/>	01. No Controls	04. Functioning Properly
			<input type="checkbox"/>	02. Not Functioning	06. Not Visible
			<input type="checkbox"/>	03. Functioning Improperly	05. Unknown
If times are unknown provide name of responding services:					

Fatal-Only Section of the Manual

Sections of this manual that pertain to such “fatal only” elements will be highlighted with wide vertical bars as added here.

These sections must be completed whenever a crash involves a fatality, defined as when a person* dies within 30 days of the crash date as a result of injuries sustained in the crash. Any crash involving a delayed death must be amended to provide the required fatality data for each fatality involved in the crash, and resubmitted to DOR for NHTSA FARS coding.

Fatal Blotter

The FARS program requires crash fatalities to be reported to NHTSA within 24 hours. Since these deaths must be reported before the crash investigation can reasonably be completed, fatality data must be reported in the Colorado Fatal Crash Early Notification Report, or **Blotter**. Once this blotter has been filled out, it should be submitted via email to the CDOT FARS Program email addresses listed at the bottom of the blotter page.

The most recent blotter form is downloadable at the following URL as a Microsoft Word document file:

https://www.codot.gov/library/traffic/safety-crash-data/fatal-crash-data-city-county/Fatal_Blotter_Template.doc/view

NOTE: Any reportable traffic crash fatality (as per the criteria above) must be reported immediately via the **Blotter** submittal.

What Constitutes a Serious Injury

More detailed information regarding crashes involving serious injuries is necessary because:

- The number of these crashes are increasing as safety features on newer vehicles prevent outright fatalities;
- There is oftentimes a fine line between a person being killed or seriously injured in a traffic crash, and
- Serious injury crashes result in extreme hardship to the person involved as well as his/her family, employer, and friends.

Thus, there is more and more emphasis on performance measures covering both fatal and serious injury crash counts for both traffic safety engineering and enforcement efforts.

The federal requirements have recently evolved, and the State will soon be required to a) report progress in reducing fatal and serious injuries (and rates), and b) align with the national definition of serious injury as per MMUCC. With that in mind, the injury severity definitions have been changed in the DR3447. Also, some fields of the person-related data are to be filled out for either a fatality **or** a serious injury.

Serious Injury/Fatal-Only Section of the Form

The portion of the overlay covering those fields is highlighted with a wide grey border, as shown below. These sections must be completed whenever a crash involves a serious injury or suspected serious injury.

EMS Trip #	Taken To
------------	----------

Serious Injury/Fatal-Only Section of the Manual

In this manual, the sections relative to that portion of the form is highlighted with the grey vertical bars as shown here.

The definition of a suspected serious injury crash is when the most severe injury incurred by any person involved in the crash meets the criteria of 03. Suspected Serious Injury.

In general, what Law Enforcement officials often refer to as a Serious Bodily Injury (or SBI) would essentially refers to an injury that would meet the criteria for being a Serious Injury.

In general, what Law Enforcement officials often refer to as a Serious Bodily Injury (or SBI) refers injuries defined in CRS 18-8-901(3)(p):

“Serious Bodily Injury” means bodily injury which, either at the time of the actual injury or at a later time, involves a substantial risk of death, a substantial risk of serious permanent disfigurement, a substantial risk of protracted loss or impairment of the function of any part of or organ of the body, or breaks, fractures, or burns of the second or third degree. In most cases, medical personnel will make the determination based on their expert opinion regarding whether one or more injuries to an individual involved in a crash constitute serious bodily injuries. For example, the Colorado State Patrol records medical opinions regarding the presence of a serious bodily injury on an internal agency form for inclusion in the crash case file as opposed to directly making the determination as to whether a serious bodily injury was present in the crash

That definition also aligns with the MMUCC definition for a Suspected Serious Injury:

Suspected Serious Injury (A): A suspected serious injury is any injury other than fatal which results in one or more of the following types of injuries:

- Severe laceration resulting in exposure of underlying tissues/muscle/organs or resulting in significant loss of blood
- Broken or distorted extremity (arm or leg)
- Crush injuries
- Suspected skull, chest or abdominal injury other than bruises or minor lacerations
- Significant burns (second and third degree burns over 10% or more of the body)
- Unconsciousness when taken from the crash scene
- Paralysis

Note: A diagram must be completed for any crash involving a serious injury or suspected serious injury.

TRAFFIC CRASH REPORT INSTRUCTIONS

Overview of the DR3447 Crash Form

Components of the DR3447 form:

- MAIN CRASH REPORT PAGE (Page A)
- NARRATIVE/DIAGRAM (Page B)
- MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C)
- TRAFFIC UNIT/GENERAL VEHICLE AND CMV (Page D)
- TRAFFIC UNIT/NON-MOTORIST (Page E)
- ADDITIONAL MOTOR VEHICLE OCCUPANTS (Optional Supplement A)
- ADDITIONAL DAMAGED PROPERTIES (Optional Supplement B)
- INVOLVED PERSON OVERLAY (Overlay A)

The DR3447 Crash Report Package

Officer notes or agency-generated supplemental documents are not covered by this document and should not be submitted to the Department of Revenue.

Any additional pages should be stapled securely to the **DR3447** before it is submitted to the Department of Revenue. When sequencing the pages, the following order should be used:

- The first page is always the MAIN CRASH REPORT PAGE (Page A)
- The second page is always the NARRATIVE/DIAGRAM (Page B)
- The appropriate Traffic Unit pages follow in order of their Traffic Unit #:
 - MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C) and TRAFFIC UNIT/GENERAL VEHICLE AND CMV (Page D) and/or
 - TRAFFIC UNIT/NON-MOTORIST (Page E).
- If an ADDITIONAL MOTOR VEHICLE OCCUPANTS (Optional Supplement A) is needed, that goes next.
- If an ADDITIONAL DAMAGED PROPERTIES (Optional Supplement B) is needed, that goes next.

- Any agency generated supplements or officer notes go last.

NOTE: Do not attach INVOLVED PERSON OVERLAY (Overlay A) to the crash report package submitted to the DOR.

All the DR3447 pages must be numbered sequentially, starting with 1 for the Crash Page, 2 for the Narrative/Diagram page, 3 for the most at-fault Traffic Unit page (Vehicle or Non-Motorist), and so on through the rest remaining of the DR3447 pages. Each individual page number should be entered instead of the **X** in the field as shown:

Page **X** of ___ Pages

The total number of pages should be added in the appropriate place on all pages of the report replacing the **T** in the *Page of Pages* field as below:

Page X of **T** Pages

Examples

- A crash involves a pickup, an SUV, and a bicyclist. The driver of the pickup rear-ended the SUV, which then swerved into a bicyclist. The crash report package for this event would be made up of the following pages (with their page references):
 1. MAIN CRASH REPORT PAGE (Page A)
 2. NARRATIVE/DIAGRAM (Page B)
 3. MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C) for the pickup (the most-at-fault vehicle)
 4. TRAFFIC UNIT/GENERAL VEHICLE AND CMV (Page D) for the pickup
 5. MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C) for the SUV
 6. TRAFFIC UNIT/GENERAL VEHICLE AND CMV (Page D) for the SUV
 7. TRAFFIC UNIT/NON-MOTORIST (Page E) for the bicyclist

Manual Conventions

The term **field** is the term used to refer to a piece of data that is to be collected. (The national standard – the Minimum Model of Uniform Crash Coding, or MMUCC – calls it a “data element”).

The type of data entered into each field can be:

- **Text** such as a name, license plate number, etc.
- **Number**, typically a count, such as the number of vehicles involved.

- **Code**, used to indicate a selection from a list, such as the examples below. The code is generally two digits (often with a leading zero), but may also be a letter (used for occupant protection equipment; such as seat belts and air bags).
- **Select a code**, meaning to enter the code corresponding with the appropriate item on the list into the code box.
- **Enter an “X” or “✓”**, used for check boxes, though any mark that indicates that check box has been selected – such as a check or even filling in the box – is sufficient.
- **Enter**, generally means to enter the appropriate text (letters and/or numbers) into a text field.

The following example list of letter codes applies to field **F1-Safety Equipment – Available MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C)**.

Table 1: Example list of letter codes

Code (Letter)	Selection
A	None
B	Shoulder and Lap Belt
C	Shoulder belt only
D	Lap belt only
H	Child Restraint - Forward Facing
I	Child Restraint - Rear Facing
J	Child Restraint - Type Unknown
K	Booster Seat
F	Not Applicable

NOTE: In the above table, the codes are not in order, because of the following conventions:

- When a code has been deleted (e.g. E-Child Safety Restraint, which was expanded to distinguish between rear facing and forward facing), that code was not reused.
- When new codes were added, the existing codes were not reassigned.
- In general, the codes for not applicable, other, or unknown (when included) are placed at the end of the list.

The following example list of digit codes applies to **field F2-Safety Equipment Used (Motorized Traffic Unit/Occupants (Page C))**.

Table 2: Example list of 2-digit codes

Code (2-digit)	Selection
00	Not used
01	Properly used
02	Improperly used
03	Unknown

Form Field Numbering

For the purposes of this document, in order to clearly identify the portion of the form being described, the fields are identified as follows, preceded with the word “**Field**”, with a number that matches the number that corresponds to the field on the sample page of the form, and with the name of the field (as it appears on the form):

Field 1: Example Field to be Entered

Traffic Unit Number

A Traffic Unit/Vehicle page shall be filled out for each vehicle involved in the crash, and the appropriate Traffic Unit # assigned to that page. A traffic unit is a motor vehicle or a non-motorist involved in the circumstances of a traffic crash. Traffic units are numbered sequentially, starting with 1.

A Traffic Unit/Non-Motorist page shall be filled out for each non-motorist involved in the crash, and the appropriate Traffic Unit # assigned to that page

Traffic Unit #1 should be assigned to either the non-motorist or the vehicle whose driver is cited (or could have been cited) for a motor vehicle law violation that contributed to the crash. A drunk bicyclist or a pedestrian not in a crosswalk would be examples of an at-fault non-motorist.

If more than one driver is cited for a violation that contributed in some way to the crash, either party may be listed in this field. If nobody is cited or could have been cited as a result of the crash, either party may be listed in this field.

Enter the appropriate Traffic Unit # on all Traffic Unit/Vehicle and Traffic Unit/Non-Motorist pages that make up the crash report. Use each Traffic Unit # for only one page per crash report.

Example

For example, a sedan collides with a pedestrian who is legally crossing in a crosswalk, and then collides with a pickup that is parked at the curb.

- The sedan would be Traffic Unit #1: A MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C) and a TRAFFIC UNIT/GENERAL VEHICLE AND CMV (Page D) would be filled out for the sedan, and those pages would be tagged as TU#1.

- The pedestrian would be Traffic Unit #2: A TRAFFIC UNIT/NON-MOTORIST (Page E) would be filled out for the pedestrian, and would be tagged with TU#2.
- The pickup would be Traffic Unit #3: A MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C) and a TRAFFIC UNIT/GENERAL VEHICLE AND CMV (Page D) would be filled out for the pickup, and those pages would be tagged as TU#3.

MAIN CRASH REPORT PAGE (Page A)

This page is for information regarding the overall crash.

In a DR3447 package, there will be one and only one copy of this page, and it will always be the first page.

Header Fields

This section covers the common information that is at the top of all or most pages in the DR3447 form.

Field 1: Page 1 of ___ Pages

PAGE 1 OF PAGES

The crash report package should be assembled as per the instructions in the section on **The DR3447 Crash Report Package** on page 17 of this manual).

Once the package is complete, enter the total number of pages in the blank.

Business Rules

This page is always page one of the crash report package, and is always “paired” with Page B.

Field 2: Case Number

Case #

Follows the convention of the individual law enforcement agency that is originating the crash report. Must be unique for each crash. The only time a crash report from an agency should have the same case number as a previous report is for an amended report.

Electronic Reporting

- This field could be auto-populated with an automatically incrementing number.

Field 3: (Law Enforcement) Agency ORI

Change(s):

- New header field

Rationale:

- A unique identifier without the issue of “free text” (when entered as free text, the Agency Name results in a wide variety of spellings for the same agency).

Agency ORI

Enter the ORI (Originating Agency Identifier) code for the reporting officer’s agency.

Guidance

- The ORI codes are from the official list (as managed by CBI).
- Some agencies may have more than one ORI to distinguish different sections within the agencies.
- NOTE: While Colorado State Patrol has more than one ORI for the different troops, an internal decision was made that CSP will use only one ORI for crash reports.

Electronic Reporting

- It is expected that this field (as well as the (Law Enforcement) Agency Name field) would be auto-populated based on the officer completing the report.

Field 4: (Law Enforcement) Agency Name

Agency Name

Enter the full name of the reporting agency, matching the “official name” of the agency on the ORI list.

Electronic Reporting

- It is expected that this field would be auto-populated based on the value entered as the Agency ORI.

Crash Type Check Boxes

Field 5: Amended/Supplemental Form Check Box

AMENDED/SUPPL.

Mark this box (enter an “X” or ✓) if this is an amended report.

Note: In order to link an amended report to the original, the amended report the following two fields **must** match the original:

- The investigating agency’s ORI
- The investigating agency’s case report number

Together, these two items act as the unique identifier of the crash.

Guidance

Amendments are frequently made for the addition of fatalities, so all fatality information in association with the individual who is now deceased is required. All data that previously existed in the original report should be provided in addition to the additions with the amendment with fatalities:

- The Date of Report on an amended report must be the date the amended report is filed, not the date of the original report.
- A description of what information was added or corrected with this supplemental or amended report should be added to the narrative. If for no other reason, it might be helpful 5 to 10 years down the road when testifying in the civil trial to have a good explanation of what was changed and why. Such information will help made to make testimony easier: At the time of the change, the changes will make perfect sense but they may not be so clear years later, or to another reader.
- For similar reasons, the date the report was amended should also be included.
- Both the date and the reason for the amendment should be noted in the narrative for **each and every** amendment to the report. . If there are multiple amendments, consolidate all reasons for amendment on the report with the most recent report date.

Field 6: Counter Report Check Box

COUNTER REPORT

Mark this box (enter an “X” or ✓) if the crash is not investigated by a law enforcement agency and the **DR3447** is completed by one or more of the parties of interest (drivers or property/vehicle owners).

This is most commonly used during “Crash/Accident Alert” conditions, which are issued by a law enforcement agency when conditions (typically weather events) overwhelm agency resources to respond to a crash in a reasonable amount of time.

If an officer takes information and completes a report, it is not a counter report. However, some agencies will enter an officer's name and badge number on a counter report for data entry purposes. This is still considered a counter report and this box should be checked.

If an officer at a station takes information from involved parties at a police facility, that is considered a “Counter Report” since no scene investigation is going to be made, and the officer generally doesn’t write a citation in this circumstance. The officer taking the report is typically performing a courtesy for the parties who have come to the station to report the crash, who cannot make the report on-line, and who prefer not to complete a handwritten paper report. Sometimes the officer or clerk is simply transcribing the information given by the reporting party as a courtesy.

A “Counter Report” includes any report completed by one or more of the parties of interest (drivers or property/vehicle owners), on line or on paper, or any report entered by an officer or report taker at a police facility, in person or by telephone, as a courtesy for the reporting party and there is neither an expectation of a crash investigation nor issuance of a citation.

NOTE: Counter reports may also be filed online using the following link:

<https://www.colorado.gov/pacific/csp/crash-information>

Field 7: Private Property Check Box

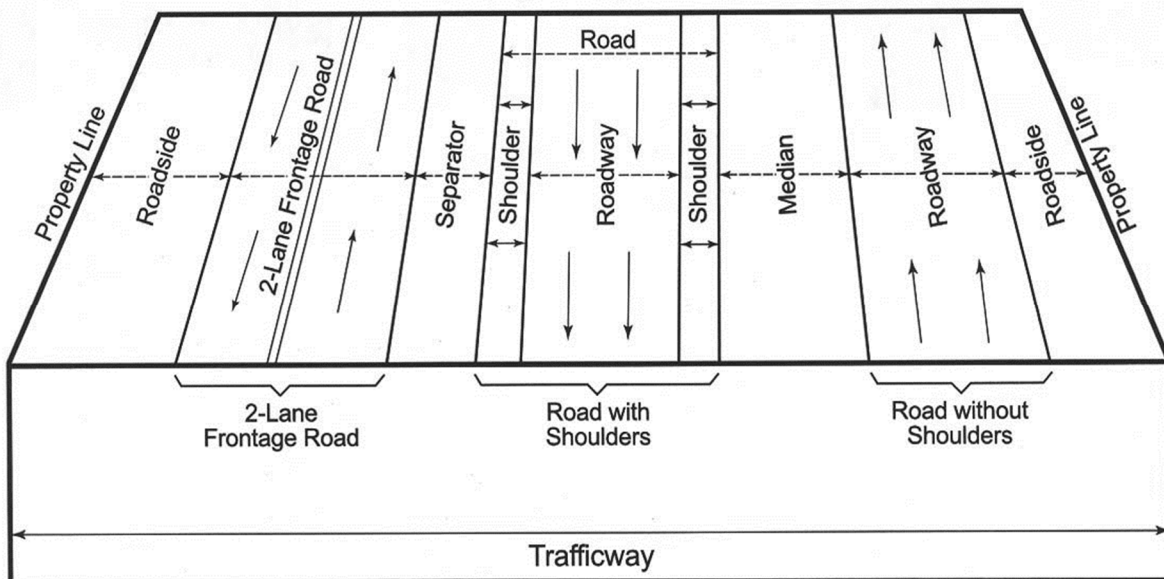

PRIVATE PROPERTY

Mark this box (enter an “X” or ✓) if a crash occurs and is entirely contained within a location that is considered private property.

- Crashes that begin on a public trafficway and end within a location that is considered private property are NOT private property crashes and this box should not be checked.
- **Regardless of the first harmful event, when a crash involves a public roadway or highway (i.e., ran off the road on to private property), the crash is not to be considered a private property crash and the report must be completed per the general report instructions.**
- Crashes involving pedestrians with a point of impact on a publicly maintained sidewalk are NOT private property crashes, and this box should not be checked.

Private property is property that is not included in the trafficway. Since private property is not maintained or regulated by state or local transportation departments, do not submit private property crash reports to DOR. Private property includes gated communities and other subdivisions that maintain their own roadways. Private property crash reports are to be kept at the local level for individual agency use.

Figure 2: Trafficway Diagram

Reporting private property crashes will be determined by individual agencies. In the case of a fatal crash taking place on private property, a Blotter must be filled out and submitted to the Colorado FARS program, even if the crash takes place on private property and is therefore not countable.

Field 8: Public Land Check Box

Change(s):

- New

Rationale:

- To indicate if the crash occurred on public land (other than city or county roads or state/national highways).

PUBLIC LAND

Mark this box (enter an “X” or ✓) if a crash occurs within a location that is considered public land, such as BLM (Bureau of Land Management), National Forest, National or State Parks.

Guidance

NOTE: Crashes that do not begin on, end on, or otherwise involve a trafficway even if the crash occurs on public land, are NOT reportable crashes.

Crash Date/Time Fields

Field 9: Date of Report

Date of Report (MM/DD/YYYY)

Enter the date on which the investigating officer completed the report. If this is an amended or supplemental report, enter the date that the new report was completed.

Use the format **MM/DD/YYYY** to fill in this field. **Example:** 05/08/2018

- It is expected that this field would be auto-populated, based on the date at which the crash report is submitted by the officer.

Field 10: Date and Time of Crash

Date of Crash (MM/DD/YYYY)	Time of Crash (24 Hour)
----------------------------	-------------------------

Enter the date and time at which the traffic crash occurred. This may differ from the date and time of the report. If the date and time of the traffic crash is unknown, enter the date and time the crash was discovered. If a discovered date and time is used instead of an actual, that should be noted in the narrative.

Guidance

- If crash investigation determines a likely date and time of crash, note the investigator’s determined date and time in the crash narrative.

- Unless the date and time of crash is known with certainty, enter the date and time of discovery in this field of the crash as the date and time.

Enter the date using the format MM/DD/YYYY to fill in this field.

Example: 05/08/2018

Enter the time using the 24-hour clock system. Do not use a colon.

Example: If a crash occurred at 2:43 PM, the time would be entered as “1443”.

To convert standard time to the 24-hour clock system, simply add 12 to any hour past 1:00 p.m. For example, 1:00 p.m. equals 1300 military time (1:00+12:00=1300), similarly 10:05 p.m. equals 2205 military time (10:05+12:00=2205).

Midnight is entered as 0000 and noon is 1200.

If investigation of the crash results in an estimated time of crash, do NOT use this estimated crash time as the crash time. Note the estimated time of crash in the narrative, and use the discovered date and time of crash, also noting this in the narrative.

NOTE: The date and time entered here by the officer is considered approximate and may not be precise.

Field 11: Date and Time Arrived

Change(s):

- New

Rationale:

- To help reduce the impact of secondary crashes by identifying instances of high response time

Date Arrived
Time Arrived

Enter the date and time at which the investigating officer arrived on the scene. If appropriate, obtain the date and time from dispatch. Otherwise, estimate to the best of your ability. If no on-site investigation was performed, leave blank.

Enter the date using the format MM/DD/YYYY.

Enter the time using the 24-hour clock system. Do not use a colon.

NOTE: The date and time entered here by the officer is considered approximate and may not be precise.

Field 12: Date and Time Roadway Cleared

Change(s):

- New

Rationale:

- To identify locations where crashes with long clearance time occur frequently. When such locations are identified, corrective actions can be taken to help reduce the clearance time for those crashes.

Date Roadway Cleared
Time Roadway Cleared

Enter the date and time at which the roadway was considered cleared as per definition below.

Enter the date using the format MM/DD/YYYY.

Enter the time using the 24-hour clock system. Do not use a colon.

Definition

Cleared means when:

- All lanes of traffic are available for traffic are open and traffic is flowing, and
- All vehicles have been removed (from the roadway).

It is not necessary that all parties, including the investigating officer have left the scene for the roadway to be considered cleared.

NOTE: The date and time entered here by the officer is considered approximate and may not be precise.

Field 13: Date and Time Last Responder Left

Change(s):

- New

Rationale:

- To identify locations where crashes that require long-duration responder activity occur frequently. When such locations are identified, corrective actions can be taken to help reduce the clearance time for those crashes.

Date Last Responder Left
Time Last Responder Left

Enter the date and time at which the last responder left.

Enter the date using the format MM/DD/YYYY.

Enter the time using the 24-hour clock system. Do not use a colon.

Guidance

If the person filling out this form was not the last responder to leave the scene, then the date and time when the last responder left should be estimated.

NOTE: The date and time entered here by the officer is considered approximate and may not be precise.

Officer Fields

Field 14: Officer Name

Officer Name

Print the name of the investigating officer completing this report. Entering only the last name is acceptable.

Field 15: Officer Number

Officer Number

Enter the identification or badge number of the investigating officer completing this report.

Field 16: Signature

Signature

Enter the signature of the investigating officer completing this report.

Electronic Reporting

The signature field will not be loaded into the DR3447 repository at the DOR. Each law enforcement agency can implement the electronic signature however it is decided between the agency and their vendor.

Field 17: Detail

Detail

This field is available for use by each individual agency.

Ask your own agency contact for directions on how you should use this field for your agency.

Field 18: Agency Code

Agency Code

This field is available for use by each individual agency. It may be used to indicate a complaint number, or any other information the agency finds helpful for filing or identifying crash reports.

Ask your own agency contact for directions on how you should use this field for your agency.

Field 19: Investigated At Scene Check Box

Investigated at Scene <input type="checkbox"/>

Mark this box (enter an "X" or ✓) if the investigating officer responded to the scene of the crash. Leave this blank if the investigating officer did not respond.

If a crash is not investigated at the scene, no diagram is required. Cold, counter, and desk reports are usually not investigated at the scene.

Field 20: District Number

District Number

For individual agency use. Ask your own agency contact for directions on how you should use this field.

Summary Fields

Field 21: Number Killed

Number Killed

Enter the count of persons killed in the crash. If there were no fatalities, a numerical zero (0) must be entered. For any crash where number killed is more than 1, ensure the correct fatality fields are filled out throughout the DR3447 package.

Electronic Reporting

- It is expected that this field would be auto-populated, based on the number of persons (non-motorists or occupants) that have an injury classification of 04. Fatal Injury.

Field 22: Number Injured

Number Injured

Enter the count of persons exhibiting evident injury, where the entry in the injury severity (on the Traffic Unit/Vehicle, Traffic Unit/Non-Motorist, or Additional Occupants pages) is **02. Suspected Minor Injury** or **03. Suspected Serious Injury**. People killed (entered as **04. Fatal Injury**) should not be included in this count.

Injuries entered as **01. Possible Injury**, should not be included in this count⁶. If there were no evident injuries, a numerical zero (0) must be entered.

NOTE: See the injury severity definitions on page 117.

⁶ While MMUCC (4th edition) calls for *Possible Injury* severities to be counted in this total, the *Possible Injury* severity is excluded from this count on the DR3447 to stay consistent with the method of counting that has been in place in Colorado since 2006.

Electronic Reporting

- It is expected that this field would be auto-populated, based on the number of persons (non-motorists or occupants) that have an injury classification of 02. Suspected Minor Injury or 03. Suspected Serious Injury.

Field 23: Total Vehicles

Total Vehicles

Enter the count of the total number of vehicles involved in the crash.

Electronic Reporting

- This field may be auto-populated, based on the number of Motorized Traffic Unit/Occupant pages that were completed for the crash.

Field 24: Total Non-Motorists

Change(s):

- New field

Rationale:

- Summary number to more easily identify crashes involving non-motorists, since there is a growing number of crashes involving vulnerable pedestrians and bicyclists.

Total Non-Motorists

Enter the count of the total number of non-motorists involved in the crash.

Guidance

See **Field 21: Non-Motorist Type** on page 157 for various types of non-motorists that need to be included.

Electronic Reporting

- This field may be auto-populated, based on the number of Traffic Unit/Non-Motorist pages that were completed.

Field 25: Juvenile(s) Involved Check Box

Change(s):

- New field

Rationale:

- To indicate that there is information in the crash report relative to a juvenile, in which case specific privacy laws apply

Juvenile(s) Involved <input type="checkbox"/>
--

Mark this box (enter an “X” or ✓) if one or more juveniles (under the age of 18) were involved in the crash,

Title 19 requires law enforcement records containing Juvenile information to be clearly marked as such. As crash forms fall under Title 19 requirements (a majority of the documents are created by a law enforcement agency) and thus must be marked appropriately prior to transmission to DOR.

Business rules

- This check box could be automatically checked based on the dates of births of the various involved parties. If any person’s age is less than 18 years old (i.e. the current date minus the DOB is less than 18 years) for any of the individuals listed (on a Motorized Traffic Unit/Occupant page, a Traffic Unit/Non-Motorist page, or an Additional Occupants page), then this box can be checked automatically.

Field 26: Secondary Crash Check Box

Change(s):

- New

Rationale:

- To identify locations where secondary crashes (crashes that follow onto previous crashes or other repetitious incidents) occur frequently. When such locations are identified, corrective actions can be taken to help reduce those secondary crashes.

Secondary Crash <input type="checkbox"/>

Mark this box (enter an “X” or ✓) if the crash is considered a secondary crash.

Definition

A secondary collision is defined as a crash occurring within an incident scene area or within a traffic queue, including the opposite direction, resulting from an original incident.

The original incident does not have to be a collision; it could be a disabled motorist, vehicles on the side of the road, or any other unusual circumstance related to traffic backup or change in traffic flow as long as it played a role in distracting the driver or the causation in the collision. If the queue is normal, everyday occurrence without an original unplanned incident then a crash is not secondary.

Examples

The following crashes would be considered secondary crashes:

- A crash has occurred in the southbound lanes of I-25, and the traffic in the northbound lanes have slowed down as drivers look over at the activity. A fast-moving vehicle doesn't see the slow down and rear-ends a slower-moving vehicle at the tail end of the queue.
- Heavy snow is falling on a stretch of a two-lane highway causing vehicles to slow down. Upon reaching the beginning of a passing lane, one driver tries to pass the slower-moving vehicles, loses traction, and crosses into oncoming traffic.
- When slow-moving trucks are pulling out of a chaining station during a snowfall, and the differences in vehicle speeds contributes to a crash occurring.

Field 27: Construction Zone Related Check Box

Construction Zone Related <input type="checkbox"/>

Mark this box (enter an "X" or ✓) if the crash occurred in a construction zone.

A construction zone is defined as any location where roadwork (construction or maintenance, not to include plowing or mowing) is in progress or where traffic control devices (orange and black signs, barricades, or cones) designate a construction/work zone.

Note: There does not need to be any person working at the site for the area to be designated a construction zone.

Field 28: School Zone Check Box

Change(s):

- New

Rationale:

- To support studies of school transportation-related crashes.

School Zone	<input type="checkbox"/>
----------------	--------------------------

Mark this box (enter an "X" or ✓) if the crash occurred in a school zone.

"School Zones" are zones near or at a school which exist during months and hours when zone signing is in effect. Flashing school zone speed limits or school zone sign may be present on the road that designates the edges of the school zones.

The Crash Location

Change(s):

- Intersection Offset (unit, distance, direction) and Milepoint Offset (unit, distance, direction) are separated to make it clearer to the officer which fields go together make up a set.
- Latitude and Longitude are clarified: expect decimal degrees, expect 5 significant digits (after the decimal point), and the N and W are added, and the minus sign for negative Longitude is added
- Added OTHER RDWY

Rationale:

- Location is a very important piece of crash data, and there have been many issues with crash location in the past.

The Crash Location is defined as ***the location of the crash is where the First harmful event of the crash occurred.***

Noting the precise location of a crash is very important, as information is used to identify locations that warrant improvements (to the roadway, the intersection, etc.). Each year, millions of dollars are spent to improve roadway safety, and it is imperative that those improvements are made at the locations where they would have the most benefit in terms of crash reduction.

The goal is to geo-locate the crash. This means having a computer-understood location that allows computer processing to be performed on the crash data (e.g. to find hot spots).

Guidance

- There are three different methods that are available to you to specify the crash's location:
 - GPS Coordinates (Lat/Long)
 - Route and Milepoint, and appropriate offset
 - Intersection, and appropriate offset
- In general, two different location methods are preferred in order to be certain that the crash is correctly geo-located.

- NOTE: Latitude/Longitude (Lat/Long) coordinates are the most highly desirable, as a GPS location is the most direct approach to geo-locating the crash. However, it is important to take care when entering the coordinates, as missing or swapped digits could locate the crash in the Pacific Ocean.
- If Lat/Long coordinates are not entered on the crash form, then it is imperative that either an intersection/offset location is entered, or a route/milepoint/offset location is entered. Otherwise, the crash cannot be properly geo-located for useful analysis.

Field 29: Latitude/Longitude

Change(s):

- Increased emphasis
- Showing the data format (decimal degrees) and the number of digits

Rationale:

- GPS (Lat/Long) coordinates are extremely useful to specifically identify where the crash occurred.

Latitude ____.____.____.____.____ °N	Longitude - _____.____.____.____.____ °W
---	---

The Latitude and Longitude are to be entered in a format called **decimal degrees**, meaning that the degrees are entered with 5 decimal points. The standard used is the WGS 84 Coordinate System (R2S5-86). **DO NOT USE Degrees Minutes Seconds.**

Examples

- The latitude and longitude of the intersection of US 287 (College Ave) and Horsetooth in Fort Collins is 40.53806 and -105.07683
- The latitude and longitude of the intersection of W Colfax Ave and Pierce St in Lakewood is 39.74031 and -105.07201

The GPS device used to identify the coordinates should be configured to use the WGS 84 Coordinate System (R2S5-86).

Field 30: County

County

Enter the name of the county of where the crash occurred. Use the name as given in Appendix A.

Field 31: City

Enter the appropriate city or town name if the crash occurred within incorporated limits.

Field 32: On Road/Street (Name)

Change(s):

- Emphasis on structured name entry

Rationale:

- Make it easier for analysts to geo-locate the crashes, which is critical to safety analyses

This field is the roadway name where the crash happened.

Guidance

- For a crash on a roadway segment, this is the name of the roadway.
- For a crash in an intersection, this is the name of the roadway on which Traffic Unit 1 was traveling before entering the intersection.
- If the roadway is a state highway, enter the highway number (e.g. CO 67)
- Otherwise enter the roadway name (e.g. GOLDEN GATE CANYON RD)
- The standard roadway name suffixes are shown below:

Table 3: Road Type Abbreviations

Suffix Type	Suffix Description
ALY	Alley
ALT	Alternate
AVE	Avenue
BLVD	Boulevard
BUS	Business
BYP	Bypass
CTR	Center
CIR	Circle
CLB	Club
CONN	Connector
CT	Court
CV	Cove
XING	Crossing
DR	Drive
EST	Estate
EXT	Extension
GLN	Glen
HTS	Heights
HWY	Highway
LN	Lane
LOOP	Loop
MDWS	Meadows
OVLK	Overlook
PARK	Park
PKWY	Parkway
PASS	Pass
PATH	Path
PL	Place
PLZ	Plaza
PT	Point
RAMP	Ramp
RD	Road
RTE	Route
ROW	Row
RUN	Run
SPUR	Spur
ST	Street

Suffix Type	Suffix Description
TER	Terrace
TRCE	Trace
TRL	Trail
TPKE	Turnpike
VIA	Viaduct
VW	View
WALK	Walk
WAY	Way

Electronic Entry

To help facilitate convergence on the spelling of roadway name suffixes, the above table can be used as a lookup table for the suffixes when building the roadway name. (Also preferred is the use of the eight cardinal direction abbreviations – N, NW, W, SW, S, SE, E, NE – for prefix or suffix directions.)

(Reference: US Postal Service Street Suffix Abbreviations, https://pe.usps.com/text/pub28/28apc_002.htm)

Field 33: Reference/Intersecting Road/Street (Name)

Reference Intersecting Road/Street:

For a crash at an intersection, this is the name of the cross-street of the intersection at which the crash occurred.

If the crash did not occur at an intersection, it is extremely helpful to identify the nearest reference intersection to help precisely locate the crash. In this case, enter the name of the cross-street of that nearest reference intersection.

In either case, for the at intersection or the nearest reference intersection, the On Road/Street Name and the Reference/Intersection Road Name together specify the intersection.

Guidance

Follow the same naming rules as described above for the “On” Roadway.

NOTE: There are rare cases, for example with loop drives, where there will be two different intersections with the same on & cross-street names. The GPS coordinates will distinguish between the two.

Field 34: Intersection Offset Unit/Distance/Direction

Change(s):

- Restructured the set of fields to a complete self-sufficient block

Rationale:

- Make it clearer to the officer what fields should be filled to better locate the crash relative to a nearby intersection.

Intersection Offset Distance Unit	<input type="text"/>	01. Miles	02. Feet
Intersection Offset Distance		03. At the Intersection	
Intersection Offset Distance	Offset Direction	N <input type="checkbox"/>	S <input type="checkbox"/> E <input type="checkbox"/> W <input type="checkbox"/>

For a crash that does not occur at an intersection, the Intersection Offset indicates the distance and direction from the nearest/reference intersection, which helps geo-locate the crash.

Guidance

NOTE: Certain ways of describing a location, such as "mid-block" addresses or utility pole numbers might be meaningful to some humans, they cannot be used to geo-locate a crash; they do not provide useful location information for safety analysis purposes and are thus considered unacceptable.

Invalid/unacceptable location information:

- 1st Street at light pole 187827
- 1st Street 200' west of the patch of weeds
- 1st Street at Joe's Feed and Grain
- 8301 N I-25 (there are no address on interstates)
- 1500 Block of East 10th Avenue

Good/useful location information includes

- 1st Street at Main Street
- 1st Street 200' south of Main Street
- 1st Street 0.10 miles south of Main Street
- I-25 at mile marker 100
- I-25 1000' north of Main Street

In a rural area, especially if the milepoint is not known (e.g. on county roads), "near an intersection" would mean within 2-5 miles, since that can help more precisely locate a crash than simply that it occurred somewhere on a 10-mile long road.

Intersection Offset

The three components of the Intersection Offset are:

- **Intersection Offset Unit**
 - This is the unit of distance, either F for Feet or M for Miles
 - If the distance is less than .5 miles or 2500 feet, feet would be preferred. For longer distances, miles would be preferred.
- **Intersection Offset Distance**
 - This is the numerical distance. Do not use fractions, but use decimals instead.
 - If the Offset Unit is F, then this would be the distance in feet. Please enter a whole number (no decimal points) for feet.
 - If the Offset Unit is M, then this would be the distance in miles. Precision to 2 decimal points is preferred.

Example: 1¼ should be entered as 1.25

- **Intersection Offset Direction**
 - There are four check boxes to indicate the direction. Check the one or two boxes that indicate the direction.
 - To indicate that the crash occurred northwest of the intersection, check both the N and the W boxes.

Guidance

- If the crash occurred in an urban area, then an intersection offset location is highly desired (and must be entered if a Lat/Long location is not entered).
- The distance from the intersection should be measured from the **edge** of the intersection (as shown in the illustration below). Remember that anything located within the limits of the intersection, as illustrated in the glossary (Page 187) is considered **in** the intersection.
- If the crash occurred in the intersection, then 03 should be entered in the **Intersection Offset Distance Unit** field.
- The **Distance Direction** is determined in compass heading, not the direction of travel on the roadway.
- Location direction should not be confused with direction of travel. For crashes located south of an intersection with northbound N Broadway, the box should be checked for S.
- Locations that are not within the area within the prolongation of the lateral curb lines (or the lateral boundary lines) should not be coded “at the intersection”

- An alley/road location is not considered “at an intersection”.

Electronic Entry

The selection between feet and miles, along with the appropriate conversion and rounding should be handled automatically.

Business Rules

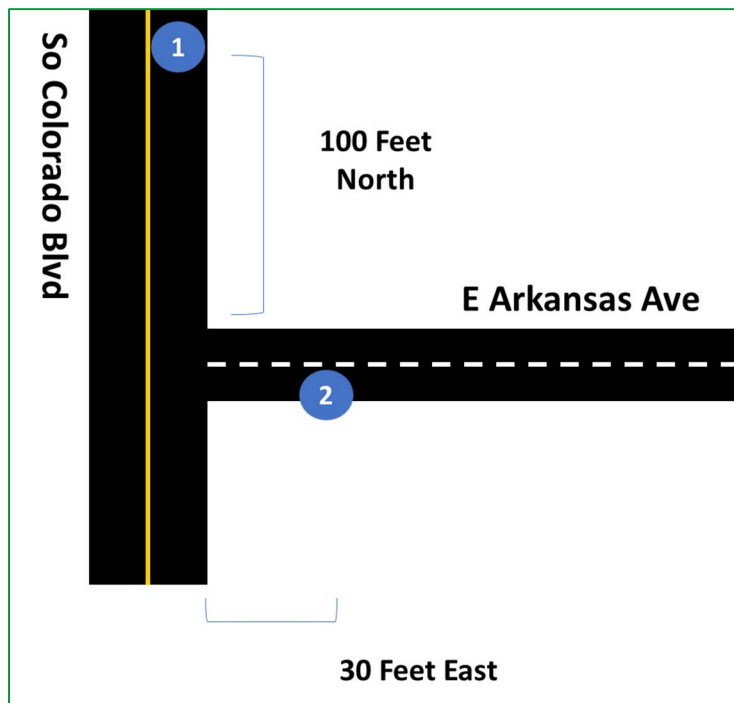

- The user must not check both S and N, or both E and W. Only one N/S direction or one E/W direction is allowed.

Examples

In the illustration below, the crash location data for the location marked with **1** would entered as follows:

- On Road/Street: S Colorado Blvd
- Reference/Intersecting Roadway Name: E Arkansas Ave
- Intersection Offset Unit: F
- Intersection Offset Distance: 100
- Intersection Offset Direction: Only the N check box checked.

Figure 3: Illustration of an Example Intersection Offset

In the illustration above, the crash location data for a crash at the location marked with a **2** would be entered as follows:

- On Road/Street: E Arkansas Ave
- Reference/Intersecting Roadway Name: S Colorado Blvd
- Intersection Offset Unit: F
- Intersection Offset Distance: 30
- Intersection Offset Direction: Only the E check box checked.

Guidance

If the crash occurred within the intersection, **or** if no Reference/Intersecting Roadway Name was given, then the three intersection offset fields (unit, direction, distance) should be left blank.

Field 35: Highway Number

HWY NUMBER

If the crash occurred on a state or interstate highway, outside of city limits, enter the three-digit highway number.

For interstate highways and state highways within city limits, enter the three-digit highway number from **Appendix F**, which cross references local street names to a state highway number. If a highway in your jurisdiction is not listed in **Appendix F**, but you know it is a “state road”, list the highway number and milepoint in this field.

This information can also be accessed using the following web-sites:

https://www.codot.gov/library/traffic/safety-crash-data/accident-rates-books-coding/TCORIS_Coding.pdf

https://www.codot.gov/library/traffic/safety-crash-data/accident-rates-books-coding/InterchangeMaps-MilePoint.pdf/at_download/file

Example: A traffic crash occurring on Federal Boulevard north of W Colfax would be listed as 287 in these fields, and the State Highway box would be checked. “Federal Blvd” may be spelled out in the Roadway Name field if desired.

NOTE: For rural highways and county roads, officers can use both the milepoint and intersection offset. The Milepoint is the primary offset desired.

Field 36: Milepoint

Enter the milepoint (MP) up to two decimal places (100th of a mile) if available.

An example milepoint is 139.25.

The Roadway Check Boxes

Validation Rules

Only one of the roadway check boxes should be marked.

Field 37: Interstate Hwy Check Box

INTERSTATE HWY

Mark this box (enter an “X” or ✓) if the road on which the crash occurred was an interstate highway.

Field 38: STATE HWY Check Box

STATE HWY

Mark this box (enter an “X” or ✓) if the road on which the crash occurred was a state highway.

Field 39: CITY ST/CNTY RD Check Box

CITY ST/CNTY RD

Mark this box (enter an “X” or ✓) if the road on which the crash occurred was a city or county road.

Field 40: OTHER (Public) RDWY Check Box

Change(s):

- New

Rationale:

- Added a missing checkbox to avoid confusion (for roadways that are not interstates, state highways, city streets/county roads).

OTHER RDWY

Mark this box (enter an “X” or ✓) if the road on which the crash occurred on a roadway that is NOT an interstate highway. State highway, or city/county road.

Guidance

- This checkbox is for public roadways such as park service, forest service, or BLM roads.
- This check box should NOT be marked if the roadway on which the crash occurred is not public roadway. For example, roads in parking lot or private subdivision are not considered public roadways.

Field 41: Milepoint Offset Unit/Distance/Direction

Change(s):

- Restructured the set of fields to a complete self-sufficient block

Rationale:

- Make it clearer to the officer which fields should be filled to better locate a crash relative to a nearby milepoint marker.

Milepoint Offset Distance Unit	<input type="text"/>	01. Miles	02. Feet
Milepoint Offset Distance		03. At the Milepoint	
	Offset Direction	N <input type="checkbox"/>	S <input type="checkbox"/> E <input type="checkbox"/> W <input type="checkbox"/>

Enter the milepoint offset distance. If the offset distance is in miles, then use up to two decimal places (100th of a mile) if available. An example milepoint offset distance in miles is 1.25.

If the offset distance is in feet, then enter the distance in feet rounded to the nearest 10. An example milepoint offset distance in feet is 150.

Guidance

If the crash occurred in a rural area, then milepoint offset location is highly desired (and must be entered if a Lat/Long location is not entered).

- If the crash occurred at the entered milepoint, then no offset distance or direction need be entered.
- If the crash occurred some distance from the highway milepoint entered, then the offset distance and direction can be entered here.
- **Milepoint Offset Unit**
 - This is the unit of distance, either F for Feet or M for Miles
 - If the distance is less than .5 miles or 2500 feet, feet would be preferred. For longer distances, miles would be preferred.

- **Milepoint Offset Distance**

- This is the numerical distance. Do not use fractions; use decimals instead.
- If the Offset Unit is F, then this would be the distance in feet. Please enter a whole number (no decimal points) for feet.
- If the Offset Unit is M, then this would be the distance in miles. You should enter 2 decimal points.

Example: $\frac{3}{4}$ would be entered as 0.75.

- **Milepoint Offset Direction – this is the direction**

- There are four check boxes to indicate the direction. Check the one or two boxes that indicate the direction.
- To indicate that the crash occurred northwest of the milepoint, check both the N and the W boxes.

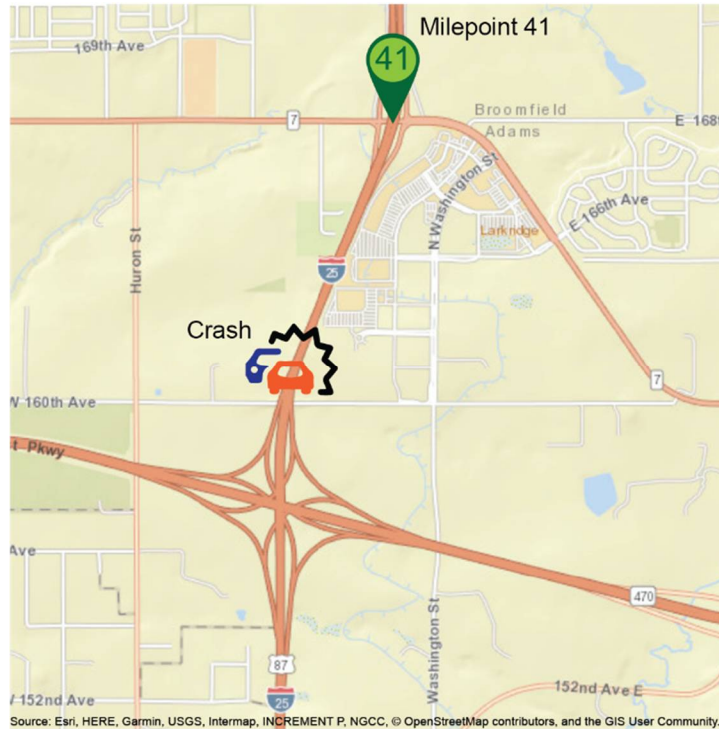

- If the crash occurred at the milepoint that was entered, or if no milepoint was entered, then the above three milepoint offset (unit, direction, distance) fields should be left blank.
- NOTE: The offset direction is where the crash occurred relative to the milepoint entered. As shown in the example below, the crash occurred to the southwest of the milepoint 41, and thus the direction is SW (both S and W checked). **The milepoint offset direction is independent of the direction of travel on I-25 (north or south).**

Example

In the example below, the crash occurred at the location marked “Crash”. This location is about 1.1 miles southwest of the milepoint 41 (at exit 41) on I-25. For this location, the Milepoint/Offset location would be entered as:

- Milepoint = 41.0
- Milepoint Offset Distance Unit = 01. Miles
- Milepoint Offset Distance = 1.1
- Milepoint Offset Direction – Both S and W would be checked.

Figure 4: Direction/Offset from a Milepoint

Business Rules

- If the crash occurred on a state or interstate highway (either the INTERSTATE HWY or the STATE HWY check boxes were selected) and outside of city limits (nothing entered in the City field), then a milepoint should be entered.
- The user must not check both S and N, or both E and W.

Electronic Reporting

- If “At the Milepoint” is selected, then the Milepoint Offset Distance and Milepoint Offset Direction checkboxes should be disabled.

Examples

Remember: An accurate crash location is of utmost importance. Please take the time to fill the location fields out.

If a crash occurs on a state highway within city limits, the report taker should enter data in the location fields as follows:

- General location fields completed
 - Field 30:County

- Field 31:City
- Preferred specific location field completed
 - Field 29: Latitude/Longitude
- The “on” roadway fields completed
 - Field 32: On Road/Street (Name) could be entered
 - Field 38:STATE HWY Check Box
 - Field 35:Highway Number
- For crashes at or near an intersection, complete the following (otherwise leave them blank)
 - Field 33: Reference/Intersecting Road/Street (Name)
 - Field 34: Intersection Offset Unit/Distance/Direction
- Leave blank:
 - Field 37: Interstate Hwy Check Box
 - Field 39: CITY ST/CNTY RD Check Box
 - Field 40: OTHER (Public) RDWY Check Box
 - Field 36: Milepoint
 - Field 41: Milepoint Offset Unit/Distance/Direction

Example 2: A crash occurs on a state highway **outside of** city limits, the report taker should enter data in the location fields as follows:

- General location fields completed
 - Field 30: County
 - (Field 31: City would be left blank)
- Preferred specific location field completed
 - Field 29: Latitude/Longitude
- The “on” roadway fields completed
 - Field 32: On Road/Street (Name) could be entered
 - Field 38: STATE HWY Check Box
 - Field 35:Highway Number

- Complete the following regarding the milepost:
 - Field 36: Milepoint
 - Field 41: Milepoint Offset Unit/Distance/Direction
- If the crash occurred at or near an intersection, fill out the following (otherwise, leave them blank)
 - Field 33: Reference/Intersecting Road/Street (Name)
 - Field 34: Intersection Offset Unit/Distance/Direction
- Leave blank:
 - Field 37: Interstate Hwy Check Box
 - Field 39: CITY ST/CNTY RD Check Box
 - Field 40: OTHER (Public) RDWY Check Box

NOTE

Remember: The offset direction should not be confused with direction of travel, nor with the prefix direction of the roadway name. For example, if a crash occurred on a southbound lane of S Broadway, 500 feet north of W Iliff as in the map snippet below. The Direction of Travel is S (traveling on the southbound lane), but the Intersection Offset Direction is N (north of the intersection with Iliff).

Field 42: Location

Change(s):

- Added selection 07. Center Median/Island

- Added example illustrations

Rationale:

- Addresses a common situation that was not previously covered, and thus wasn't obvious to an officer what to enter.

LOCATION		01. On Roadway	04. Ran Off 'T' Intersection	06. On Private Property
		02. Ran Off Left Side	05. Vehicle Crossed Center Median Into Opposing Lanes	07. Center Median/Island
		03. Ran Off Right Side		

Enter the code which best corresponds to the location of the crash with respect to roadways. Although there are several events involved in a crash, traffic crashes are located by the first **harmful** event.

Example: Vehicle #1 ran off the road on the right, overcorrected and ran off on the left where it hit a tree. No damage occurred where it ran off on the right. Enter **02. Ran Off Left Side**.

Guidance

- **Location**
 - If there are any conflicts or inadequate information, enter **01. On-roadway**.
 - Code **05. Vehicle Crossed Center Into Opposing Lanes** is only used if a vehicle crosses the median and enters the opposing lanes or roadway. A frontage road is a roadway set apart by a separator not a median and is not included in this definition.

- Code **06. On Private Property** is used only used if entirely contained within the boundaries of a private property. If a vehicle runs off a roadway onto private property (where damage occurs), this is a “run off road” crash (code 02 or 03).
- Use the Glossary to assist you with classification when needed.
- Refer to the illustrations on the following pages to identify locations and harmful events.

Examples

The following illustrations and explanations provide examples when each of the codes would be selected for the Location.

01. On Roadway

Example: Vehicle #1 and Vehicle #2 were traveling in the same direction in the right-hand lane. Vehicle #1 struck Vehicle #2 from behind, resulting in Vehicle #2 being run off of the road where it hit a tree.

02. Ran Off Left Side

Example: Vehicle #1 was traveling in the right-hand lane and hit a patch of ice, causing it to run off on the left. It crossed over the left-hand lane and crashed into a tree.

03. Ran Off Right Side

Example 1: Vehicle #1 hit a patch of ice causing it to veer into the left lane, overcorrected, and ran off on the right-hand side over a separator into the oncoming traffic of the frontage road. Vehicle #1 crashed into Vehicle #2, traveling in the right-hand lane of the frontage road.

Example 2: Vehicle #1 hit a patch of ice and ran off on the right where it crashed into a sign.

04. Ran Off “T” Intersection

Example: Vehicle #1 continues past a stop sign, through a “T” intersection, colliding with a barrier.

05. Vehicle Crossed Center Median into Opposing Lanes

Example 1: Vehicle #1 was traveling in the left-hand lane and ran off the left side, over the center median into opposing lanes. Vehicle #1 crashed into Vehicle #2, which was traveling in the right-hand lane of opposing traffic.

Example 2: Vehicle #1 was traveling eastbound in the left-hand lane and turned left through an intersection with a raised median on its left and a painted median on its right. Vehicle #2 was westbound traveling in the right-hand lane of opposing traffic, could not avoid Vehicle #1, and crashed into the right side of Vehicle #1.

06. Private Property

If the conditions are met for marking the **PRIVATE PROPERTY** checkbox (see the guidance on page 26), then this code should be selected for the Location.

07. Center Median / Island

Example: Vehicle #1 was traveling on the westbound lane, hit a patch of ice, and slid into the median between the westbound and eastbound lanes where it ran into the cable median barrier and came to a stop.

Field 43: Number of Lanes Blocked

Change(s):

- New

Rationale:

- To identify locations where incident management could be improved to reduce the impact on traffic flow due to a crash and/or to reduce likelihood of secondary crashes.

Number of Lanes Blocked	<input type="text"/>
-------------------------------	----------------------

Enter the maximum number of traffic lanes that were blocked by the crash. Include any auxiliary lanes on which traffic could otherwise have flowed. Do not include shoulders, or lanes that were closed due to construction, or lanes that were otherwise not available for traffic to flow for other reasons than the crash.

Field 44: Lane Position

Change(s):

- New

Rationale:

- To support analyses to identify on where the crash occurred on multi-lane roadways for better identification of corrective treatments.

LANE POSITION	<table border="1"><tr><td></td><td></td><td></td></tr></table>			

Enter the designation for the lane in which actions that most contributed to the crash occurred, and that needs attention for possible safety improvements. In general, that would be equivalent to the lane in which the first harmful event occurred, but that might not always be the case.

The Lane Position field uses three characters that make up the following two designations:

- The first character is the **direction** designation; used to indicate which side of the roadway. This is not necessarily the direction of travel of the vehicle (if the vehicle is traveling the wrong way, for example), but is the normal direction of travel for the lane in question.
 - The valid values for the direction designation are: N, S, E, and W
- The next two characters are the **lane** designation; used to indicate which lane on that side of the roadway. The lane designation can be:
 - A 2-digit number (with zero padding) such as 01, etc., or
 - LS to designate the left shoulder, or
 - RS to designate the right shoulder.

Guidance

This field leverages the National Transportation Incident Management Coalition/Lane Designation Terminology, with the following conventions:

- For divided roadways, the lane positions are numbered as shown below in **Figure 5: Divided Roadways Lane Positions (for an E/W oriented highway)** below.
- For undivided roadways, the lane positions are numbered from left to right for each direction of travel as shown below in **Figure 6: Undivided Roadways Lane Positions** below.
- The numbered designation applies to ALL travel lanes in the same roadway direction of travel that are not separated by a permanent physical barrier (concrete jersey, raised or grass median, etc.) that essentially creates another separate roadway. Such lanes include
 - Through lanes (driving, passing, etc.),
 - HOV, toll, or other managed lanes,
 - Right turn or left turn lanes,

- Slow vehicle lanes, or
 - Other auxiliary lanes (e.g. acceleration or deceleration lanes).
- The lane numbering starts at 01 for left-most lane, and each additional lane gets incremented.

Validation Rules

Note: The following conventions apply:

- The Lane Designation is **always** three characters.
- The first character **must** be one of: N, S, E, and W
- The next two characters **must** be either:
 - A 2-digit number (with zero padding) such as 01, etc., or
 - LS or RS.

EXAMPLES

The following examples make use of the diagrams below.

Figure 5: Divided Roadways Lane Positions (for an E/W oriented highway)

Example 1: V1 starts in the driving lane on the east-bound side of the road, and then changes lanes and sideswipes V2 in the passing lane on the same side of the roadway. The LOCATION / LANE POSITION fields would be entered as follows:

- LOCATION = 01 (On roadway), and
- LANE POSITION = E01, since V1 moved into lane 1 of the east-bound side of the roadway.

Example 2: Where V1 starts in the passing lane on the east-bound side of the road, then crosses over the center median, and hits V2 in the inside lane in the opposite direction. The LOCATION / LANE POSITION fields would be entered as follows:

- LOCATION = 05 (Vehicle Crossed Center Median into Opposing Lanes), and
- LANE POSITION = W01 (the inside lane of the opposite, west-bound side of the roadway)

Example 3: On a divided highway: V1 is traveling in the west-bound lanes and hits the guardrail in the median. The LOCATION / LANE POSITION fields would be entered as follows:

- LOCATION = 02. Ran Off Left Side
- LANE POSITION = WLS

Example 4: V2 is stopped in the outside shoulder on the west-bound side of the highway, and V1 drifts over from W02 and hits V2. The LOCATION / LANE POSITION fields would be entered as follows:

- LOCATION = 03. Ran Off Right Side
- LANE POSITION = WRS

Figure 6: Undivided Roadways Lane Positions

(There really isn't a shoulder on the left / oncoming side of the road, since it's a curb)

Example 5 (Similar to Example 1 above, but for an undivided road): V1 starts in the driving lane in the north-bound lanes, and then changes lanes and hits V2 that was in the passing lane. The LOCATION / LANE POSITION fields would be entered as follows:

- LOCATION = 01. On Roadway, and
- LANE POSITION = N01 (since V1 moved into that lane)

Example 6 (Similar to Example 2 above, but for an undivided road): V1 crosses over the center line, and hits V2 in the inside lane in the opposite direction. The LOCATION / LANE POSITION fields would be entered as follows:

- LOCATION = 05. Vehicle Crossed Center Median into Opposing Lanes, and
- LANE POSITION = S01 (i.e. the inside lane in the opposite direction)

Example 7: V1 hits the guardrail on the right. The LOCATION / LANE POSITION fields would be entered as follows:

- LOCATION = 03. Ran Off Right Side, and
- LANE POSITION = NRS

Example 8: V1 is on the northbound lanes, crosses all the way to run off the road to the left. The LOCATION / LANE POSITION fields would be entered as follows:

- LOCATION = 02. Ran Off Left Side, and
- LANE POSITION = S02

Example 9: A two-way left turn lane

- A two-way left turn lane (and any lane shared by both directions of travel) will be numbered 01 IN BOTH DIRECTIONS. In other words, it could be considered N01 or S01, depending on how the crash occurred. For example,
 - If Vehicle 1 starts in lane S02 and then moves into the two-way left turn lane where Vehicle 2 (which was traveling north) was waiting to turn left, the shared two-way left turn lane would best be identified as N01.
 - If Vehicle 2 was traveling south in the two-way left turn lane, and Vehicle 1 (also traveling south) rear-ends Vehicle 2, then the two-way left turn lane would best be identified as S01.

Example 10: In an intersection:

- An intersection crash essentially occurs in a space that is not specific to any one direction of travel. Thus, the convention to follow is where the at-fault vehicle (Traffic Unit 1) came into the intersection. The diagram below illustrates the Lane Position code that would be used for the various cases, such as:
 - If the at-fault traffic unit Vehicle 1 is traveling west in the left turn lane, and turns into traffic coming from the east, the appropriate code to enter would be W01.
 - If the at-fault traffic unit Vehicle 1 is traveling north in the right-most lane, ran the stop sign, and collided with a pedestrian in the crosswalk, the appropriate code to enter would be N03.

- If the at-fault traffic unit is a non-pedestrian that entered the intersection from one of the travel lanes, then the same convention should be applied.
- If the at-fault traffic unit is a non-pedestrian that did not enter the intersection from one of the travel lanes, then this field should be left blank.

Figure 7: Intersection Lane Positions

Field 45: Harmful Event Sequence

Change(s):

- Added several new selections
- Split out structures
- Deleted several selections
- Allow up to four events to be captured

Rationale:

- To make it clearer to the officer which code to select in various circumstances. To make it easier to select events that contributed to the crash occurrence.

HARMFUL EVENT SEQUENCE		1st <input type="text"/>	2nd <input type="text"/>	3rd <input type="text"/>	4th <input type="text"/>	Most Harmful Event <input type="text"/>
NON-COLLISION CRASH		08. Front to Side	09. Rear to Side	47. Electrical/Utility Box	46. Ground	
01. Overturning/Rollover		10. Rear to Rear	11. Side to Side-Same Direction	21. Sign	29. Curb	
44. Immersion, Full or Partial		12. Side to Side-Opposite Direction	13. Parked Motor Vehicle	41. Guardrail Face	30. Delineator/Milepost	
45. Fell from Motor Vehicle		14. Collision with Other Vehicle	15. Domestic Animal	42. Guardrail End	31. Fence	
02. Other Non-Collision		16. Collision with Animal	17. Wild Animal	23. Cable Rail	32. Tree	
COLLISION WITH NON-MOTORIST		18. Collision with Object	19. Light Pole/Utility Pole	24. Concrete Highway Barrier	33. Large Rocks or Boulder	
03. School Age To/From School		20. Traffic Signal Pole	21. Traffic Signal Pole	48. Overhead Structure (Bridge)	34. Railroad Crossing Equipment	
05. Pedestrian				49. Overhead Structure (Not Bridge)	35. Barricade	
15. Bicycle/Motorized Bicycle				50. Bridge Structure (Not Overhead)	36. Wall or Building	
COLLISION WITH MOTOR VEHICLE IN TRANSPORT				26. Vehicle Debris or Cargo	37. Crash Cushion/Traffic Barrel	
06. Front to Front				27. Culvert or Headwall	38. Mailbox	
07. Front to Rear				28. Embankment	39. Other Fixed Object (Describe in Narrative)	
				43. Ditch	40. Other Non-Fixed Object (Describe in Narrative)	

Enter the codes which best describes the sequence in which the harmful events occurred. A harmful event is that point in the sequence of events when injury or damage occurs.

Guidance

Up to four harmful events can be entered in the sequence. If there are less than four harmful events in the sequence, you should leave the remaining sequence fields blank

Example: Vehicle #1 is northbound on I-25 when it changes lanes and sideswipes Vehicle #2. Vehicle #2 runs off the roadway into the median and rolls over, coming to rest on its top. This crash would be coded for the Harmful Event Sequence as follows:

- First: 11. Side to side – same direction;
- Second: 01. Overturning/Rollover
- Third: blank
- Fourth: blank

Terminology: The following explanations cover some of the new terms used:

- Center Median: This covers a median (whether painted, planted, raised) between the opposing lanes of travel. This also covers the center island of a roundabout.

Figure 8: Center Median for a Roundabout

- Vehicle Debris or Cargo: This applies when the crash involved striking falling or shifting cargo or anything set in motion by a motor vehicle.

Harmful Events

Notes:

- Several of the codes from DR2447 are no longer used;
 - 04. Pedestrian on Toy Vehicle, since pedestrian details are now handled on the Non-Motorist page,
 - 14. Railway Vehicle/Light Rail and 16. Road Maintenance Equipment. since these vehicles are covered in the Unit Types and thus are captured with all Unit data elements, and
 - 22. Guardrail, since this has been split into face or end – see below.
 - 25. Bridge Structure, since this has been expanded to indicate different structures – see below.
- There are several new codes in this field;
 - The codes 41. Guardrail Face and 42. Guardrail End have replaced the now obsolete 22. Guardrail. Select 41. Guardrail Face if a vehicle hit the long, flat part of the guardrail, and 42. Guardrail End if a vehicle hit either of the two ends of the guardrail.
 - 43. Ditch was added for when the vehicle (or non-motorist) simply slid or fell into the borrow ditch.

- 44. Immersion, Full or Partial was added if the vehicle (or non-motorist) fell into water (either a stream or river, or a lake).
 - 45. Fell From Motor Vehicle was added if a person was injured due to falling from a motor vehicle in transport.
 - 46. Ground was added if the vehicle (or non-motorist) hit the ground. This could happen if a motorcyclist or bicyclist for example slid out and fell, or if a vehicle went over an embankment or cliff and hit the ground.
 - 47. Electrical/Utility Box was added to cover boxes for phone, cable, signal control, etc.
 - 48. Overhead Structure (Bridge) is for the deck or pillars for a bridge crossing over the roadway.
 - 49. Overhead Structure (Not Bridge) is for a non-bridge structure (such as overhead signs, etc.) crossing over the roadway.
 - 50. Bridge Structure (Not Overhead) is for a structure (deck, barrier, etc.) associated with the bridge carrying the roadway.
- Code 34. Railroad Crossing Equipment applies when the harmful event occurred in the area formed by the at-grade connection of a railroad bed and a roadway, and the crash involved equipment associated with the crossing (primarily, the gates).
 - Examples for codes 06. Front-to-Front through 12. Side to Side-Opposite Direction are illustrated below.

Collision Types

06. Front to Front

Example 1: Vehicle #1 was traveling behind Vehicle #2 in the right-hand lane. Vehicle #1, while trying to pass Vehicle #2 on the left, hit a patch of ice causing it to lose control and swerve head first into Vehicle #2.

Example 2: Vehicle #1 crossed over into the opposing lane and crashed into the front of Vehicle #2.

07. Front to Rear

Example 1: Vehicle #1 was traveling behind Vehicle #2 and crashed into Vehicle #2 from behind.

Example 2: Vehicle #1 was traveling behind Vehicle #2 and crashed into Vehicle #2 from behind.

08. Front to Side

Example 1: Vehicle #1 was traveling on the right lane while Vehicle #2 was in the left, both going in the same direction. Vehicle #1 hit a patch of ice and ran over into the left lane, crashing its left side into the front of Vehicle #2.

Example 2: Vehicle #1 hit a patch of ice and ran off the left side into opposing traffic where its right side crashed into the front of Vehicle #2.

Example 3: Vehicle #1 took a left-hand turn at a “T” intersection stop sign, Vehicle #2, traveling in the opposing lane of Vehicle #1’s intended direction, crashed into the left side of Vehicle #1 during the left-hand turn.

Example 4: Vehicle #1 took a left turn onto a new road, crossing over traffic going in the opposite direction. Vehicle #2 was traveling in the opposing lane and crashed into the right side of Vehicle #1.

09. Rear to side

This is a rare event outside of parking lots.

Example: Vehicle #1 was backing up and ran into the side of Vehicle #2.

10. Rear to Rear

This is a rare event outside of parking lots.

Example: Vehicle #1 was backing up and ran into the rear end of Vehicle #2.

11. Side to Side – Same Direction

Example 1: Vehicle #1 was traveling on the left lane while Vehicle #2 was in the right, both going in the same direction. Vehicle #1 crossed over into the right lane, crashing its right side into the left side of Vehicle #2.

Example 2: Vehicle #1 and Vehicle #2 were traveling in opposite directions. Vehicle #1 hit a patch of ice causing it to lose control and spin forward into the opposing lane where its right side collided with the left side of Vehicle #2.

12. Side to Side –Opposite Direction

Example 1: Vehicle #1 and Vehicle #2 were traveling in opposite directions. Vehicle #1 crossed over into the opposing lane, crashing its left side into the left side of Vehicle #2.

Example 2: Vehicle #1 was traveling on the left lane while Vehicle #2 was in the right, both going in the same direction. Vehicle #1 hit a patch of ice causing it to lose control and spin forward into the right lane where its left side collided with the left side of Vehicle #2.

Field 46: Most Harmful Event

Most Harmful Event

Enter the code of the harmful event listed in the sequence which identifies the most harmful event that occurred. It is the event that resulted in the most severe injury or, if no injury, the greatest property damage involving this motor vehicle.

Validation Rules

The Most Harmful Event must be one of the harmful event sequence.

Field 47: Road Contour – Curves

Change(s):

- Split the previous Road Contour field into two separate curves and grade fields.

Rationale:

- Make it easier for the officer to select the curve and grade attributes that apply, to cover the various combinations that might a.

ROAD CONTOUR - CURVES	<input type="text"/>	01. Straight 02. Curve Left	03. Curve Right 04. Unknown
----------------------------------	----------------------	--------------------------------	--------------------------------

Enter the code which best describes the horizontal curvature characteristic of the roadway.

Guidance

- For Curve Left and Curve Right, pay careful attention to the direction of travel of Traffic Unit # 1.
- If that Vehicle or Non-Motorist was going through a right-hand curve, then Curve Right is the code to enter, even if the other Traffic Units involved were not traveling in the same direction.

Field 48: Road Contour – Grade

ROAD CONTOUR - GRADE	<input type="text"/>	01. Level 02. Uphill 03. Hill Crest	04. Downhill 05. Sag/Bottom 06. Unknown
---------------------------------	----------------------	---	---

Enter the code which best describes the vertical characteristic of the roadway in the direction of travel of Traffic Unit # 1.

Guidance

- The code 01. Level is equivalent to “flat”.

- For Uphill and Downhill, pay careful attention to the direction of travel of Traffic Unit # 1.
- If Traffic Unit # 1 was traveling uphill, then enter code 02. Uphill, even if the other Traffic Units involved were not traveling uphill.

NOTE: The grade is not the banking (also known as superelevation) of the roadway in a curve. It refers to whether Traffic Unit 1 is traveling uphill, downhill, or is at the crest of a hill or the bottom of a valley.

Figure 9: Examples of Grade

Field 49: Road Description

Change(s):

- Added selections to cover more types of location descriptions.

Rationale:

- Make it easier for the officer to identify which code would apply to the crash

ROAD DESCRIPTION	<input type="checkbox"/>	01. At Intersection	05. Crossover-Related	10. Ramp-related	14. Mid-Block Crosswalk
	<input type="checkbox"/>	02. Driveway Access Related	06. Roundabout	11. Alley Related	15. Express/Managed/HOV Lane
	<input type="checkbox"/>	03. Intersection Related	08. Parking Lot	12. Share-Use Path or Trail	
	<input type="checkbox"/>	04. Non-Intersection	09. Ramp	13. Auxiliary Lane	

Enter the code which best describes the location of the crash on the roadway.

Guidance

- The code 01. At Intersection applies when the first harmful event occurs within the limits of an intersection (i.e. within the hatched regions of **Figure 10: Intersection**).

Figure 10: Intersection

(Source ANSI D.16 2017 Edition)

- The code 03. Intersection Related applies when the intersection was a factor in the crash. It does not automatically apply just because the crash occurred at or near an intersection. As per the MMUCC, this code applies when the crash “(1) occurs on an approach to or exit from an intersection and (2) results from an activity, behavior or control related to the movement of traffic units through the intersection.”
- For code 15. Express/Managed/HOV lane, there are several configurations possible: A) it may be divided from the other through lanes or not, and B) it may have a Positive Median Barrier, Median Rumble Strips, Buffer Area, or just Pavement Markings
- The code 09. Ramp applies when the first harmful event occurs on an entrance or exit ramp. For example, Vehicle #1 was traveling behind Vehicle #2 while on an entrance (or exit) ramp. Vehicle #1 crashed into the rear of Vehicle #2 while still on the ramp before Vehicle #2 merged onto traffic.
- The code 10. Ramp-related applies when the first harmful event occurs off the entrance/exit ramp roadway but is related to the use of or entry onto the ramp. Vehicle #2 was travelling on an entrance ramp, preparing to merge onto main traffic. Vehicle #1 was traveling in the right lane and crashed into the left side of Vehicle #2 as Vehicle #2 merged onto traffic.
- Code 13. Auxiliary Lane applies to lanes where vehicles can accelerate to match the speeds of surrounding traffic before merging, or to decelerate before exiting from the roadway (e.g. onto a ramp)

09. Ramp

10. Ramp-Related

Business Rules

- A parking lot does not contain roads. If 08. Parking Lot is selected, then Road Contour - Curves, Road Contour - Grade, and Road Condition should be left blank.

Field 50: Approach/Overtaking Turn

APPROACH/OVERTAKING TURN	<input type="checkbox"/>	01. Approach Turn	03. Not Applicable
		02. Overtaking Turn	

If the crash involved an approach turn or overtaking turn, enter **01** or **02**. If the collision did not involve an approach turn or overtaking turn, enter **03**.

Action	Element	Notes	Example
01	Approach Turn	Two vehicles traveling in the opposite direction. One vehicle turns into the path of the other. (Example: left turn at intersection).	
02	Overtaking Turn	Two vehicles traveling in the same direction. One vehicle turns into the path of the other. (Example: right turn from the left lane).	
03	Not Applicable		

Field 51: Lighting Condition

LIGHTING CONDITION	<input type="checkbox"/>	01. Daylight	03. Dark-lighted
		02. Dawn or Dusk	04. Dark-Unlighted

Enter the code which best describes the lighting condition at the time and location of the first harmful event. Code 03. Dark-lighted refers to street/highway lighting.

Field 52: Road Condition

Change(s):

- Added selections to cover more conditions

Rationale:

- Make it easier for the officer to identify adverse conditions related to weather or operations that may apply.

ROAD CONDITION		01. Dry	08. Dry W/Visible Icy Road Treatment
		02. Wet	09. Wet W/Visible Icy Road Treatment
		03. Muddy	10. Snowy W/Visible Icy Road Treatment
		04. Snowy	11. Icy W/Visible Icy Road Treatment
		05. Icy	12. Slushy W/Visible Icy Road Treatment
		06. Slushy	13. Sand/Gravel
		07. Foreign Material	14. Roto-Milled

Enter the code which best describes the condition of the roadway at the time and location of the first harmful event.

Guidance

- For “Packed Snow” conditions, the following convention should be used to select the proper code:
 - If the top layer of the snow has developed a sheen, or tires do not leave a track, then the code 05. Icy should be entered. Otherwise, 04. Snowy should be entered.
- “Visible icy road treatment” refers to sand, salt, gravel and or liquid chemical treatments.

Field 53: Weather Conditions

Change(s):

- Change the name of the field
- Modified code 00 and 02
- Added codes 06-09
- Allow up to two selections

Rationale:

- To make it easier for the officer to identify which weather conditions that may have contributed to the crash, and to select the appropriate code(s).
- To address federal reporting requirements

WEATHER CONDITION	1st <input type="text"/>	2nd <input type="text"/>
00. Clear	04. Dust	08. Snow
01. Rain	05. Wind	09. Blowing Snow
02. Sleet or Hail	06. Cloudy	
03. Fog	07. Freezing Rain or Freezing Drizzle	

Enter the code which best describes weather condition at the time and location of the first harmful event.

NOTE: There are several significant changes from the DR2447:

- The Field is no longer called *Adverse Weather Condition*, but just *Weather Condition*.
- The selection 00. used to be None, but now is Clear.
- 02. Snow/Sleet/Hail has been modified to Sleet or Hail
- New selections 06. Cloudy, 07. Freezing Rain or Freezing Drizzle, 08. Snow, and 09. Blowing Snow have been added.

The above changes are to better align with FARS requirements, that differentiate between Clear or Cloudy if there are no adverse weather conditions.

Guidance

- Up to two weather conditions can be entered.
- If only one weather condition applies, then the second one should be left blank.
- The first weather condition identified should be the one that most contributed to the crash occurring, or to the severity of the crash.
 - 02. Sleet or Hail would apply to conditions where precipitation is falling as ice (sleet or hail)
 - 07. Freezing Rain or Drizzle would apply when precipitation is falling as liquid (rain) and then freezing on the roadway.

Business Rules

- If 00. Clear is entered for the first weather condition, then the second one should be left blank.

To Be Completed Only For Fatalities

Change(s):

- Moved from the Supplement into the main form.
- For Traffic Control Device Functioning, added 06. Not Visible.

Rationale:

- Reduce redundancy / broken flow caused by adding a Fatality Supplement.

The following fields are to be completed only in the event of a fatality in the crash.

- Enter the time notified for the first responder/EMS personnel.
- Enter the time the first responder/EMS personnel arrived at the scene.
- Enter the time the most seriously injured party arrived at the hospital.
- If times are unknown, provide the name and contact information of the first responding EMS agency as well as the transporting agency.

Field 54: (EMS) Time Notified

Enter the time at which the first EMS service was notified of the crash. If the time is unknown, then leave blank, and enter the name of the EMS service as described below.

Enter the time using the 24-hour clock system. Do not use a colon.

Field 55: (EMS) Time Arrived at Scene

Enter the time at which the first EMS service arrived at the scene of the crash. If the time is unknown, then leave blank, and enter the name of the EMS service as described below.

Enter the time using the 24-hour clock system. Do not use a colon.

Field 56: (EMS) Time Arrived at Hospital

Enter the time at which the EMS service transporting the deceased (or most seriously injured party) arrived at the hospital. If the time is unknown, then leave blank, and enter the name of the EMS service as described below.

Enter the time using the 24-hour clock system. Do not use a colon.

Field 57: (EMS) Name of Responding Service

If times are unknown provide name of responding services:

Enter the name and contact information of the responding EMS service.

Note: This field only needs to be filled if the above times are not known.

Since the EMS service will have to be contacted to ascertain any unknown times, please provide the information that would help with the contact.

Field 58: Traffic Control Device Functioning

TRAFFIC CONTROL DEVICE FUNCTIONING	
<input type="checkbox"/>	01. No Controls
<input type="checkbox"/>	02. Not Functioning
<input type="checkbox"/>	03. Functioning Improperly
<input type="checkbox"/>	04. Functioning Properly
<input type="checkbox"/>	06. Not Visible
<input type="checkbox"/>	05. Unknown

Enter the code which describes how the traffic control devices was functioning. If more than one device was at the crash scene, it is only necessary to enter the information of the **most significant** traffic control device(s). As an option, the other devices may also be listed in the narrative.

If the code 06. Not Visible is entered, then the cause (e.g. snow, vegetation, etc.) should be noted in the narrative.

Note: CSR § 42-1-102 (64) defines traffic control devices to mean “all signs, signals, markings, and devices, not inconsistent with this title, placed or displayed by authority of a public body or official having jurisdiction, for the purpose of regulating, warning, or guiding traffic.”

For purposes of this field, pavement markings are not considered traffic control devices.

Supervisor Approval

Field 59: Approved By

Approved By

Enter the name of the officer or supervisor who approved the crash report.

Field 60: ID Number

I.D. Number

Enter the ID or/ badge number of the approving officer.

Field 61: Date

Date

Enter the date at which the crash report was approved. Follow the standard MM/DD/YYYY format.

NARRATIVE/DIAGRAM (Page B)

This page is to collect additional information on the crash, including:

- The Narrative;
- The Diagram;
- Damaged Property (for up to two owners).

In the DR3447 package, there will always be one (and only one) copy of this page filled out, and it is always the second page.

Header Fields

NOTE: In general, this information is on the form only, and is not stored in the crash report repository.

Electronic Reporting

- In general, these header fields should be filled out automatically by the electronic reporting application when the crash report is entered electronically.

Field 1: Page 2 of ___ Pages

PAGE 2 OF PAGES

The Narrative/Diagram page is always page 2 of the report.

Enter the same number of total number of pages as on the first page of the crash report package (**Field 1: Page 1 of ___ Pages**) in the second blank.

For information on the order of pages in the crash report package, see *The DR3447 Crash Report Package* on page 17 of this manual.

Field 2: Case Number

Case #

Enter the same case number as on the first page of the crash report package.

Field 3: (Law Enforcement) Agency ORI

Agency ORI

Enter the same agency ORI of the reporting agency as on the first page of the crash report package.

Field 4: (Law Enforcement) Agency Name

Agency Name

Enter the same name of the reporting agency as on the first page of the crash report package.

Form Fields

Field 5: The Narrative

Describe Crash

The narrative provides a description of the crash as a chronological narrative of what occurred, involving three steps:

- a. Set the Stage – describe what was happening just before the crash event occurred; what was each vehicle/non-motorist doing prior to the crash.
- b. Crash the involved parties – describe what happened as the crash event occurred; which vehicle did what that led it to collide with which other vehicle (or non-motorist).
- c. Bring the parties to rest – described what happened after the crash event occurred; how/where did the parties wind up.

Using a specific example to illustrate those three steps:

1. **Set the stage:** Vehicles #1 and #2 were northbound on Colorado 287. Vehicle #3 was southbound on Colorado 287. Vehicle #2 was slowing for traffic ahead.
2. **Crash the involved parties:** Vehicle #2 was slowing for traffic ahead. Vehicle #1 failed to slow and collided into the rear of Vehicle #2. Vehicle #2 skidded 22 feet into the southbound lane, and collided head-on with Vehicle #3.
3. **Bring the parties to rest:** After impact, Vehicle #1 skidded 18 feet and came to rest facing north on the shoulder. Vehicle #2 rotated counterclockwise ¼ time and came to rest on its wheels facing west. Vehicle #3 rotated clockwise ½ turn and came to rest on its wheels facing north in the southbound lane.

Guidance

The DR3447 narrative must include the information described above, and not simply reference another form or report that contains the information.

The only other information that should be included in the narrative are the details for specific field when specified elsewhere in this manual. For example, if a harmful event in the sequence was a vehicle hitting a fixed object not provided in the list, and 39. Other Fixed Object was selected, then the description of the fixed object should be included in the narrative.

The DR3447 narrative should NOT include other case-related information such as witness statements.

Additional examples of appropriate narratives:

1. Vehicles #1 and #2 were northbound on Colorado 287. Vehicle #3 was southbound on Colorado 287. Vehicle #2 was slowing for traffic ahead. Vehicle #1 failed to slow and collided into the rear of Vehicle #2. Vehicle #2 skidded 22 feet into the southbound lane, and collided head-on with Vehicle #3. After impact, Vehicle #1 skidded 18 feet and came to rest facing north on the shoulder. Vehicle #2 rotated counterclockwise $\frac{1}{4}$ times, skidded 20 feet and came to rest on its wheels facing west. Vehicle #3 rotated clockwise $\frac{1}{2}$ turn, skidded 21 feet and came to rest on its wheels facing north in the southbound lane.

Note: Because the measurements for the paths of difficulty of the vehicles are included in this narrative, they will not need to be shown on the diagram. The measurements can be listed in either the diagram or the narrative.

2. Vehicle #1, westbound on Colorado 14, skidded off the right side of the roadway, rolled $\frac{1}{2}$ time down an embankment, and struck a tree with its left side. After impact, Vehicle #1 rolled another $\frac{1}{2}$ time and came to rest on all wheels in the Cache le Poudre River. The driver was ejected from the vehicle prior to the impact with the tree, and came to rest south of the vehicle.

Note: Measurements will need to be shown on the diagram, because they weren't included in this narrative.

3. Traffic Unit #1 was eastbound on Colfax Avenue. Traffic Unit #2, pedestrian, was walking northbound in the crosswalk. Traffic Unit #1 failed to stop for a red light, skidded 52 feet, and collided with the left side of Traffic Unit #2. After impact, Traffic Unit #1, skidded 47 feet and came to rest against the curb. Traffic Unit #2 was vaulted 71 feet and came to rest on the sidewalk at the northeast corner of the intersection. Pedestrian (Traffic Unit #2) expired at the scene.

NOTE: DO NOT INCLUDE PERSONAL IDENTIFIERS (names, addresses, phone numbers, etc.) in the narrative, as they would have to be redacted in many cases for release.

Electronic Reporting

The following template could be provided for the officer to fill out:

TU#1 (<vehicle type>) traveling <direction> on <street> in <lane> at <speed>, <briefly describe the primary cause of the accident> and [struck OR was struck by] TU#2 (<vehicle type>) traveling <direction> on <street> in <lane> at <speed>

Traffic templates may be obtained from various places. Commonly used traffic templates are available from the Institute of Police Technology and Management – IPTM at:

<http://www.iptm.org>

Diagrams should include:

1. Road

- a. Draw roadway lanes and markings at the crash scene. If applicable, also include shoulders, medians, traffic control devices (stop signs and stop lights), and structures (fences or poles).
- b. Identify the name of each roadway. If only one-half of a divided roadway is included in the diagram, specify which roadway it is (for example, southbound I-25).

2. Vehicles

- a. Draw vehicle paths prior to collision, at the point of impact, and to the point of rest. All paths can be drawn with a solid line. The use of dotted lines for skids, scuffs or other physical difficulty is optional, but not required.
- b. Vehicle symbols should be drawn at the point of most significant impact to show approximate headings at impact.
- c. On a non-impact roll-over crash, the vehicle should be drawn immediately prior to the roll-over to show approximate vehicle heading during the roll.
- d. Drawing vehicle symbols prior to impact or at rest is optional. The use of an "X" to indicate point of rest is optional. (See Appendix E – Diagram Symbols).
- e. Skid marks (especially for a fatal crash).

3. Measurements

- a. Show the measurement to locate the most significant Point of Impact (POI).
- b. Indicate the lengths of the paths of difficulty (skid, scuff, etc.). However, if the path measurements are included in the narrative, the measurements will not need to be included again on the diagram.

Guidance

NOTE: only one diagram should be included per crash report, on Page B of the DR3447. Additional diagrams produced as part of an accident reconstruction exercise should not be included as part of in the crash report submitted to the DOR.

The following examples of diagrams illustrate many of the “best practices” relative to developing a diagram.

Figure 12: Diagram Example

Figure 13: Diagram Example

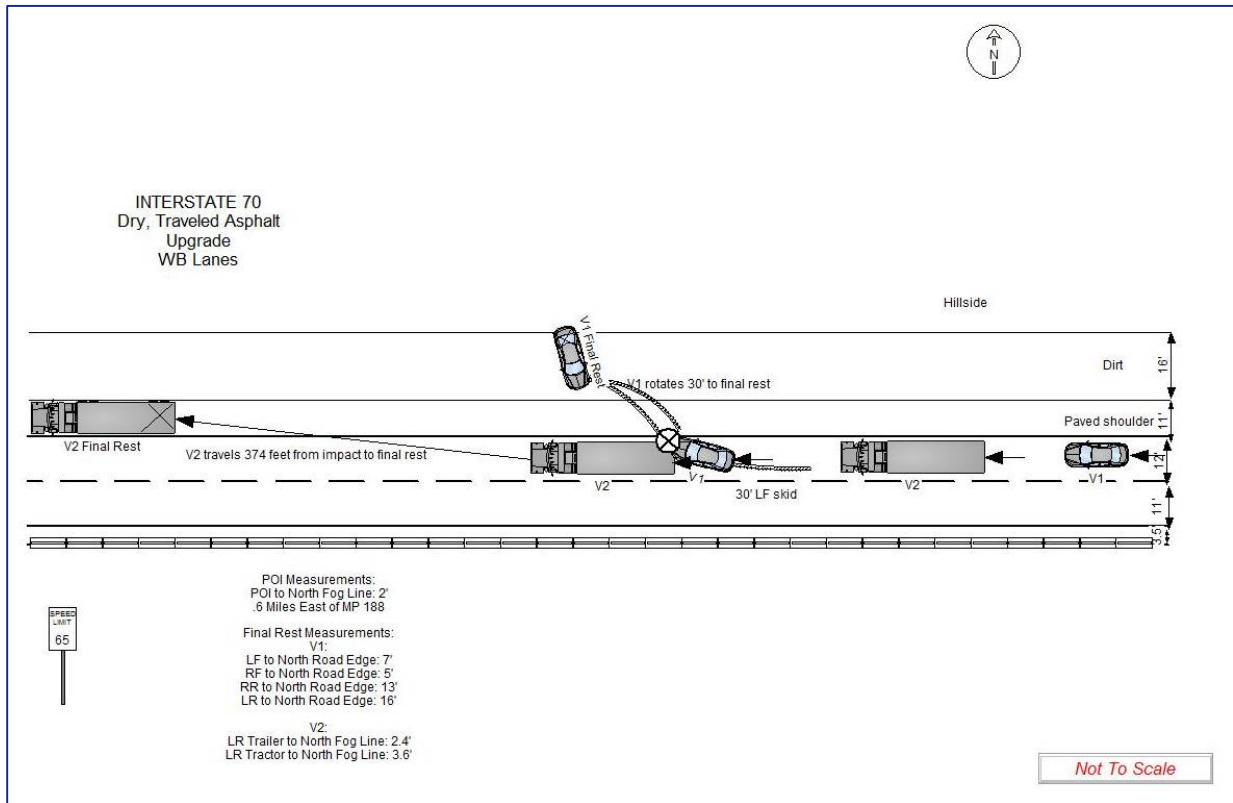

Figure 14: Diagram Example

Damaged Property Fields

Change(s):

- Provided more room for the name and address
- Added space for description of the property
- Added a public property checklist

Rationale:

- Allows more room for entering information about the damaged property item(s)
- Make it easier for the officer to enter damaged property information; no longer need to put some damaged property information in the narrative.

This set of fields is collected in order to support those entities (DOT, DOW, local municipality, utilities) to get reimbursed for damage caused by a crash. Multiple entities can be impacted in a single crash (for example, if a utility cabinet is hit as part of the crash, that can impact an internet/cable provider, a phone provider, etc.). Damaged property generally refers to such items as fences, trees, lawns, utility poles, animals, traffic control devices, and other non-vehicles (if the information hasn't already been included in

prior fields). Vehicles, whether parked or not, should not be listed here. Wild animals are listed here and belong to the State of Colorado.

Guidance

- Do not use this field to list what was damaged, how it was damaged, the location of the damaged property, or the circumstances surrounding it at the time of the crash. This information should be explained in the narrative.
- When a crash involves several owners of several pieces of damaged property, the second owner is listed in the second set of Damaged Property fields. If there are more than 2 damaged properties, the subsequent owners are listed on the Additional Damaged Property page.
- If both public and private property is damaged, list the owners of public property first, followed by owners of private property.
- If damage caused by the crash impacted more than two owners, then use **the ADDITIONAL DAMAGED PROPERTIES (Optional Supplement B)** for up to 8 more additional damaged properties.

NOTE: If the Damaged Property Supplement is used, the Damaged Property # field must be filled out for each additional damaged property reported.

Field 7: Public Property Damaged Check Box

Public Property Damaged <input type="checkbox"/>
--

Mark this box (enter an “X” or ✓) when the crash involves equipment or property that is owned by a Federal, State, County or Municipal agency, or a special governmental district.

Field 8: Owner of Damaged Property – Name

Damaged Prop. Last Name	First Name	MI
-------------------------	------------	----

Enter the last name, first name, and middle initial of the owner of property damaged in a crash.

Follow the structure as defined in the section on Entering A Person’s Name, on page 12.

The owner of the property, if known, should always be entered. If another individual, such as a renter, has immediate control of the property, his or her name should be listed in the narrative.

Field 9: Owner of Damaged Property – Address

Address	City	State	ZIP
---------	------	-------	-----

Enter the street, route, or P.O. Box number, city, state, and zip code of up to two owner(s) of the damaged property.

Field 10: Damaged Property Description

Damaged Prop. Description

Briefly describe the damaged property, with just a few words, for example “STOP sign” or “guardrail” or “utility cabinet at intersection”.

MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C)

This page applies to Traffic Units that are motorized vehicles (whether in movement, parked, stopped, or non-contact), and covers the information on the vehicle, the driver, and up to four occupants.

If there are more than 4 occupants in this vehicle, you'll also need to add one or more copies of the ADDITIONAL MOTOR VEHICLE OCCUPANTS (Optional Supplement A).

For non-motorists such as pedestrians and bicyclists, use the TRAFFIC UNIT/NON-MOTORIST (Page E) of the form and not this page.

For each motor vehicle involved in the crash, there will be one copy of this page PLUS one copy of the TRAFFIC UNIT/GENERAL VEHICLE AND CMV (Page D). Together, these two pages (Page C and Page D) cover all the information to be collected on each motorized vehicle involved in the crash.

In the DR3447 package, these pages will follow pages A and B.

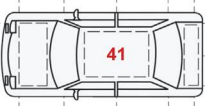

For detailed information regarding building the DR3447 package, see the section **on The DR3447 Crash Report Package** on page 17.

Handling Different Vehicle Circumstances

Parked Vehicle

A vehicle being parked essentially means that it is not a **motor vehicle in transport**. The term “in transport” denotes the state or condition of a transport vehicle which is in motion or within the portion of a transport way ordinarily used by similar transport vehicles. When applied to motor vehicles, “in transport” means in motion or on a roadway.

The conventions for filling out the crash form (MMUCC) states that:

A parked motor vehicle is a motor vehicle not in-transport, other than a working motor vehicle, that is not in motion and not located on the roadway. In roadway lanes used for travel during some periods and for parking during other periods, a parked motor vehicle should be considered to be in-transport during periods when parking is forbidden. Any stopped motor vehicle where the entirety of the vehicle’s primary outline as defined by the four sides of the vehicle (e.g., tires, bumpers, fenders) and load, if any, is not within the roadway is parked.

That working definition is consistent with CRS 42-4-102(67), which states that:

“Park” or “parking” means the standing of a vehicle, whether occupied or not, other than very briefly for the purpose of and while actually engaged in loading or unloading property or passengers.

Guidance

Unless the owner, attendant, or driver of a parked vehicle involved in a crash is charged with a crash related violation, the description of the owner, driver or attendant is not to be entered in the fields normally utilized for vehicle operators.

If the parked vehicle has an individual in the driver or passenger seats, they are parties to be included in the crash. If a parked vehicle does not have a driver or passengers, but those individual(s) are near the parked vehicle, the vehicle is parked unattended and the driver/passengers are non-motorists (who may or may not be involved in the crash).

Examples

The following examples are considered parked vehicles:

- An occupied, stationary vehicle having just been driven into a parked position, or a vehicle about to be immediately occupied and driven from a parked position, would not be considered parked.
- A stationary vehicle where the driver has walked away from the vehicle for any purpose should be considered parked. For example, a UPS truck would be considered parked when the driver leaves the truck to deliver a package.

The following examples are of a vehicle that is **not** parked.

- A vehicle engaged in traffic but stopped due to congestion (even with the engine turned off).

- A vehicle, briefly stationary for the purpose of, and while engaged in, loading or unloading property or passengers.
- An occupied, stationary vehicle, whether in a lane of traffic or not, and even if not being actively driven. This would include a vehicle stopped while the driver uses a phone or checks a map, or because the vehicle is disabled.
- A disabled vehicle in a lane of traffic, occupied or not.

NOTE: The description of the vehicle and the owner of the parked vehicle will be noted the same as other involved vehicles, covering the year, make, model, etc.:

- **Field 24: Vehicle Owner Name** and **Field 26: Vehicle Owner Street Address** should be utilized to record information on the owner of the parked vehicle.
- **Field 36: Make** through **Field 39: Color** can be used to describe the vehicle.

If the person responsible for the vehicle at the time of the crash is other than the registered owner, is not present as a stationary driver or passenger, and was not cited with a crash related violation, that person's information may be entered in the narrative section.

Trains

In the case of a crash involving a train, the following conventions are to be followed for:

- Locomotive (engine information) is entered in the vehicle information section.
- Engineer's information (name and address) is entered in the driver information section. (However, do not enter a Locomotive Engineer's driver license number).
- Railroad crossing crashes where a trafficway intersects a privately-owned railway crossing are not considered private property.

Header Fields

Electronic Reporting

- In general, these header fields should be filled out automatically by the electronic reporting application when the crash report is entered electronically.

Field 1: Page ___ of ___ Pages

PAGE ___ OF ___ PAGES

Enter the page number for this page (according to its location in the crash report package) in the first blank.

Enter the same number of total number of pages as on the first page of the crash report package (**Field 1: Page 1 of ___ Pages**) in the second blank.

For information on the order of pages in the crash report package, see *The DR3447 Crash Report Package* on page 17 of this manual.

Field 2: Case Number

Case #

Enter the same case number as on the first page of the crash report package.

Field 3: (Law Enforcement) Agency ORI

Agency ORI

Enter the same agency ORI of the reporting agency as on the first page of the crash report package.

Field 4: (Law Enforcement) Agency Name

Agency Name

Enter the same name of the reporting agency as on the first page of the crash report package.

Overall Fields

Field 5: Traffic Unit

Traffic Unit #	<table border="1"><tr><td></td><td></td></tr></table>		

Enter the Traffic Unit # for this vehicle.

The vehicle or non-motorist that was most at fault for the crash should be assigned the Traffic Unit # 1 being the most at fault for the crash. The other vehicles and/or non-motorists should be assigned subsequent consecutive numbers (2, 3, etc.)

See the section covering *Traffic Unit Number* on page 20 of this manual for the explanation of the Traffic Unit #.

Field 6: Hit and Run Check Box

Change(s):

- New

Rationale:

- To allow an amended report to update the driver / vehicle information if they are later identified without losing the information that the crash was Hit & Run.

Hit & Run <input type="checkbox"/>

Mark this box (enter an “X” or ✓) if the driver of the vehicle does not remain at the scene of a crash as required by statute.

Guidance

- The vehicle driven by such an operator/driver shall be listed as Vehicle #1 when the primary cause of the crash can be attributed to the operation of such vehicle and such vehicle may be referred to as the "run vehicle".
- As much information as possible about the “run vehicle” should be entered in the Traffic Unit/Motor Vehicle information fields on pages C and D.
- If the original report was submitted, and the driver of the "run vehicle" that left the scene is subsequently identified, a follow-up report must be submitted. This should be done even if the original report was submitted as being complete
- **However**, the hit and run check box should remain checked if the crash originated as a hit and run, even if the crash is later amended to indicate information about the run vehicle and driver on this page of the DR3447 package.
- If more than one vehicle involved in the crash qualifies as “Hit and Run”, then the above applies to each of those vehicles. Number the Traffic Units based on the most reasonable crash reconstruction.

Field 7: Non-Contact Vehicle Check Box

Non-Contact Vehicle <input type="checkbox"/>

Mark this box (enter an “X” or ✓) if the vehicle did not contact any other Traffic Unit involved in this crash.

Guidance

A “non-contact vehicle” is defined as a traffic unit which is involved in the circumstances of a crash but does not strike anything and is not struck. See the glossary for a definition and examples of a non-contact vehicle.

This would be the case, for example, if another driver had to swerve to avoid hitting it, but did not collide with it.

If a driver of a non-contact vehicle is cited or could be cited as a result of their contribution to the crash, the appropriate driver and/or vehicle information should be entered on this page as well as the narrative and diagram.

Driver Fields

Field 8: Driver's Name

(Driver) Last Name	First Name	MI
--------------------	------------	----

Enter the driver's last name, first name, and middle initial.

Follow the structure as defined in the section on Entering A Person's Name, on page 12.

If the vehicle was not occupied by a driver when the crash occurred, then leave this (and the other driver-related fields) blank.

Field 9: Driver's Phone Number

Phone

Enter a phone number, including the area code. If the phone number is unknown, do not enter "NONE". Instead, leave the field blank.

Field 10: Driver's Street Address

(Driver) Street Address	City	State	ZIP
-------------------------	------	-------	-----

Enter the driver's current street, route or P.O. Box address. The investigating officer should confirm the address of involved parties by asking them. Do not rely solely on the information given on a driver's license or registration.

Enter the city, state, and zip code. The standard two-letter abbreviations for states are listed in **Appendix B** and should be used when completing these fields. If a foreign country has a state or province listed in **Appendix C**, use the state or province rather than the country code.

Field 11: (Driver) Date of Birth

DOB

Enter the driver's date of birth following the same MM/DD/YYYY format.

Business Rules

- If the driver is a juvenile (under the age of 18) then **Field 25: Juvenile(s) Involved Check Box** on MAIN CRASH REPORT PAGE (Page A) must be checked.

Example: 05/15/1969

Field 12: Driver License Number

Driver License Number

Enter the driver's license number or state identification number. Use the original license number rather than a reissue number or a probationary number.

Guidance

What number to enter/when:

- If the license is under restraint, enter the PIN in the field.
- If an operator of a unit is not required to have a driver's license (e.g. train engineer), do not enter a license number in this field.
- If the driver has a valid driver's license and it is not in his possession, obtain a driving record and enter the driver's license number in this field.
- If there is no record of a driver's license, leave this field blank.
- If the driver is operating a military vehicle in the performance of his or her military duties at the time of the crash, the correct license to use is the government-issued license rather than one from a particular state.

Entering the appropriate number:

- A PIN can be entered with or without the embedded dashes. For example, either 92-045-2116 or 920452116 are acceptable.

Field 13: Unlicensed Driver Check Box

Change(s):

- New

Rationale:

- Clarify what to enter if driver does not have a driver's license, and why the Driver License Number field is left blank.

Unlicensed Driver <input type="checkbox"/>

Mark this box (enter an "X" or ✓) if this driver does not have a driver's license **and** no number can be obtained from a driving record.

NOTE: If the person's driver license has been suspended or revoked, their driver license number should be entered, and this checkbox should NOT be checked.

Validation Rules

If the Unlicensed Check Box is marked, then the Driver's License Number field should be blank.

Field 14: CDL (Type)

CDL

If driver has a Commercial Driver's License (CDL), enter the appropriate type: A, B, or C.

Field 15: (Driver License) State (or Country)

State

Enter the standard two-letter abbreviation of the state which issued the driver's license entered above. See **Appendix B** for a list of state codes.

If the license is issued by an authority outside the United States, enter the two-letter abbreviation for the country (or state/province) of issuance taken from **Appendix C**. If no license is shown, leave this field blank.

Field 16: Driver Sex

Sex

Enter the letter "**M**" for a male or the letter "**F**" for a female, or "**X**" for non-binary.

NOTE: Follow the gender as identified on the driver's license. (A transgender person can have that changed through a legal process.) As of November 30, 2018, the Colorado Division of Motor Vehicles (DMV) offers a third sex identifier, X (non-binary), on Colorado driver licenses, instruction permits and identification cards.

Field 17: (Driver) Email

Enter an email address that can be used to contact the driver. If no email address is given, do not enter "NONE". Instead, leave the field blank.

Field 18: Primary Violation

Enter the primary crash-related charge in this field (such as Failed to Yield Right of Way), not the DUI-related charges.

A primary crash-related charge is defined as a violation of the motor vehicle laws relating to vehicle movement and contributing to a crash.

Guidance

- Common primary crash-related charges include careless driving, careless driving caused injury, or careless driving caused death. In some areas of the state, Improper driving on a mountain highway also becomes an appropriate charge when driving in a manner inappropriately for mountainous terrain was a primary cause of the crash. Other charges can be primary (vehicular assault, vehicular homicide, reckless driving) based on officer discretion and the circumstances of the crash.
- An administrative violation, such as expired license plates, is considered a secondary violation under this definition and need not be listed on the crash report unless it is the only violation charged. Some jurisdictions may require that all violations charged be listed. If this is the case in your jurisdiction, the crash-related charge should be listed first on the report (for example, Careless Driving/No Valid Operator's License).
- Generally, deceased driver charges should not be listed on the DR3447; however, if the officer's agency requires a listing of charges or a for record only citation, the officer should follow agency policy in this regard.

NOTE: It is recommended that the other charges be listed in the narrative as this may be the only documentation the agency has to reference 5 to 10 years later for civil testimony.

Validation Rule

If this field is filled in, the next three fields must also be completed.

Field 19: DUI Check Box

DUI <input type="checkbox"/>

Mark this box (enter an “X” or ✓) if DUI, DUID or DWAI is charged.

Field 20: Violation Code

Violation Code

Enter the appropriate state statute or municipal ordinance number for the primary violation. If only an alcohol or drug related charge is applicable, enter that number here.

Guidance

Enter the most appropriate (most specific) infraction. Only use “Careless” if no other violation applies

Field 21: Citation Number

Citation Number

Enter a citation number, if any, which corresponds with the violation charged. If the charge was filed directly with the District Attorney, enter “**DIRECT FILE**”. If charges are pending, enter the word “**PENDING**”.

Field 22: Common Code

Common Code

Enter the appropriate common code for the primary violation entered above.

Vehicle Owner Fields

Field 23: Same Name Checkbox

Same Name <input type="checkbox"/>

If the name on the registration is the same as the driver, mark (enter an “X” or ✓ in) the **Same Name** check box. This will signify the registered owner was the driver of the vehicle.

Field 24: Vehicle Owner Name

Vehicle Owner Last Name	First Name	MI
-------------------------	------------	----

Enter the owner's last name, first name and middle initial.

Follow the structure as defined in the section on Entering A Person's Name, on page 12.

If the name shown on the registration is other than the driver, the information on the registration must be entered. When more than one party is indicated as owner, both names may be entered.

When a misuse of plates or other ownership irregularities are suspected, the reporting officer must determine the identity of the current vehicle owner, and the current vehicle owner's name is to be entered.

The definition of owner from Colorado Revised Statutes 42-1-102(66) is: "Owner" means a person who holds the legal title of a vehicle; or, if a vehicle is the subject of an agreement for the conditional sale or lease thereof with the right of purchase upon performance of the conditions stated in the agreement and with an immediate right of possession vested in the conditional vendee or lessee or if a mortgagor of a vehicle is entitled to possession, then such conditional vendee or lessee or mortgagor shall be deemed the owner for the purpose of articles 1 to 4 of this title. The term also includes "parties otherwise having lawful use or control or the right to use or control a vehicle for a period of thirty days or more."

When a lien holder is named first, do not use this name unless it is the only one listed.

Field 25: Same Address Checkbox

Same Addr. <input type="checkbox"/>
--

If the address indicated on the registration is the same as that for the driver, mark (enter an "X" or ✓ in) the **Same Address** checkbox.

Field 26: Vehicle Owner Street Address

Vehicle Owner Street Address	City	State	ZIP
------------------------------	------	-------	-----

Enter the vehicle owner's street, route or P.O. Box address along with the city, state, and zip code for that address.

Field 27: Insurance Company

Insurance Company

Enter the name of the insurance company insuring the vehicle. If the operator has no insurance or no proof of insurance, leave the insurance fields blank. If insurance is not required, enter "Not Required" in this field.

Guidance

- No Proof means the officer believes the driver has insurance, but does not have proof at the time of the crash, i.e., the date on the insurance card is expired.

Field 28: None Check Box

None

Mark this box (enter an "X" or ✓) if the operator admits to having no insurance, if the proof offered indicates the insurance has expired, or if you are able to ascertain that the operator does not have active insurance.

Field 29: No Proof Check Box

No Proof

Mark this box (enter an "X" or ✓) if the operator claims to have insurance but has no proof of the insurance.

Field 30: Expiration Date

Expiration Date

Enter the expiration date of the policy. Leave this field blank if the operator has no insurance, no proof of insurance, or if insurance is not required.

Field 31: Policy Number

Policy Number

Enter the insurance policy number of the company insuring the vehicle. Leave this field blank if the operator has no insurance, no proof of insurance, or if insurance is not required.

Vehicle Fields

Field 32: License Plate Number

License Plate No.

Enter the license plate that is attached to the vehicle. Do not use the tab or validation sticker number. Enter the license plate number even if it is expired.

Field 33: State or Country

Enter the appropriate two-letter abbreviation for the state or country which issued the license plate number. See Appendix B for a list of state codes, and Appendix C for country codes.

Field 34: Vehicle Identification Number

Enter the vehicle identification number. Verify that the number listed on the registration matches the number on the vehicle.

Field 35: Year

Field 1: Enter the year of manufacture of the vehicle, using the information from the registration if available. Use four digits.

Field 36: Make

Enter the make of the vehicle from the registration.

For example, Toyota.

Field 37: Model

Enter the model name or designation given to the vehicle

For example; Prius.

Field 38: Body Type

Enter the body type of the vehicle.

For example, enter “SD” for Sedan.

GUIDANCE

See **Appendix G** for the full set of Body Types.

Field 39: Color

Enter the color of the vehicle from the registration papers, unless the vehicle has been repainted. The standard color terms used by the Department of Revenue are to be used whenever possible.

For example: Red.

Guidance

For a list of colors, see **Appendix H**.

If the vehicle is more than one color, list the primary top color over the primary bottom color.

Vehicle Damage Fields

Field 40: No Damage Check Box

Change(s):

- Added a checkbox if the vehicle was not damaged by the crash

Rationale:

- Clarifies to the officer how to specify that no damage occurred to the vehicle (and why the Vehicle Damage Severity diagram has been left blank).

No Damage

Mark this box (enter an “X” or ✓) if the vehicle itself did not sustain any apparent damage due to the crash.

Field 41: Vehicle Damage Severity

Damage severity to either a vehicle is shown on this diagram by using the damage code numbers 1, 2, or 3 written within the marked-off sections.

- a. **1 - Slight** damage means scratches, minor dents, and cracked windows.
- b. **2 - Moderate** damage means moderate dents, windows out, etc.
- c. **3 - Severe** damage means major body/mechanical damage.

Damage to the windshield or the rear window should be shown in the roof section of the vehicle along with any damage to the top. Investigating officers should only code damage resulting from the crash being investigated. Old damage should not be shown.

Business Rules

- If the No Damage Check Box is checked, then no points on the vehicle may have any damage codes (1-3) entered.
- Zero (0) is not to be used to show no damage. Only blanks are to be used for areas with no damage on the vehicle.

Field 42: Towed

Change(s):

- Expanded from the previously limited **Towed due to damage** checkbox

Rationale:

- Clarifies to the officer what to enter in different conditions.
- Consistent with federal requirements for commercial motor vehicles.

Towed <input type="text"/>	00. Not towed 01. Towed Due to Disabling Damage 02. Towed, But Not Due to Disabling Damage
By:	
To:	

Enter the appropriate code in the field, corresponding to whether the vehicle was towed or not, and whether the damage incurred during the crash was disabling, requiring it to be towed. The possible codes are:

- 00. Not towed
- 01. Towed Due to Disabling Damage
- 02. Towed, But Not Due to Disabling Damage

Guidance

The FMCSA definition of *disabling damage* is:

- “Towed” means transported away from the scene by a tow truck or other motor vehicle.
- If the vehicle was not towed by the time the officer leaves the scene, then this should be marked as 00 Not Towed.
- Disabling damage means damage which precludes departure of a motor vehicle from the scene of the accident in its usual manner in daylight after simple repairs. Disabling damage includes damage to a motor vehicle that could have been driven but would have been further damaged if so driven. Disabling damage does **not** include:
 - Damage which can be remedied temporarily at the scene of the accident without special tools or parts.
 - Tire disablement without other damage even if no spare tire is available.
 - Headlamp or taillight damage.
 - Damage to turn signals, horn, or windshield wipers which makes them inoperative.

Field 43: (Towed) By

Towed <input type="text"/>	00. Not towed 01. Towed Due to Disabling Damage 02. Towed, But Not Due to Disabling Damage
By:	
To:	

Enter the name of the company that towed the vehicle.

Field 44: (Towed) To

Towed	00. Not towed
<input type="checkbox"/>	01. Towed Due to Disabling Damage
<input type="checkbox"/>	02. Towed, But Not Due to Disabling Damage
By:	
To:	

Enter the location to which the vehicle was towed.

If the storage location of the towed vehicle is different than the tow company's usual storage yard, also enter the storage location.

Trailer Fields

Change(s):

- Allow up to the maximum legal configuration to be entered
- Expanded the space to write down the information for trailers; VIN, license plate, Disabling Damage checkbox for each

Rationale:

- Make it easier for the officer; to enter all the trailer-related information in the right location, rather than going to the narrative.

Guidance

- The maximum number of trailers/dollies a vehicle may be pulling is five; with a configuration of a triple plus two dollies.
- All trailers and dollies should have VINs.
- The trailers/dollies should have license plate numbers, except perhaps dollies (though they should have VINs and most will have registration numbers as well).
- Only fill in the fields for which there are trailers/dollies.
- It is not required to specify what parts of a trailer have been damaged. It is only necessary to indicate if the trailer has suffered disabling damage.
- The Guidance regarding *Disabling Damage* given above also applies to the **Disabling Damage checkbox** for each trailer.

- If the trailer cargo was damaged, that can be noted in the narrative.

Validation Rules

- VIN and/or License Plate number should be filled out for the number of trailers identified in the Number of Trailers field.

Field 45: Number of Trailers

Number of Trailers:	
Trailer 1: VIN#	
License Plate:	Disabling Damage <input type="checkbox"/>

Enter the number of trailers (including dollies) pulled by the vehicle.

Field 46: Trailer Fields

Number of Trailers:	
Trailer 1: VIN#	
License Plate:	Disabling Damage <input type="checkbox"/>

Enter the Vehicle Identification Number (VIN) for each trailer/dolly if available.

Enter the License Plate numbers for each trailer/dolly if available.

Mark the Disabling Damage Check Box (enter an “X” or ✓) for each trailer/dolly if it sustained disabling damage due to the crash.

Guidance

Use the same FMCSA definition for *disabling damage* as for **Field 42: Towed** above.

Field 47: Vehicle Defect/Condition (Officer Opinion Only)

Change(s):

- Additional codes added for the vehicle load.

Rationale:

- To make it clearer for an officer when the issue was relative to the vehicle load,

VEHICLE DEFECT/CONDITION (OFFICER OPINION ONLY)	
00. No Vehicle Defects	08. Mechanical Failure
01. Defective Head Light(s)	09. Obstructed Window(s)
02. Defective Brake/Tail Light(s)	10. Improper Load
03. Defective Signaling Device	16. Cargo/Equipment Loss or Spill
04. Brakes Defective/Out of Adjustment	17. Cargo/Equipment Shift
05. Defective Tires	14. Parking Violation
06. Sudden Tire Failure	15. Other Defect(s) (Describe in Narrative)
07. Improper Tires for Conditions	

Enter the code that best describes any vehicle defect or condition that may have been a contributing factor in the crash. For example, if the heaviest cargo was not loaded at the end of the trailer, near the driver's cab, it could result in the rear of the trailer fishtailing in the event of external interference. This would be marked as **10. Improper Load**. If several defects/conditions were present, select the number of the most significant defect/condition.

The following changes were made to the selections for this field:

- The three selections 11. Spilled Load – Commercial Aggregate, 12. Spilled Load – Commercial Non-Aggregate, and 13. Spilled Load – Other were deleted.
- Two selections were added:
 - 16. Cargo/Equipment Loss or Spill for when there was any loss or spill of the load or of associated equipment, and
 - 17. Cargo/Equipment Shift for when there was any shift in the load or equipment that may have contributed to, or was otherwise involved in the crash.

Vehicle – To Complete Only for Fatalities

Field 48: Crash Avoidance Maneuvers

Change(s):

- Modified the codes available

Rationale:

- Simplified the choices for the officer

**CRASH AVOIDANCE
MANEUVER**

--	--

- 00. No Avoidance Maneuver
- 07. Braking
- 08. Steering
- 09. Steering and Braking
- 10. Accelerating
- 11. Steering and Accelerating
- 06. Other Avoidance Maneuver (Describe in Narrative)

Enter the code that best corresponds to evidence of any crash avoidance maneuver taken by the traffic units involved in the crash. If **06. Other Avoidance Maneuver** is selected, explain the maneuver in the narrative.

Field 49: Fire/Hazardous Materials Involvement

Change(s):

- Moved from Fatal Supplement

Rationale:

- Removes the need for a supplement in the event of a fatality (and the associated redundancy)

**FIRE/HAZARDOUS
MATERIALS INVOLVEMENT**

--	--

- 00. No Fire/No Haz-Mat Cargo
- 01. No Fire/Haz-Mat Cargo Not Involved
- 02. No Fire/Haz-Mat Incident
- 03. Vehicle Fire/No Haz-Mat Cargo
- 04. Vehicle Fire/Haz-Mat Cargo Not Involved
- 05. Vehicle Fire/Haz-Mat Incident

Enter the code that best describes fire or hazardous material involvement in the crash.

Note: Do not include fuel spilled from the vehicle fuel tank as Hazardous Materials Involvement.

Guidance

The codes are further explained below:

- 00. No Vehicle fire. Vehicle was not carrying hazmat cargo.
- 01. No Vehicle fire. Vehicle was carrying hazmat cargo, but it was not released.
- 02. No Vehicle fire. Vehicle released hazmat cargo.
- 03. Vehicle caught fire. Vehicle was not carrying hazmat cargo.

- 04. Vehicle caught fire. Vehicle was carrying hazmat cargo, but it was not involved in the fire, nor was it released.
- 05. Vehicle caught fire. Vehicle's hazmat cargo was either released or involved in the fire.

Driver/Occupant Fields

Change(s):

- The first row is for the driver
- The fatal information is incorporated into the fields
- Additional space available for the name and address

Rationale:

- Facilitate the entry of data for the occupants of the vehicle
- Remove the need for a fatal supplement (and the associated redundancy)

The driver/occupant fields, located in the bottom half of the Traffic Unit/Vehicle page (page C) of the **DR3447**, must be completed for reportable occupants of this vehicle.

Guidance

- Use the INVOLVED PERSON OVERLAY (Overlay A) to fill out these fields.
- Enter data only for occupants of this vehicle in these fields. Do NOT enter data for occupants of another vehicle.
- If there are more than 4 occupants (including the driver) in this vehicle, then use an optional ADDITIONAL MOTOR VEHICLE OCCUPANTS (Optional Supplement A) for the additional occupants.
- The detailed occupant information should be filled out for all persons in or on this vehicle **except for uninjured** bus passengers or **uninjured** railway passengers.
- For uninjured busses or railway passengers, do the following:
 - In one row of the Occupant Details section (or in one row of the ADDITIONAL MOTOR VEHICLE OCCUPANTS (Optional Supplement A)), enter the total number of uninjured passengers in the Name/Address field. For example, enter “*10 uninjured passengers*”.
 - If the bus or railway vehicle provided the option of seat belts, then enter the number of uninjured passengers that were **belted** in another row of the Occupant Details section (or

in one row of the ADDITIONAL MOTOR VEHICLE OCCUPANTS (Optional Supplement A)) in the Name/Address field. For example, enter “7 uninjured, belted passengers”.

See the Overlay A description on the following page for reference.

Guidance

Regarding which occupants should be listed:

- If a bus or railway passenger originally was thought to be uninjured, but an injury later shows up, an amended report should be filed, with this individual added to the DR3447 as soon as possible after the discovery/diagnosis of the crash related injury.
- If a juvenile is involved (since there is special consideration for juvenile privacy), the juvenile individual's data should be filled out in full (including names and age, DOB), with the juvenile box checked so each agency can follow redaction rules for juvenile records.

Figure 16: Involved Person Overlay (Overlay A) – For Reference

Field 50: Name/Address

DRIVER NAME AND ADDRESS ARE ABOVE

Enter the name and address. In the first row, this information applies to the driver, which should already be recorded in the driver section and thus does not have to be filled out here. The next three rows are for other reportable occupants, and the Name/Address should be filled out for them.

Guidance

- If the vehicle is a bus or railway, then the name/address need only be entered for the fatal and injured parties (classifications 02, 03, and 04).
- If an officer has only obtained a partial name, enter only that information obtained. If an officer wasn't able to obtain a name, enter "unknown".
- If further investigation into the person's identification is pending (e.g. if such will be done at a hospital or by the coroner), add a note in the narrative indicating steps for pending identification.
- If no further identification will be possible (in the case of a PD turned fatal with an out of state passenger who was not otherwise identified during investigation of the PD crash), add a note in the narrative indicating that situation.

Field 51: A-Position in/on Vehicle

This field applies to the driver and all passengers of the motor vehicle.

This field must be completed for all reportable occupants.

Enter the position of the occupant or passenger as per the diagram provided on the INVOLVED PERSON OVERLAY (Overlay A). All bus passengers are classified as 10.

Special cases:

- For bus passengers, enter **10. Other Enclosed passenger**.
- For people individuals in a pickup truck bed, enter **11. Unenclosed passenger**.
- For a motorcycle passenger, enter 04 (or 04 and 07 for motorcycles with one driver and two passengers).

Field 52: B-Driving Restrictions

B

This field only applies to driver (which should be in the first row).

This field must be completed for drivers of the vehicles with information pertaining to their compliance with driving restrictions.

If driver has no restrictions, enter 00. None. If restrictions did apply, then enter the code that best corresponds to the driver's compliance with the restriction(s). "Restrictions" means restrictions such as corrective lenses, left side mirror, interlock, etc., not driving suspensions.

Note the addition of the codes for GDL 6-months and GDL 12-months restrictions.

Field 53: C-Driving Endorsements

C

This field only applies to driver (which should be in the first row).

This field must be completed for the driver of the vehicle only if endorsements are necessary for the type of vehicle, i.e. motorcycle, hazmat, etc.

If no endorsements are required, enter **00. None**. If endorsements are required, then enter the code that best corresponds to the driver's compliance with the endorsement requirements.

Field 54: D-Ejection

D

This field applies to the driver and all passengers of the motor vehicle.

Enter the code **00** if the occupant was not ejected. Enter the code **01** if the physical forces of the collision caused partial ejection of a major or significant portion of the body, for example, the head or the torso. Enter the code **02** if the occupant was fully ejected. Enter the code **03** if the occupant had to be extricated from the vehicle.

Field 55: E-Ejection Path

E

This field applies to the driver and all passengers of the motor vehicle.

Enter the code corresponding to the path of ejection followed by the ejected (partially or completely) occupant (only applicable if 01 or 02 was entered for Ejection).

When the motor vehicle is a motorcycle, enter 10. Motorcycle.

Field 56: F1-Safety Equipment – Available

Change(s):

- Separated **Safety Equipment – Available** from **Safety Equipment – Used**.
- Removed codes that were not applicable to motorized vehicles (i.e. move the codes applicable to a non-motorist to that section of the report).

Rationale:

- Make easier for officer to determine which codes to enter.

F1
<input type="text"/>

This field applies to the driver and all passengers of the motor vehicle.

Enter the code that describes what type of restraint system was available in the traffic unit. If the traffic unit was a motorcycle, enter **F-Not Applicable**.

Field 57: F2-Safety Equipment – Used

F2
<input type="text"/>

This field applies to the driver and all passengers of the motor vehicle.

Enter the number that describes how the system was used.

In the case of a motorcycle, “Used” refers to eye protection.

Field 58: F3-Safety Equipment – Helmet

F3
<input type="text"/>

This field must be completed for all persons on a motorcycle.

For motor vehicles other than a motorcycle, enter the code **A-Not Applicable**. For a motorcycle, enter a code, B through F, depending whether and how the helmet was used.

Examples

- For a driver who had a lap/shoulder combination restraint and had the lap belt on but put the shoulder portion behind his back, the data would be entered as follows:
 - Field 56: F1-Safety Equipment – Available = B-shoulder and lap belt,
 - Field 57:F2-Safety Equipment – Used = 02. improperly used
 - Field 58: F3-Safety Equipment – Helmet = A-Not Applicable.
- A 4-year-old is belted into a vehicle without a child safety seat. Data for that occupant would be entered as:
 - Field 56: F1-Safety Equipment – Available = B-shoulder and lap belt,
 - Field 57:F2-Safety Equipment – Used = 02. improperly used
 - Field 58: F3-Safety Equipment – Helmet = A-Not Applicable.
- Data for a passenger in a bus with no available occupant restraints would be entered as:
 - Field 56: F1-Safety Equipment – Available = A-none
 - Field 57:F2-Safety Equipment – Used = 00. not used
 - Field 58: F3-Safety Equipment – Helmet = A-Not Applicable.
- Data for a driver of a classic car with no safety equipment installed would be entered as:
 - Field 56: F1-Safety Equipment – Available = A-none
 - Field 57:F2-Safety Equipment – Used = 00. not used
 - Field 58: F3-Safety Equipment – Helmet = A-Not Applicable.
- Data for a motorcyclist wearing protective eyewear but with a helmet strapped to the back seat of the cycle would be entered as:
 - Field 56: F1-Safety Equipment – Available = F-N/A (e.g. motorcycle)
 - Field 57:F2-Safety Equipment – Used = 01. (eye protection) properly used
 - Field 58: F3-Safety Equipment – Helmet = C-available, not used
- It is determined that a motorcyclist was wearing a helmet that was not strapped securely around the head, and the goggles were found stuffed in a saddlebag. This would be entered as:
 - Field 56: F1-Safety Equipment – Available = F-N/A (e.g. motorcycle)
 - Field 57:F2-Safety Equipment – Used = 00. (eye protection) Not Used
 - Field 58: F3-Safety Equipment – Helmet = D-helmet improperly used

- A motorcyclist has glasses perched atop his head and no helmet. This would be entered as:
 - Field 56: F1-Safety Equipment – Available = F-N/A (e.g. motorcycle)
 - Field 57:F2-Safety Equipment – Used = 02. (eye protection) improperly used
 - Field 58: F3-Safety Equipment – Helmet = B-no helmet

Field 59: AGE

AGE	

Enter the individual's age in years. Months are not included. Children under the age of one are entered as 0.

This field may be left blank if a) the information requested applies to the driver, b) the Date of Birth is already recorded in the driver section, and c) you enter "SAME AS DRIVER" in the name/address field.

This field must be completed for all parties involved in a crash except uninjured bus or railway passengers.

Business Rules

- If the occupant is a juvenile (under the age of 18) then **Field 25:Juvenile(s) Involved Check Box** on MAIN CRASH REPORT PAGE (Page A) must be checked.

Occupant Airbag Fields

This section is for whether an airbag has deployed and what type of airbag it was,

Field 60: G1-Airbag Deployment

G1	

Enter the code that describes whether one or more airbags deployed at this position relative to other positions.

Guidance

The available codes are described:

- 00 – The vehicle is not equipped with airbags at this position.
- 01 – The vehicle is equipped with airbags at this position, but they didn't deploy.
- 02 – One or more airbags deployed at this position, but not at any other position.

- 03 – One or more airbags deployed at this position, and one or more airbags also deployed at other positions in the vehicle.
- 04 – No airbags deployed at this position, but one or more did deploy at other positions.
- 05 – It is unknown how the airbags deployed.

Examples

The driver's and right front passenger's front airbags deployed:

Position (A)	Airbag Deployment (G1)	Airbag Type (G2)
01	03	B
03	03	B

The driver's front airbag deploys. There is a passenger in position 03, and the airbag does not deploy:

Position	Airbag Deployment (G1)	Airbag Type (G2)
01	02	B
03	04	B

The driver's front airbag deploys. The passenger's side airbag deploys:

Position	Airbag Deployment (G1)	Airbag Type (G2)
01	03	B
03	03	C

Field 61: G2-Airbag Type

Enter the code that specifies which type of airbag(s) deployed at the position occupied by the person. Use code **A-None**, either if a vehicle not equipped with an airbag or if it was equipped but did not deploy. Code **F-Multiple**, refers to more than one airbag deploying at the position, i.e., both the front and side at passenger position 03.

Note some new types of airbags that have been added:

- G-Knee: Knee airbags are installed in the lower portion of the dashboard, directly in front of the passenger's knees. When a collision occurs, they inflate to fill the space between the dashboard and the passenger's lower legs. (From <http://www.takata.com/en/products/airbag05.html>)

- H-Air Belt: The inflatable seat belts deploy upon impact of a certain force, quickly expanding and providing added restraint and protection for people riding in the back seat of cars.

Person Injury Severity Field

This field identifies how seriously a person (occupant or non-motorist) was injured.

NOTE: While the codes have not changed, the terms used with the codes have changed to meet federal requirements.

Field 62: H-Injury Severity

H

Enter the code which best describes the injury severity to the party in question.

Guidance

The standard MMUCC definitions for when to use each injury classification is as follows:

- **00. No apparent injury (O)**

No apparent injury is a situation where there is no reason to believe that the person received any bodily harm from the motor vehicle crash. There is no physical evidence of injury and the person does not report any change in normal function.

Note: If a party is transported and is subsequently examined and found to have no injuries, the injury severity for that party would be classified as No Injury.

- **01. Possible injury (C)**

A possible injury is any injury reported or claimed which is not a fatal, suspected serious or suspected minor injury. Examples include momentary loss of consciousness, claim of injury, limping, or complaint of pain or nausea. Possible injuries are those which are reported by the person or are indicated by his/her behavior, but no wounds or injuries are readily evident.

Note: If a party is transported and is subsequently examined and found to have no injuries, the injury severity for that party would be classified as Possible Injury.

- **02. Suspected Minor Injury (B)**

A minor injury is any injury that is evident at the scene of the crash, other than fatal or serious injuries. Examples include lump on the head, abrasions, bruises, minor lacerations (cuts on the skin surface with minimal bleeding and no exposure of deeper tissue/muscle).

- **03. Suspected Serious Injury (A)**

A suspected serious injury is any injury other than fatal which presents one or more of the following symptoms:

- Severe laceration resulting in exposure of underlying tissues/muscle/organs or resulting in significant loss of blood.
- Broken or distorted extremity (arm or leg).
- Crush injuries.
- Suspected skull, chest or abdominal injury other than bruises or minor lacerations.
- Significant burns (second and third degree burns over 10% or more of the body).
- Unconsciousness when taken from the crash scene.
- Paralysis.

The following chart from NHTSA provides additional examples of what would qualify for a Suspected Serious Injury.

Figure 17: Suspected Serious Injury Classifications

<p>UNCONSCIOUSNESS</p> <ul style="list-style-type: none"> <input type="checkbox"/> Breathing but not awake and not talking <ul style="list-style-type: none"> ▪ Only qualifies if victim remains unconscious when taken from scene 	<p>SIGNIFICANT BURNS</p> <ul style="list-style-type: none"> <input type="checkbox"/> Second- or third-degree burns on ten percent of body (majority of extremity, chest or back)
<p>PARALYSIS</p> <ul style="list-style-type: none"> <input type="checkbox"/> Loss of movement 	<p>SEVERE LACERATION</p> <ul style="list-style-type: none"> <input type="checkbox"/> Exposure of underlying tissue and/or oozing and active bleeding
<p>CRUSH INJURIES</p> <ul style="list-style-type: none"> <input type="checkbox"/> Part of the body is pinned or trapped <ul style="list-style-type: none"> ▪ Victim cannot escape 	<p>BROKEN OR DISTORTED EXTREMITIES</p> <ul style="list-style-type: none"> <input type="checkbox"/> Limb is deformed <input type="checkbox"/> Can see bone
<p>SKULL, CHEST, OR ABDOMINAL INJURIES</p> <ul style="list-style-type: none"> <input type="checkbox"/> Confused or acts irrational or unusual <ul style="list-style-type: none"> ▪ Impression on windshield might indicate a head injury <input type="checkbox"/> Bruising, swelling, bleeding, or deformities of chest or abdomen <input type="checkbox"/> Bulging eyes or veins popping in the neck 	<p>➔ When in doubt, ask EMS personnel for assistance</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>U.S. Department of Transportation Federal Highway Administration</p> </div> <div style="text-align: center;">  <p>NHTSA National Highway Traffic Safety Administration</p> </div> </div> <p style="font-size: small;">Model Minimum Uniform Crash Criteria (MMUCC) 4th Edition April 2017 • FHWA-SA-17-045</p>

• **04. Fatal Injury (K)**

A fatal injury is any injury that results in death within 30 days after the crash in which the injury occurred. If the person did not die at the scene but died within 30 days of the motor vehicle crash in which the injury occurred, the injury classification should be changed from the attribute previously assigned to the attribute “Fatal Injury”.

Refer to the section on **What Constitutes a Crash Fatality** starting on page 13 for a working definition of what is considered a fatality with respect to the DR3447 crash report.

Impairment Fields

This section is for enhanced information regarding suspected alcohol, marijuana, or drug use involved in the crash.

Field 63: I-Alcohol Suspected (Officer Opinion Only)

Enter the code that best corresponds to whether or not other alcohol was suspected, and why.

Guidance

- If you suspect alcohol was involved, enter whichever code **01** through **05** that best describes how you came to suspect alcohol.
- If you did not suspect alcohol was involved, enter whichever code **06** through **10** that best describes how you came to that conclusion.

Explanation of Terms:

- “**PBT**” means Preliminary Breath Test.
- “**SFST**” means behavior of the driver observed during Standardized Field Sobriety Tests.
- “**Observed**” means physical symptoms heard or seen by the officer during investigation, such as slurred speech, staggering, or admissions of alcohol or drug use by the driver, or other physical evidence.

Hierarchy of selections 01 through 03:

- **01** - The use of a PBT takes priority over an SFST or other observations. Without a PBT, an SFST takes priority over other observations.
- **02** - SFSTs are observations of a driver as the result of a Standardized Field Sobriety Test.
- **03** - (Observed) are behaviors, other than an SFST, made during the course of the investigation. These include slurred speech, staggering, admissions of drinking, or other physical evidence.

Examples of alcohol suspected/not suspected:

- While talking to a driver involved in the crash, it is observed that his eyes are bloodshot and his speech is slurred. He has trouble walking back to his car to get his registration. Enter code **03**.
- The driver is transported before you arrive on scene. Empty beer cans are strewn about and the inside of the car smells like of stale beer. Enter code **03**.

- The driver is transported before you arrive on scene. The ambulance attendants note the odor of an alcoholic beverage on the driver's breath, along with nystagmus (repetitive, uncontrolled eye movements) and informs you. Enter code **05**.
- While talking to the driver, indications of intoxication are observed. He submits to a PBT and the reading comes back as 0.148. Enter code 01. Note: even though your suspicions are raised through observations, any time a PBT is used, you should enter either a **01** or a **06**.
- As you talk to the driver, you observe no indications of intoxication. Enter **08**.

Field 64: J-Tested for Alcohol

J	

Enter the code that describes what type of test was given to determine alcohol use.

NOTE: Several additional codes have been added with respect to the type of test performed by the coroner.

Field 65: K-Marijuana Suspected (Officer Opinion Only)

K	

Enter the code that applies to the Officer's suspicion regarding use of marijuana by the person.

NOTE: Marijuana is still considered a drug. It is pulled out separately in order to gather crash information specifically associated with marijuana in the context of the recent legalization by the State.

Field 66: L-Tested for Marijuana

L	

Enter the code that describes what type of test was given/requested to determine marijuana use.

NOTE: Several additional codes have been added with respect to the type of test performed by the coroner.

Field 67: M-Other Drug/Impairment Suspected (Officer Opinion Only)

M	

As pertains to Alcohol Suspected, enter the code that best corresponds to whether or not other drugs (besides marijuana) were suspected, and why.

- Numbers **01** through **04** apply to "suspected".
- Numbers **05** and **08** apply to "not suspected".

A **DRE** evaluation takes precedence over an SFST and an SFST takes precedence over other observations. For example, if both a SFST and a DRE evaluation were performed, note **01. Drug Recognition Expert** (if the evaluation was positive) or **02. Drug Recognition Expert** (if the evaluation was negative).

Field 68: N-Tested for Other Drugs

N
<input type="checkbox"/>

Enter the code that describes what type of test was given/requested to determine drug use.

NOTE: The codes for breath and urine have been deleted, as these are not applicable. Several additional codes have been added with respect to the type of test performed by the coroner.

Field 69: Sex

SEX
<input type="text"/>

Enter the letter "**M**" for a male or the letter "**F**" for a female, or "**X**" for non-binary.

NOTE: Follow the gender as identified on the driver's license. (A transgender person can have that changed through a legal process.) As of November 30, 2018, the Colorado Division of Motor Vehicles (DMV) offers a third sex identifier, X (non-binary), on Colorado driver licenses, instruction permits and identification cards.

This field may be left blank if a) the information requested applies to the driver, b) that information is already recorded in the driver section, and c) you enter "SAME AS DRIVER" in the name/address field.

This field must be used for all parties involved in a crash, except uninjured bus or railway passengers.

To Complete Only for Fatalities or Certain Injuries

This section to be filled out only for a person transported from the crash scene for:

- A Fatality, or
- A Suspected Serious Injury, or
- An injury related to a CMV crash

Please refer to page 15 for a working definition of what constitutes a serious injury.

Field 70: EMS Trip

EMS Trip #

Enter the Trip Number as provided by the EMS staff.

Field 71: Taken To

Taken To

Enter the location where the occupant was taken (for example, Lutheran Hospital, Swan Funeral Home, or Denver Coroner).

If the individual was transported by both ambulance and air, then enter 02. Air. If some other mode of transportation (besides ambulance or air), then enter 04. Other, and describe in the narrative.

To Complete Only for Fatalities

Field 72: AA-Dead at Scene

AA

Enter the code corresponding to whether the person died at the scene (and was not transported for treatment).

- Enter **00** for **No**
- Enter **01** for **Yes**

Field 73: BB-Transported By

BB

Enter the code for the mode use to transport the individual.

Field 74: Expired Date and Time

Enter the pronounced date and time of death for all fatalities. If the death occurred at the scene, and the time is unknown, use the date and time of the crash.

Expired Date
Expired Time

Use the standard format MM/DD/YYYY to fill in this field. **Example:** 05/08/2005.

Enter the pronounced date and time of death for all fatalities. If the death occurred at the scene, and the time is unknown, use the date and time of the crash.

Enter the time using the 24-hour clock system. Do not use a colon.

Example: If death occurred at 2:43 PM, the time would be entered as "1443".

If the date of death is known, but the time of pronouncement is unknown, provide the death date and leave the time of death blank.

Example: If a death was delayed by several days and there was no easily obtainable record of the time of death, provide the date of death with no time of death.

TRAFFIC UNIT/GENERAL VEHICLE AND CMV (Page D)

This page applies to Traffic Units that are motorized vehicles (whether in transport, parked, stopped, or non-contact), and covers additional information on the vehicle and driver as well as CMV related information.

For each motor vehicle involved in the crash, there will be one copy of this page to accompany the copy of the MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C). Together, these two pages (Page C and Page D) cover all the information to be collected on each motorized vehicle involved in the crash.

In the DR3447 package, these pages will follow pages A and B, and each Page D will follow the corresponding Page C.

For detailed information regarding building the DR3447 package, see the section **on The DR3447 Crash Report Package** on page 17.

Note: These fields used to be found on the right side of Overlay A and on Overlay B for the DR2447.

Figure 18: Page D – With Reference Numbers

PAGE D

DR 3447 (11/09/18)

TRAFFIC UNIT/GENERAL VEHICLE AND CMV ¹ PAGE ___ OF ___ PAGES

Traffic Unit # 5 <input type="text"/>		Case # 2 <input type="text"/>		Agency ORI 3 <input type="text"/>		Agency Name 4 <input type="text"/>

Header Fields

Electronic Reporting

- In general, these header fields should be filled out automatically by the electronic reporting application when the crash report is entered electronically.

Field 1: Page ___ of ___ Pages

PAGE ___ OF ___ PAGES

Enter the page number for this page (according to its location in the crash report package) in the first blank.

Enter the same number of total number of pages as on the first page of the crash report package (**Field 1: Page 1 of ___ Pages**) in the second blank.

For information on the order of pages in the crash report package, see *The DR3447 Crash Report Package* on page 17 of this manual.

Field 2: Case Number

Case #

Enter the same case number as on the first page of the crash report package.

Field 3: (Law Enforcement) Agency ORI

Agency ORI

Enter the same agency ORI of the reporting agency as on the first page of the crash report package.

Enter the same name of the reporting agency as on the first page of the crash report package.

Field 4: (Law Enforcement) Agency Name

Agency Name

Enter the same name of the reporting agency as on the first page of the crash report package.

General Vehicle Data Fields

Field 5: Traffic Unit

Traffic Unit #	<input type="text"/>	<input type="text"/>
----------------	----------------------	----------------------

Enter the same Traffic Unit # as for the MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C) that corresponds to this vehicle (see **Field 5: Traffic Unit #**).

The vehicle or non-motorist that was most at fault for the crash should be assigned the Traffic Unit # 1 being the most at fault for the crash. The other vehicles and/or non-motorists should be assigned subsequent consecutive numbers (2, 3, etc.)

See Section **Traffic Unit Number** on page 20 of this manual for the explanation of the Traffic Unit #.

Field 6: Vehicle Type

Change(s):

- Added some codes for different vehicle types
- Removed non-motorist types (e.g. bicycle)
- Removed the codes including trailers
- Separated vehicle type from function (see below)

Rationale:

- To make it easier for the officer to determine what code should be entered for the type of vehicle.

<input type="text"/>	VEHICLE TYPE	03. Non-School Bus (9 occupants or more including driver) in commerce	15. Farm Equipment
		04. Transit Bus	20. Working Vehicle/Equipment
	CMV SECTIONS REQUIRED	VEHICLES UNDER THE GVWR/GCWR THRESHOLD	OTHER VEHICLE
	01. Medium/Heavy Trucks GVWR/GCWR between 10,001 and 16,000	05. Passenger Car/Passenger Van	17. Light Rail
	27. Medium/Heavy Trucks GVWR/GCWR 16,001 or over	07. Pickup Truck/Utility Van	21. Heavy Train
	02. School Bus (all school buses)	09. SUV	23. Off Highway Vehicle/ATV
		11. Motor Home	24. Snowmobile
		12. Motorcycle	25. Low Speed Vehicle
		28. Autocycle	18. Other Vehicle Type (Describe in Narrative)
			16. Unknown (Hit and Run Only)

Enter the code which best describes the type of vehicle.

Guidance

- If the vehicle is present (or the driver is in custody), then enter the corresponding code.
- If this vehicle left the scene, and is not known, then enter 16. Unknown.
 - This field corresponds to the **body type** of the vehicle itself. The next field - **Special Function of Motor Vehicle in Transport** - addresses **what the vehicle is used for**.
- Note that the weight threshold for vehicles to be considered CMV has been modified in Colorado, and the codes have been updated to reflect that:
 - 01. Medium/Heavy Trucks, GVWR/GCWR between 10,001 and 16,000
 - 27. Medium/Heavy Trucks, GVWR/GCWR 16,001 or over

NOTE: The above weight limits are applicable even if the vehicle is not a commercial motor vehicle. Those codes should be entered even if for a private vehicle.

- Code 02 corresponds to the familiar body shape of a school bus (whether colored yellow or another color). This code refers to the body type, *whether or not* the vehicle was being used to transport students to or from school.
- Code 03 should be used for any kind of shuttle bus or van that is not a school bus body type
- Codes 05, 07, 09, 11, 12, 15, and 20 correspond to vehicles under the CMV GVWR/GCWR thresholds.
- Code 20. Working Vehicle/Equipment such as snow plows, construction/maintenance equipment.
- 17. Light rail corresponds to RTD Light Rail or commuter rail.
- Code 21. Heavy Train such as BNSF or Union Pacific, or AMTRAK trains (as opposed to RTD Light Rail or commuter rail).
- If the code 23. Off Highway Vehicle/ATV is entered, then the specific type of off-highway vehicle should be described in the narrative.
- The code 24. Snowmobile corresponds to a snowmobile involved in a reportable crash.
- The code 25. Low Speed Vehicle includes such types as a “tuk-tuk” and some kinds of “neighborhood vehicles”.
- If code 18. Other is entered, describe the vehicle type in the narrative.

NOTE: For definitions of GVWR (Gross Vehicle Weight Rating) and GCWR (Gross Combination Weight Rating), see the Commercial Motor Vehicle Data on page 140.

Field 7: Special Function of Motor Vehicle in Transport

Change(s):

- New (separated the function from the vehicle/body type above)

Rationale:

- Make it easier for the officer to determine which codes to select based on how the vehicle is being used (which is a different aspect than what type of vehicle it is).

SPECIAL FUNCTION OF MOTOR VEHICLE IN TRANSPORT	
<input type="checkbox"/> <input type="checkbox"/> 00. No Special Function 01. Vehicle Transporting Students To/From School 02. Bus – Transit 03. Bus – Charter 04. Bus – Shuttle 05. Bus – Other 06. Construction Equipment 07. Farm Equipment 08. Farm Vehicle	09. Ambulance 10. Police 11. Fire Truck 12. Non-Transport Emergency Services Vehicle 13. Safety Service Patrols – Incident Response 14. Towing – Incident Response 15. Other Incident Response 16. Highway/Maintenance 17. Truck Acting as Crash Attenuator 18. Public Utility 19. Military 20. Rental Truck 21. Taxi 22. Vehicle Used for Electronic Ride-hailing (Uber, Lyft etc.) 23. Other (Describe in Narrative)
Emergency Lights Activated <input type="checkbox"/>	

Enter the code which best describes the purpose for which the vehicle was being used (which may differ significantly from the type of vehicle).

Guidance

In order to highlight the differences between **Field 6: Vehicle Type** and **Field 7: Special Function of Motor Vehicle in Transport**, the following examples are given in the pictures below:

- For all three vehicles, the Vehicle Type would be 07. Pickup/Utility Van.
- For the photo on the left, the Special Function would be 09. Ambulance, for the photo in the middle would be 11. Fire Truck, and for the photo on the right would be 08. Farm Vehicle

09

11

08

In order to clarify the rules regarding the special case of school buses, the following points are offered:

- The body type of “School Bus” refers to the classic yellow bus, as in the picture below.

- A van, such as the one in the picture below, used for a school function would be coded with Traffic Unit Type = 03. Non-school bus, but with Special Function = 02. Vehicle Transporting Students To/From School.

- A school bus, whether modified or not, and whether owned by a school district or not, that is being used for a non-school function it would be coded with Traffic Unit Type = 02. School Bus, but with Special Function = 03. Bus – Charter (or other function, if appropriate).

Field 8: Emergency Lights Activated Check box

Change(s):

- New

Rationale:

- To help the officer to identify between a vehicle that is responding to an emergency or just on the road.

Emergency Lights Activated

Mark this box (enter an “X” or ✓) if this vehicle was an emergency vehicle, and the warning lights (and/or siren or other indicators) were activated.

The following are examples from Colorado Statute identifying service vehicles that would be considered in-service (and the Emergency Lights Activated check box should be checked):

- Authorized emergency vehicle that is giving a visual signal by means of flashing, rotating, or oscillating red, blue, or white lights
- A towing carrier vehicle that is giving a visual signal by means of flashing, rotating, or oscillating yellow lights
- A maintenance, repair, or construction vehicle with yellow lights

In the following situations, the service vehicles should not have their lights activated, and would not be considered in-service and the Emergency Lights Activated check box should not be checked:

- A fire engine being taken to a garage for repairs.
- An ambulance going to get the gas tank filled up.
- A police car being used to go get lunch.
- An emergency vehicle clearly marked as out of service.
- A snow plow that is not actively plowing but is returning from performing its operation.

Field 9: Direction of Travel - Prior to Impact/Prior to Turning Movement

<input type="text"/>	DIRECTION OF TRAVEL - PRIOR TO IMPACT (PRIOR TO TURNING MOVEMENT)			
	01. North	03. East	05. South	07. West
	02. Northeast	04. Southeast	06. Southwest	08. Northwest

Enter the code which designates the general direction the vehicle was traveling just prior to any turning movement prior to impact.

Guidance

If the vehicle was in the process of turning, then the direction of travel of the vehicle **before** the turn is the direction to enter.

For Colorado highways, regardless of compass direction or switchbacks, "direction" is defined as follows:

- Odd numbered highways are **usually** designated north and south. Milepoints **usually** increase from south to north.
- Even numbered highways are **usually** designated east and west. Milepoints **usually** increase from west to east.
- For roadways that do not follow this general definition, use the direction definition specific to the roadway in question. Example, Colorado Blvd, SH-2. The highway in places is labeled N/S and in other places is labeled E/W. The same is true for US-285 (E and W Hampden Ave) and CO-30 (S Havana St) as mentioned elsewhere.

Examples

- If the vehicle was traveling north and turned left at an intersection where it collided with a vehicle traveling south, then the direction of travel for this vehicle should be entered as 01. North.
- Berthoud Pass, Colorado 40, consists of numerous switchbacks. Vehicles will be classified as headed east or west, depending on which travel lane they were in and regardless of the direction of a specific stretch of the highway.
- Colorado 7, between Brighton and Lafayette, runs east and west by compass. However, it is still labeled north or south for direction of travel.
- The direction should match the direction written in the narrative. It does not necessarily have to match the direction shown in the diagram. If the vehicle was turning, the direction is defined as the direction of travel just prior to the turning movement. If the vehicle was backing, the direction of travel will be the direction the vehicle is backing.

Field 10: Vehicle Movement - Prior To Impact

Change(s):

- Added two codes for additional types of movement.

Rationale:

- To allow the officer to select those additional movements that could contribute to a crash.

VEHICLE MOVEMENT - PRIOR TO IMPACT		
01. Going Straight	06. Making U-Turn	12. Swerve/Avoidance
02. Slowing	07. Passing	13. Weaving
03. Stopped in Traffic	08. Backing	14. Out of Control
04. Making Right Turn	09. Entering/Leaving Parked Position	15. Traveled Wrong Way
05. Making Left Turn	10. Parked	17. Entering Traffic Way/Merge
	11. Changing Lanes	18. Negotiating a Curve
		16. Other (Describe in Narrative)

Enter the code which best describes the movement of the vehicle prior to impact.

Field 11: Roadway Speed Limit

ROADWAY SPEED LIMIT
MPH

Enter the posted or legal speed limit for the roadway on which the vehicle was traveling.

White speed limit signs are regulatory. Yellow speed limit signs are advisory. In most cases, you will use the white speed limit sign closest to the first harmful event to complete this field.

Field 12: Estimated Vehicle Speed

ESTIMATED VEHICLE SPEED
MPH

Enter the speed of the vehicle immediately prior to the crash or the first difficulty or event leading to the crash, as estimated by the officer (rather than just stated by the driver).

NOTE: This information is used to develop traffic safety programs and is used by highway engineers to determine appropriate speed limits for a roadway.

Examples

- A vehicle hit a patch of ice which caused it to lose traction and fish tail. The driver then over corrected and went off the road and overturned. The vehicle speed of interest is when the vehicle hit the patch of ice.
- A vehicle started veering into the opposing lane when the driver slammed on the brakes before hitting an oncoming vehicle.

Appendix I contains information to assist in determining estimated vehicle speed based on skid marks and pavement type.

Electronic Reporting

The calculations and tables in Appendix I could be implemented in the application to facilitate the estimation of vehicle speed.

Field 13: Driver-Stated Speed

Change(s):

- New

Rationale:

- Since an officer cannot always estimate the speed, and instead often relies on the driver's statement.

DRIVER'S STATED SPEED
MPH

Enter the speed of the vehicle immediately prior to the crash or the first difficulty or event leading to the crash, as stated by the driver.

Guidance

- If no statement is given by the driver as to the vehicle speed, then leave this field blank.

Field 14: Driver Actions (Officer Opinion Only)

Change(s):

- Added several codes for actions that could contribute to a crash
- A second driver action can be recorded

Rationale:

- Allow the officer to specify any of the missing common actions (rather than having to go to the narrative). Allow the officer to cover the situation where more than one action applies.

		DRIVER ACTIONS (OFFICER OPINION ONLY)		
<input type="text"/>	<input type="text"/>			
1st	2nd			
00. No Contributing Action	07. Improper Turn	17. Careless Driving (if used, next field can not be coded "00")		
02. Impeded Traffic	08. Turned from Wrong Lane or Position	18. Speeding		
03. Failed to Yield ROW	10. Lane Violation	19. Too Fast for Conditions		
04. Disregard Stop Sign	11. Improper Passing on Left	20. Racing		
05. Failed to Stop at Signal	12. Improper Passing on Right	21. Over-Correcting/Over-Steering		
06. Disregarded Other Device/ Sign/Markings	13. Followed Too Closely	22. Lacking Required Chains		
	14. Improper Backing	23. Other Contributing Action (Describe in Narrative)		
	15. Signaling Violation			
	16. Reckless Driving			

Enter the code that best describes the driver action that led to the crash, in the officer's opinion. Whereas, the next field describes a driver condition, this field defines a specific action, or law violation, that led to the crash occurring.

Guidance

- Up to two driver actions can be entered.
- The more significant action (that had the most impact leading to the crash occurring) should be entered first. The first field must be given a value.

Business Rules

- If the first field is coded as **00. No Contributing Action**, then the second one should be left empty.
- If **17. Careless Driving** is entered in the first field, then **00. No apparent contributing factor** cannot be entered as the Most Apparent Human Contributing Factor below.

Field 15: Driver-Most Apparent Human Contributing Factors (Officer Opinion Only)

Change(s):

- Added several codes, especially related to distraction.

- Up to three selections are available.

Rationale:

- Allow the officer to specify any of the missing common actions (rather than having to go to the narrative). Allow the officer to cover the situation where more than one action applies.

DRIVER - MOST APPARENT HUMAN CONTRIBUTING FACTORS (OFFICER OPINION ONLY)		
1st	2nd	3rd
00. No Apparent Contributing Factor	09. Physical Disability	23. Distracted/Manipulating Vehicle Control
02. Asleep or Fatigued	11. Distracted/Other Occupant	24. Distracted/Other Interior
03. Medical	16. Age/Driver Ability	25. Distracted/Other Exterior
04. Driver Inexperience	17. Looked/Did Not See	26. Sun Glare
05. Aggressive Driving	18. Talking on Phone/Holding	27. Not Observed
06. Driver Unfamiliar With Area	19. Talking on Phone/Hands Free	15. Other Factor (Describe in Narrative)
07. Driver Emotionally Upset	20. Manipulating Electronic Device	28. Illness
08. Evading Law Enforcement Officer	21. Distracted Eating/Drinking	
	22. Distracted/Smoking	

Enter the codes which best describes the human factor, if any, that **contributed** to the crash. These fields indicate which specific driver **conditions** the officer feels contributed to the crash, not specific driving actions.

Guidance

- Up to three contributing factors can be entered.
- The most significant factor (that had the most impact leading to the crash occurring) should be entered first. The first field must be given a value.
- These fields are intended to record the officer's opinion only and may or may not be supported by other evidence.
- Select the codes which best describe the condition of the non-motorist prior to impact that you feel did (or could have) contributed to the crash.
- Medical/Illness has been split, with the following definitions:
 - **03. Medical:** An ongoing, chronic diagnosed condition, such as heart disease, diabetes, epilepsy, cancer, or other medical condition requiring significant ongoing medical care by a doctor, and approval of a physician to maintain driving privileges.
 - **28. Illness:** A condition such as cold, flu, allergies, or other minor medical conditions not requiring the on-going medical management of the condition.
 - **NOTE:** A **Medical** entry will serve as a trigger to the Department of Revenue to require a follow-up medical review and certification to reapprove the driving privileges of an involved party suffering from a medical condition.

Examples of behavior corresponding to the various new codes:

- **16. Age/Ability** – This would be selected where a driver’s reaction time or physical condition may have contributed to the crash or to not being able to avoid the crash.
- **17. Looked/Did Not See** – The driver stated that he/she was looking but did not see something leading up to the crash.
- **18. Talking on Phone/Holding** – The driver was holding a phone and in a conversation on the phone leading up to the crash.
- **19. Talking on Phone/Hands Free** – The driver was in a conversation on a phone that was in hand’s free mode (i.e. the audio was connected to either an earpiece/headphone or the vehicle) leading up to the crash.
- **20. Manipulating Electronic Device** – The driver was interacting with an electronic device (not associated with the vehicle), such as a phone, laptop, game console, GPS navigation system, etc.
- **21. Distracted Eating/Drinking** – The driver was distracted by the act of eating, drinking, reaching for food or drink, or having dropped food or spilled a drink.
- **22. Distracted/Smoking** – The driver was distracted by the act of smoking, trying to light a cigarette or cigar, or etc., was activating an electronic cigarette, or was reaching for a cigarette, cigar, etc. Dropping a lit cigarette in the vehicle would also be covered by Distracted/Smoking.
- **23. Distracted/Manipulating vehicle control** – The driver was interacting with a vehicle control (gearshift, stereo, integrated GPS, system settings, windshield wipers, autopilot, etc.)
- **24. Distracted/Other Interior** – The driver was distracted by some other source of distraction located such as insects, non-food objects on the floor, within the vehicle not including distraction by a passenger.
- **25. Distracted/Other Exterior** – The driver was distracted by some other source of distraction located outside the vehicle (e.g. another crash, reading a billboard, road construction, etc.).
- **26. Sun Glare** – The driver was distracted by glare, or the driver’s vision was impeded by glare.

The following codes have been removed:

- **01. Asleep at the Wheel** – This has been addressed with the modified code 02.
- **10. DUI, DWAI, DUID** – Those cases will now be noted in the fields for suspected alcohol, suspected marijuana, or suspected drugs (to better clarify the type of impairment observed).
- **12. Distracted/Cell Phone** – This has been expanded in the new codes 17 and 18
- **13. Distracted/Radio** – This has been replaced by the new code 23 described above.
- **14. Distracted/Other** – The old selection has been expanded into several new ones (20. 24). If the driver was distracted by something not in the list, select code **15. Other Factor**, and describe the distraction in the narrative.

Business Rules

- If the first or second field is coded as **00. No Apparent Contributing Factor**, then the remaining fields should be left empty.

Autonomous Vehicles

Field 16: Autonomous Vehicle Capability

Change(s):

- New

Rationale:

- Autonomous vehicles are arriving within the next few years, and the form need to be ready for their arrival.
- To allow the officer to enter the relevant information as a field (rather than in the narrative)

AUTONOMOUS VEHICLE CAPABILITY	
00. No Automation	03. Conditional Automation
01. Driver Assistance	04. High Automation
02. Partial Automation	05. Full Automation
	06. Unknown

Enter the code that best describes the level of autonomy that the vehicle has:

- **00. No Automation:** The full-time performance by the human driver of all aspects of the dynamic driving task, even when enhanced by warning or intervention systems.
- **01. Driver Assistance:** The driving mode-specific execution by a driver assistance system of either steering or acceleration/deceleration using information about the driving environment and with the expectation that the human driver performs all remaining aspects of the dynamic driving task
- **02. Partial Automation:** The driving mode-specific execution by one or more driver assistance systems of both steering and acceleration/deceleration using information about the driving environment and with the expectation that the human driver performs all remaining aspects of the dynamic driving task
- **03. Conditional Automation:** The driving mode-specific performance by an Automated Driving System of all aspects of the dynamic driving task with the expectation that the human driver will respond appropriately to a request to intervene
- **04. High Automation:** The driving mode-specific performance by an Automated Driving System of all aspects of the dynamic driving task, even if a human driver does not respond appropriately to a request to intervene

- 05. Full Automation: The full-time performance by an Automated Driving System of all aspects of the dynamic driving task under all roadway and environmental conditions that can be managed by a human driver.

NOTE: The definitions above come from a press release regarding US DOT adopting SAE International's levels of automation. (<https://www.sae.org/news/3544/>) Refer to the table below for determining the level of automation.

SAE level	Name	Narrative Definition	Execution of Steering and Acceleration/Deceleration	Monitoring of Driving Environment	Fallback Performance of Dynamic Driving Task	System Capability (Driving Modes)
Human driver monitors the driving environment						
0	No Automation	the full-time performance by the <i>human driver</i> of all aspects of the <i>dynamic driving task</i> , even when enhanced by warning or intervention systems	Human driver	Human driver	Human driver	n/a
1	Driver Assistance	the <i>driving mode</i> -specific execution by a driver assistance system of either steering or acceleration/deceleration using information about the driving environment and with the expectation that the <i>human driver</i> perform all remaining aspects of the <i>dynamic driving task</i>	Human driver and system	Human driver	Human driver	Some driving modes
2	Partial Automation	the <i>driving mode</i> -specific execution by one or more driver assistance systems of both steering and acceleration/deceleration using information about the driving environment and with the expectation that the <i>human driver</i> perform all remaining aspects of the <i>dynamic driving task</i>	System	Human driver	Human driver	Some driving modes
Automated driving system ("system") monitors the driving environment						
3	Conditional Automation	the <i>driving mode</i> -specific performance by an <i>automated driving system</i> of all aspects of the <i>dynamic driving task</i> with the expectation that the <i>human driver</i> will respond appropriately to a <i>request to intervene</i>	System	System	Human driver	Some driving modes
4	High Automation	the <i>driving mode</i> -specific performance by an <i>automated driving system</i> of all aspects of the <i>dynamic driving task</i> , even if a <i>human driver</i> does not respond appropriately to a <i>request to intervene</i>	System	System	System	Some driving modes
5	Full Automation	the full-time performance by an <i>automated driving system</i> of all aspects of the <i>dynamic driving task</i> under all roadway and environmental conditions that can be managed by a <i>human driver</i>	System	System	System	All driving modes

Enter **06. Unknown** if you cannot ascertain the level of autonomy of the vehicle.

Field 17: Driver Ceded Control of Vehicle Check Box

Driver Ceded Control of Vehicle

Mark this box (enter an "X" or ✓) if the driver ceded control of the vehicle, in other words, let an autonomous vehicle drive itself.

Business Rules

- If 00, 01, or 02 is entered for **Field 16: Autonomous Vehicle**, then Driver Ceded Control of Vehicle Check Box must not be checked.

- Conversely, if Driver Ceded Control of Vehicle Check Box is checked, then 04, or 05 must be entered in Field 16: Autonomous Vehicle.

Commercial Motor Vehicle Data Fields

This section of the form addresses vehicle information associated with a Commercial Motor Vehicle (CMV). The whole CMV portion of the form must be filled when any self-propelled or towed vehicle meets any of these requirements:

- Is an interstate carrier,
- Is an intrastate carrier,
- Is hauling a placarded hazardous material load,
- Is in commerce and equipped to transport other motor vehicles by means of winches, cables, pulleys, or other equipment for towing, pulling, or lifting,
- *Is used to transport 9 or more people for compensation,*
- *Is designed to transport 16 or more people regardless of compensation,*
- *Is transporting an amount of hazardous material that requires a hazmat placard, or*
- *Is designed or equipped to transport other vehicles via cables or winches.*

Exceptions:

The following vehicles do not require the section to be completed:

- Off-road construction equipment such as a motor scraper, backhoe, motor grader, compactor, tractor, trencher, bulldozer or a railroad track maintenance crane.

Business Rules

- If the vehicle exceeds the GVWR/GCWR threshold of 10,001 or greater, but is not in commerce (e.g. a private owner hauling a 5th wheel camper), then only the following fields need to be completed:
 - Carrier Type
 - GVWR/GCWR
 - Number of Axles
 - Vehicle Configuration
 - Cargo Body Type
 - Sequence of Events

For example:

- Joe Johnson is driving a one-ton pickup truck with a GVWR of 11,000 pounds and is hauling a load of gravel for landscaping his backyard. Since this vehicle is not in commerce, only those underlined fields are required.

Definitions:

- GVWR (Gross vehicle weight rating) is the value specified by the manufacturer as the loaded weight of a single vehicle. Usually found on the VIN label. (Reference: 49 CFR 3905)
- GCWR (Gross combination weight rating) is the value specified by the manufacturer as the loaded weight of a combination (articulated) motor vehicle. In the absence of a value specified by the manufacturer, GCWR will be determined by adding the GVWR of the power unit and the total weight of the towed unit and any load thereon, or the GVWR of the power unit to the GVWR of the trailer. (Reference: 49 CFR 390.5)

Locate the GVWR or GCWR on the door pillar of the driver's side of the vehicle or by looking at the hinge pillar, door-latch post, or door edge for the manufacture label.

Motor Coaches and Buses

The CMV Data Section must be filled out for motor coaches or buses designed or used to transport nine or more people, including the driver, **and** is used in the furtherance of a commercial enterprise. A **commercial enterprise** is a venture or undertaking involving financial commitment and connected to business and commerce in general. Included in this definition are churches, food banks, charities and other non-profit organizations. This includes all school buses. That includes all these examples:

- A vehicle designed or used to transport nine or more passengers (including the driver) and is used by a church to transport its members to a picnic.
- A shuttle bus that transports nine or more passengers (including the driver) from a hotel to the airport.
- A limousine that transports nine or more passengers (including the driver) and is for hire.
- A vehicle designed or used to transport nine or more passengers (including the driver) used by a day care service.

Practical Examples

- Any vehicle in commerce and equipped to transport other motor vehicles by means of winches, cables, pulleys, or other equipment for towing, pulling, or lifting. **The CMV Data Section must be filled out.**
- Speedy courier is driving a vehicle with a GVWR of 4,000. The vehicle has placards due to a small amount of hazardous material on board. **The CMV Data Section must be filled out.** The GVWR is not taken into consideration when a vehicle is hauling hazardous material.
- Al's Mowing Service is using a truck in conjunction with his business. It has a GVWR of 6,000 pounds and is towing a trailer with a GVWR of 4,500 pounds (GCWR = 10,500). **The CMV Data Section must be filled out** because the GCWR is over 10,001 pounds. **However**, because the vehicle is

10,001 pounds or more, but not 16,001 pounds or more, only those fields underlined in the CMV VEHICLE DATA section are required.

- John is driving a ¾ ton truck with a GVWR of 8,800 pounds and towing a trailer with a GVWR of 7,000 pounds (GCWR = 15,800 pounds) loaded with hay. **The CMV Data Section must be filled out.** **However**, because the vehicle is 10,001 pounds or more, but not 16,001 pounds or more, only those fields underlined in the CMV VEHICLE DATA section are required.
- Al's Mowing Service is using a truck in conjunction with his business. It has a GVWR of 6,000 and is towing a small trailer with a GVWR of 4,000 (GCVW = 10,000). **The CMV Data Section is not required.** Although it is being used for business purposes, the GCWR is less than 10,001 pounds and **is not** considered a commercial vehicle.
- Farmer John is driving a ¾ ton truck with a GVWR of 8,800 hauling bags of grain from the market. **The CMV Data Section is not be required**, even if interstate transport, since the GVWR is less than 10,001, and the vehicle is not considered in commerce.
- A pickup (such as Ram 3500) with a GVWR less than 10,001 used in commerce. **The CMV Data Section is not required** since the vehicle is less than 10,001 GVWR.

Filling Out the CMV Fields

Field 18: Carrier's Name

Carrier Name

Enter the name of the CMV carrier.

Refer to **Appendix J** for help with locating the responsible carrier. When obtaining the carrier name, use the following hierarchy:

- Log Book
- Shipping Papers, Truck, Bus, or Trip Manifest
- Driver
- Side of Vehicle

The order in which the ramps are listed is the hierarchy. In other words, a name from the driver's log book has priority over all other sources.

If the truck is a rental or lease (such as Penske or Ryder), examine the rental contract. The carrier's name should be on it. Use the carrier's name, not the rental company's name.

Example: Doyle’s Extra Large Gadgets is a leased box truck from Penske. Even though “Penske” is on the side of the door, do not use that as the carrier name. Instead, examine the rental contract or the driver’s paperwork to find the name of the company renting the vehicle.

Field 19: (Carrier) Address

Enter the full address of the CMV carrier, including the address, city, state, and zip code. Do not enter a PO Box number.

Field 20: DOT

Enter the carrier's DOT number in this field. Types of numbers are listed below. Refer to Appendix J for assistance in identifying proper carrier numbers.

US DOT numbers can have up to eight digits. These are primarily interstate carriers.

Example: A straight truck is involved in a traffic crash. The investigating officer notes that the US DOT number is 45789978.

This DOT number indicates an interstate carrier because there is no state code

In the case of a leased or rented truck, be sure to use the identification number of the carrier leasing the truck, not the number of the parent company renting out the vehicle.

If there is more than one number present, you must determine which one is applicable.

Verify that the DOT number belongs to the entity or corporation responsible for transporting the goods or persons.

Over-Sized Vehicle Check Boxes

Change(s):

- New checkboxes for various over size parameters.

Rationale:

- To indicate which dimension may have contributed to the crash.
- To address federal CMV needs.

Field 21: Over Height Check Box

Over Height <input type="checkbox"/>

Mark this box (enter an "X" or ✓) the vehicle is over height.

Field 22: Over Weight Check Box

Over Weight <input type="checkbox"/>

Mark this box (enter an "X" or ✓) if the vehicle is overweight.

Field 23: Over Length Check Box

Over Length <input type="checkbox"/>

Mark this box (enter an "X" or ✓) if the vehicle is over length.

Field 24: Over Width Check Box

Over Width <input type="checkbox"/>
--

Mark this box (enter an "X" or ✓) if the vehicle is over width.

Field 25: Permitted Check Box

Permitted <input type="checkbox"/>

Mark this box (enter an "X") if the vehicle is permitted for all over-size aspects corresponding with the above overage boxes that were marked (over height, overweight, over length and/or over width).

Guidance

Refer to permitting documentation provided by the driver.

Field 26: Carrier Type

CARRIER TYPE	<input type="checkbox"/>	01. Interstate	04. Not in Commerce
		02. Intrastate	(If #04 is chosen,
		03. Government Vehicle	complete only the underlined fields below.)

Indicate whether the carrier is an interstate carrier, intrastate carrier, a government vehicle (over 10,000 pounds GVWR), or not in commerce.

Guidance

- **01. interstate carrier** applies to any commercial vehicle that hauls between states, between two points in a single state by going through another state, or between two places in a state with cargo that originated outside the state. A load's origin is found on the shipping papers.
- **02. intrastate** applies to any commercial motor vehicle which does not meet the requirements of an interstate carrier would be classified as an intrastate carrier.

Field 27: Gross Vehicle Weight Rating/Gross Combined Weight Rating

Change(s):

- Changed from code to weight (in pounds).

Rationale:

- To better reflect what would be obtained by the officer from the vehicle documentation.

GROSS VEHICLE WEIGHT RATING/GROSS COMBINATION WEIGHT RATING	<input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/> <input type="text"/>
	Enter number of pounds.

Enter the actual weight rating for the vehicle, which will be either the Gross Vehicle Weight Rating or the Gross Combined Weight Rating:

- **Gross Vehicle Weight Rating (GVWR)** A GVWR is a value specified by the manufacturer for a single-unit truck, truck tractor, or trailer. In the absence of a GVWR, an estimate of the gross weight of a fully loaded unit may be substituted.
- **Gross Combined Weight Rating (GCWR)** A GCWR is the sum of the GVWRs for the units which make up a truck combination.

For the power unit, the GVWR can be found on the driver's side door, or by looking at the hinge pillar, door-latch post, or door edge for the manufacture label.

The GVWR for the trailer can be found on the manufacturer's tag affixed to the trailer.

If there is more than one trailer, use the Gross Combed Weight Rating (GCWR) of all the trailers and the power unit in this field.

Field 28: The Number of Axles

TOTAL NUMBER OF AXLES Enter the total number of axles including truck and trailer.	<input type="text"/> <input type="text"/>
---	---

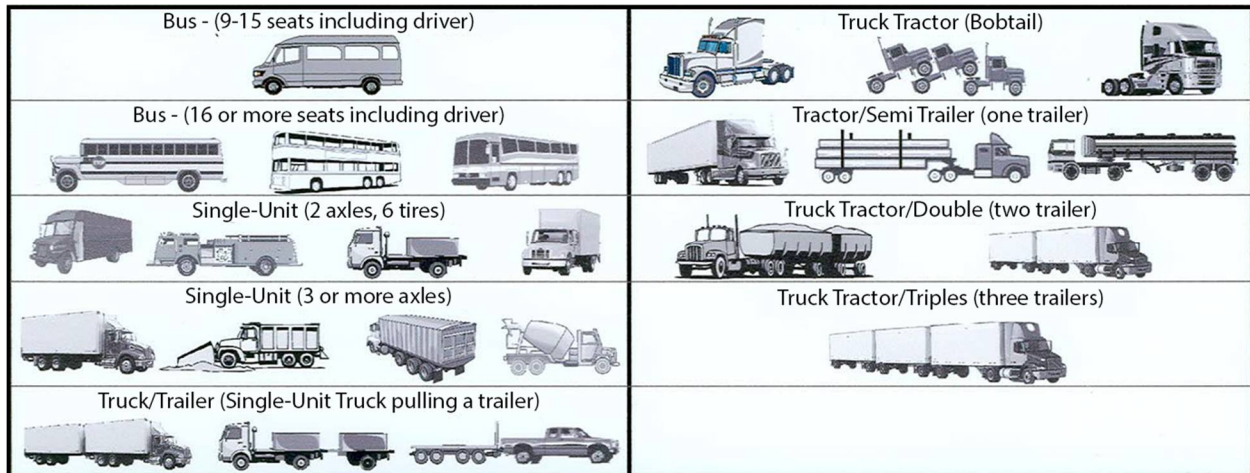

Enter the total number of available axles including the truck, trailer and tag axles, whether they are up or down.

Field 29: Vehicle Configuration

		VEHICLE CONFIGURATION	<input type="text"/>
01. Passenger Car (only if HM placarded)			
02. Light Truck (only if HM placarded)	08. Truck Tractor and Semi-Trailer		
03. Bus/Limousine	09. Truck Tractor and Double Trailers		
04. Single-unit Truck (2 axles)	10. Truck Tractor and Triple Trailers		
05. Single-unit Truck (3 or more axles)	11. Other (Describe in Narrative)		
06. Truck and Trailer			
07. Truck Tractor (Bobtail)			

Enter the appropriate code for the vehicle or vehicle combinations that describe the truck involved in the crash.

Figure 19: Vehicle Configuration

Field 30: Cargo Body Type

		CARGO BODY TYPE	<input type="text"/>
01. Bus/ Limousine (seats 9-15 occupants, including the driver)			
02. Bus/Limousine (seats 16 or more occupants, including the driver)	10. Grain, Chips, Gravel		
03. Van/Enclosed Box	11. Pole		
04. Cargo Tank	12. Intermodal Container		
05. Flatbed/Pickup	13. Vehicle Towing another Vehicle		
06. Dump Bed	14. Fire Apparatus		
07. Concrete Mixer	15. Ambulance		
08. Auto Transporter	16. No Cargo Body		
09. Garbage Refuse	17. Other (Describe in Narrative)		

Enter the code for the cargo body type that best describes the vehicle involved in the crash.

Special cases:

- In the case of a school bus, always enter either 01 or 02.

- For a pickup that by itself weighs over 10,000 pounds, (such as a Ford F450), enter 05.
- For a pickup pulling a 5th wheel trailer (such as a camper), enter 03.

Figure 20: Cargo Body Configuration

Field 31: Sequence of Crash Events

SEQUENCE OF CRASH EVENTS				
	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
	1st	2nd	3rd	4th

Enter up to four codes that describe the sequence of the first four events for the Commercial Motor Vehicle.

Guidance

- If more than four events apply, enter the four most important ones.
- If there are less than four, then leave the remaining fields blank.

There are several categories of crash events:

- NON-COLLISION CRASH – if a traffic unit (vehicle or non-motorist) does not collide with another traffic unit or with any object,
- COLLISION WITH NON-MOTORIST – if a traffic unit collides with a Non-Motorist,
- COLLISION WITH MOTOR VEHICLE IN TRANSPORT – if two vehicles collide, to note the type of collision,
- COLLISION WITH ANIMAL – if the traffic unit collided with an animal (on or off the roadway), or
- COLLISION WITH OBJECT – if the traffic unit collided with an object (on or off the roadway).

EXAMPLE:

A truck/semi-trailer loses control on an icy roadway. The vehicle runs off the left side of the road and crosses the center median. When the vehicle enters into the opposite lanes it jackknifes and collides head on with an SUV. The vehicle comes to rest in the opposite lanes of traffic.

First field	01	Ran off the road
Second field	08	Cross the median/center line
Third field	02	Jackknifed
Fourth field	12	Collision motor vehicle in transport

If there are less than four events, leave the remaining fields blank.

Field 32: Hazardous Materials – Placards

HAZARDOUS MATERIALS - PLACARDS Did the vehicle have a hazardous material placard? 00. No 01. Yes 02. Required but Missing	<input type="text"/>
--	----------------------

Enter the appropriate code to indicate whether the vehicle has hazardous material placards. Refer to **Appendix J**.

Guidance

- Normally, if you enter 00. No, then the next four Hazmat fields should be left blank.
- However, If you enter 00. No (because the vehicle is not placarded) but determine from other sources, (i.e., shipping papers) that the vehicle was transporting hazardous materials and **should have been placarded**, continue to complete the Hazmat fields as applicable.

Field 33: Hazardous Materials – Release

HAZARDOUS MATERIALS - RELEASE Was hazardous cargo from the placarded truck released? (Do not count fuel from the vehicle fuel tank) 00. No 01. Yes	<input type="text"/>
---	----------------------

Indicate whether or not any hazardous materials were released from the cargo tank or compartment.

For the purposes of this field, fuel released from the fuel tank does not count as a hazardous material release, even if the spill was over 25 gallons.

Field 34: Hazardous Materials – Code

HAZARDOUS MATERIALS - CODE Enter the four digit number from the placard. If no number on the placard enter the four digit Identification number from the shipping paper(s).		<input type="text"/>
---	---	----------------------

Enter the four-digit number from the placard. If there is no number on the placard, enter the four digit identification number from the shipping paper(s). If the vehicle is transporting hazardous material that does not require a placard, leave this field blank. Refer to **Appendix J**. Enter the number sequence as shown in the sample below.

When transporting hazardous materials, in reportable quantities, the vehicle is required to display the four-digit hazardous materials number on either placards or orange panels. When multiple placards are displayed on the vehicle, only information from one of the placards needs to be written down.

Field 35: Hazardous Materials – Class

HAZARDOUS MATERIALS - CLASS Enter the one digit number taken from the bottom of the placard.		<input type="text"/>
--	---	----------------------

Enter the one-digit number taken from the bottom of the placard.

In most cases, vehicles carrying hazardous materials are required by law to conspicuously display a placard indicating the class, type, or the specific name of the hazardous material cargo. When multiple placards are displayed on the vehicle, write down the information from only one of the placards.

Field 36: Liquid Hazardous Materials

LIQUID HAZARDOUS MATERIALS Enter the amount of bulk liquid cargo at time of crash.	<input type="text"/>
01. 0 to 1,000 gallons	06. 5,001 to 6,000 gallons
02. 1,001 to 2,000 gallons	07. 6,001 to 7,000 gallons
03. 2,001 to 3,000 gallons	08. 7,001 to 8,000 gallons
04. 3,001 to 4,000 gallons	09. 8,001 gallons and over
05. 4,001 to 5,000 gallons	

Enter the amount of bulk liquid cargo at the time of the crash.

If one or more of the units is a cargo tank, indicate in gallons the amount of bulk liquid cargo in the tank at the time of the crash. The officer can use the shipping papers and the amount of liquid cargo off-loaded, if any, to determine the amount of liquid cargo at the time of the traffic crash.

Note: If you are unable to obtain the amount of liquid cargo at the time of the traffic crash you should estimate the amount to the best of your ability.

TRAFFIC UNIT/NON-MOTORIST (Page E)

This section covers the information for the Non-Motorist page of the crash report.

This page must be completed for each non-motorist involved in the crash, even as a non-contact motorist.

Guidance

A “non-motorist” is defined as a traffic unit involving a person which has no (substantial means of) motorized propulsion.

Any of the following would qualify as a non-motorist:

- Pedestrian, walking or running on foot;
- Other Pedestrian (person in a wheelchair, person in a building, skater, personal conveyance, rider of a toy vehicle, rider of a scooter with an engine 49cc or smaller, etc.);
- Bicyclist, riding a non-motorized bicycle;
- Other Bicyclist⁷: Non-motorist using a non-motorized, pedal-powered vehicle other than a bicycle, such as a unicycle or adult tricycle;
- Occupant of Motor Vehicle Not in Transport (parked, etc.) (Note: if/when the person exits the vehicle, they’re a pedestrian.)
- Occupant of a Non-Motor Vehicle Transportation Device (such as a passenger in a pedal-cab, etc.);
or
- Other examples, such as a person riding an electric motorized bike with less than 750 watts of power.

See **Field 21: Non-Motorist Type** on page 157 for type various types of non-motorists that need to be included.

⁷ Note: While this would more appropriately be termed “Other Cyclist” (as it is in MMUCC), it was felt that officers would be more comfortable with the term “Other Bicyclist” and so that was retained.

Figure 21: Page E – With Reference Numbers

Header Fields

Electronic Reporting

In general, these header fields should be filled out automatically by the electronic reporting application when the crash report is entered electronically.

Field 1: Page ___ of ___ Pages

PAGE ___ OF ___ PAGES

Enter the page number for this page (according to its location in the crash report package) in the first blank.

Enter the same number of total number of pages as on the first page of the crash report in the second blank.

For information on the order of pages in the crash report package, see ***The DR3447 Crash Report Package*** on page 17 of this manual.

Field 2: Case Number

Case #

Enter the same case number as on the first page of the crash report package (**Field 2: Case Number**).

Field 3: (Law Enforcement) Agency ORI

Agency ORI

Enter the same agency ORI of the reporting agency as on the first page of the crash report package (Field 3: (Law Enforcement) Agency ORI)

Field 4: (Law Enforcement) Agency Name

Agency Name

Enter the same name of the reporting agency as on the first page of the crash report package (Field 4: (Law Enforcement) Agency Name).

Non-Motorist Fields

Field 5: Traffic Unit

Traffic Unit #	<input type="text"/>	<input type="text"/>
-------------------	----------------------	----------------------

Enter the Traffic Unit # for this Non-Motorist.

The vehicle or non-motorist that was most at fault for the crash should be assigned the Traffic Unit # 1 being the most at fault for the crash. The other vehicles and/or non-motorists should be assigned subsequent consecutive numbers (2, 3, etc.)

See Section **Traffic Unit Number** on page 20 of this manual for the explanation of the Traffic Unit #.

Field 6: (Non-Motorist's) Name

Last Name	First Name	MI
-----------	------------	----

Enter the non-motorist's last name, first name, and middle initial.

Follow the structure as defined in the section on Entering A Person's Name, on page 12.

If the non-motorist has more than one middle name, use both initials. Apostrophe's are not accepted in this field. Hyphens and one space for each name (last, first) **ARE** accepted.

The investigating officer should confirm name, address, and age of involved parties by asking them. Do not rely solely on the information given on a driver's license.

Field 7: (Non-Motorist's) Street Address

Street Address		
City	State	ZIP

Enter the non-motorist's current street, route or P.O. Box address. The investigating officer should confirm the address of involved parties by asking them. Do not rely solely on the information given on a driver's license.

Enter the city, state, and zip code. The standard two-letter abbreviations for states are listed in **Appendix B** and should be used when completing these fields. If a foreign country has a state or province listed in **Appendix C**, use the state or province rather than the country.

Field 8: (Non-Motorist's) Phone Number

Enter the contact phone number including the area code. If the phone number is unknown, do not enter "NONE". Instead, leave the field blank.

Field 9: (Non-Motorist's) Email

Enter the email address. If the email address number is unknown, do not enter "NONE". Instead, leave the field blank. If the non-motorist has no email address, enter "NONE".

Field 10: Hit & Run/Left Scene Check box

 Hit & Run
/Left Scene

Mark this box (enter an "X" or ✓) if the non-motorist did not remain at the scene of a crash as required by statute.

Guidance

If the original report was submitted, and the non-motorist that left the scene is subsequently identified, a follow-up report must be submitted. This should be done even if the original report was submitted as being complete. Information about the non-motorist can be included in the fields on this page.

Field 11: Non-Contact Non-Motorist Check box

 Non-Contact
Non-Motorist

Mark this box (enter an "X" or ✓) if this non-motorist contributed to the crash occurring, but was not involved in a collision, nor was injured.

Field 12: (Non-Motorist's) Driver License Number

Enter the non-motorist's license number or state identification number. Use the original license number rather than a reissue number or a probationary number.

Note: This is for identification only.

If the driver has a valid driver's license and it is not in his possession, obtain a driving record and enter the driver's license number in this field.

If there is no record of a driver's license, enter the word "NONE" in this field.

Field 13: (License) State (or Country)

Enter the standard two-letter abbreviation of the state which issued the driver's license entered above. See **Appendix B** for a list of state codes.

If the license is issued by an authority outside the United States, enter the two-letter abbreviation for the country (or state/province) of issuance taken from **Appendix C**. If no license is shown, leave this field blank.

Field 14: Sex

Enter the letter "**M**" for a male or the letter "**F**" for a female, or "**X**" for non-binary.

NOTE: Follow the gender as identified on the driver's license. (A transgender person can have that changed through a legal process.) As of November 30, 2018, the Colorado Division of Motor Vehicles (DMV) offers a third sex identifier, X (non-binary), on Colorado driver licenses, instruction permits and identification cards.

Field 15: DOB (Date of Birth)

Enter the numeric month, day, and four-digit year of the operator's or pedestrian's birth.

Example: 05/15/1969

Business Rules

- If the non-motorist is a juvenile (under the age of 18) then **Field 25: Juvenile(s) Involved Check Box Juvenile(s) Involved Check Box** on **MAIN CRASH REPORT PAGE (Page A)** must be checked.

Field 16: Primary Violation

Enter the primary crash-related charge in this field (such as Failed to Yield Right of Way), not the DUI-related charges.

A primary crash-related charge is defined as a violation of the laws relating to pedestrian or bicyclist movement and contributing to a crash.

Guidance

- Common non-motorist primary crash-related charges include jay-walking, riding a bicycle in the wrong direction, being intoxicated, etc.
- Generally, deceased driver charges should not be listed on the DR3447; however, if the officer's agency requires a listing of charges or a for record only citation, the officer should follow agency policy in this regard.

NOTE: It is recommended that the other charges be listed in the narrative as this may be the only documentation the agency has to reference 5 to 10 years later for civil testimony.

Validation Rule

If this field is filled in, the next three fields must also be completed.

Field 17: DUI Check Box

Mark this box (enter an "X" or ✓) if the non-motorist was impaired or under the influence of alcohol, marijuana, or other drugs and received an applicable citation.

Field 18: Violation Code

Enter the appropriate state statute or municipal ordinance number for the primary violation. If only an alcohol or drug related charge is applicable, enter that number here.

Guidance

Enter the most appropriate (most specific) infraction. Only use "Careless" if no other violation applies

Field 19: Citation Number

Enter a citation number, if any, which corresponds with the violation charged. If the charge was filed directly with the District Attorney, enter "**DIRECT FILE**". If charges are pending, enter the word "**PENDING**".

Field 20: Common Code

Enter the appropriate common code for the primary violation entered above.

Field 21: Non-Motorist Type

Change(s):

- New (separated from "Traffic Unit Type").
- List only types applicable to a non-motorist.

Rationale:

- Make it easy for the officer to identify which type of non-motorist was involved
- To enable better safety studies addressing non-motorist crashes

NON-MOTORIST TYPE	
01. Pedestrian	05. Other Pedestrian
02. Wheelchair	06. Bicyclist
03. Scooter	07. Other Bicyclist/Cyclist
04. Personal Conveyance	08. Other Non-Motorist

Enter the code that best corresponds to the type of non-motorist.

Guidance

The following codes are available for this field:

- 01. Pedestrian, for a person walking or running (not riding any apparatus).

- 02. Wheelchair, for a person in a wheelchair.
- 03. Scooter, for a person riding a scooter (less than 49 cc)
- 04. Personal Conveyance, for a non-motorist on a skateboard, motorized toy cars, etc.
- 05. Other Pedestrian, for any other pedestrian (describe in the narrative)
- 06. Bicyclist, for a non-motorist riding a bicycle (generally, with two wheels), including a tandem bicycle.
- 07. Other Bicyclist/Cyclist, for a non-motorist riding a something besides bicycle (e.g. other than two wheels, motorized bicycle, pedicab, etc.).
- 08. Other Non-Motorist, for any other non-motorist, such as:
 - A person on skates, riding a skateboard, long-board, or electric skateboard
 - An occupant of Motor Vehicle Not in Transport (parked, etc.)
 - An occupant of a Non-Motor Vehicle Transportation Device such as a toy vehicle or scooter that does not have an engine size 49cc or greater. etc.
 - NOTE: If this code is used, a brief description should be added to the narrative.
- If the electric bicycle with more than 750 watts of power, it should be considered a motorized vehicle (and thus the relevant crash information should be captured on the Traffic Unit/Vehicle page).

Field 22: Non-Motorist Movement – Prior To Impact

<div style="display: inline-block; border: 1px solid black; width: 30px; height: 30px; margin-right: 10px;"></div> NON-MOTORIST MOVEMENT - PRIOR TO IMPACT	
01. Going Straight	10. Parked
02. Slowing	11. Changing Lanes
03. Stopped in Traffic	12. Swerve/Avoidance
04. Making Right Turn	13. Weaving
05. Making Left Turn	14. Out of Control
06. Making U-Turn	15. Traveled Wrong Way
07. Passing	17. Entering Traffic Way/Merge
08. Backing	18. Negotiating a Curve
09. Entering/Leaving Parked Position	16. Other (Describe in Narrative)

Enter the code which best describes the movement of the non-motorist prior to impact.

Guidance

- Note that these are the same attributes as for the driver/vehicle (see the description of **Field 10: Vehicle Movement - Prior To Impact** on page 133).

Field 23: Non-Motorist Location at Time of Crash

Change(s):

- New

Rationale:

- Make it easy for the officer to identify what kind of facility the non-motorist was in when the crash occurred.
- To enable better safety studies addressing non-motorist crashes, and to determine what counter-measures would be useful.

NON-MOTORIST LOCATION AT TIME OF CRASH	
01. Intersection – Marked Crosswalk	09. Shoulder/Roadside
02. Intersection – Unmarked Crosswalk	10. Sidewalk
03. Intersection – Other	11. Median/Crossing Island
04. Midblock – Marked Crosswalk	12. Driveway Access
05. Midblock – Non-Crosswalk	13. Shared-Use Path or Trail
06. Travel Lane – Other Location	14. Non-Trafficway Area
07. Marked Bicycle Lane	15. Other Location (Describe in Narrative)
08. Protected Bicycle Lane	

Enter the code which best describes the location of the non-motorist at the time of the crash.

Field 24: Leg of Intersection

Change(s):

- New

Rationale:

- Make it easy for the officer to specify non-motorist's location within the intersection.
- To enable better safety studies addressing non-motorist crashes, and to determine where counter-measures would be useful.

NON-MOTORIST LEG OF INTERSECTION			
01.	North	05.	South
02.	Northeast	06.	Southwest
03.	East	07.	West
04.	Southeast	08.	Northwest

Enter the codes corresponding to the cardinal direction of the intersection leg in which the non-motorist was located at the time of the crash.

Note: This refers to the direction of the intersection leg from the center of the intersection, not the direction of travel associated with that leg.

Field 25: Type of Designated Bicycle/Pedestrian Facility/(Zone) Available for Non-Motorist at Time of Crash

Change(s):

- New

Rationale:

- Make it easy for the officer to identify what kind of facility the non-motorist was in when the crash occurred.
- To enable better safety studies addressing non-motorist crashes, and to determine what counter-measures would be useful.

TYPE OF DESIGNATED BICYCLE/PEDESTRIAN FACILITY (ZONE) AVAILABLE FOR NON-MOTORIST AT TIME OF CRASH	
01. Sidewalk	06. Unmarked Paved Shoulder
02. Crosswalk	07. Separate Bicycle Path/Trail
03. Marked Bicycle Lane	08. No Specific Facility
04. Shared Travelway	09. Other (Describe in Narrative)
05. Protected Bicycle Lane	

Enter the code which best describes the type of facility/zone that was present and available for use by the non-motorist. The non-motorist may not have made use of the facility

Guidance

- Crosswalks are considered available for a non-motorist as per CRS 42-4-803, "Between adjacent intersections at which traffic control signals are in operation, pedestrians shall not cross at any place except in a marked crosswalk."

- Protected Bicycle Lanes include physical separation from the motor vehicle roadway and the bicycle lane, such as raised curb, delineators, etc. Examples of a protected bike lanes include: a lane placed between parked cars and curb, or delineators separating from travel lanes, etc.
- There are often experimental or trial facilities that are not specifically identified in the list of codes. For example, some municipalities are trying out the use of “green bike boxes”. If such a facility is present, then enter code 08. Other, and describe the type of facility in the narrative.

Field 26: Non-Motorist Actions

Change(s):

- New (separated from Driver Action)

Rationale:

- Make easier for officer to select appropriate codes for a non-motorist

NON-MOTORIST ACTIONS (OFFICER OPINION ONLY)		<input type="text"/>	<input type="text"/>
		1st	2nd
00. No Contributing Action	13. Traveling on Sidewalk With Traffic		
01. Failure to Obey Traffic Signs, Signals, or Officer	14. Traveling on Sidewalk Against Traffic		
02. Cross/Enter at Intersection	15. Working in Trafficway (Incident Response)		
03. Cross/Enter NOT at Intersection	16. Working in Trafficway (Maintenance Activities)		
06. Soliciting Rides	17. Improper Passing		
07. Traveling Along Roadway With Traffic (In or Adjacent to Travel Lane)	18. Failure to Yield Right-Of-Way		
08. Traveling Along Roadway Against Traffic (In or Adjacent to Travel Lane)	19. Improper Turn/Merge		
09. Entering/Exiting Parked/Standing Vehicle	20. Dart/Dash		
10. Disabled Vehicle Related (Working on, Pushing, Leaving/Approaching)	21. In Roadway Improperly (Standing, Lying, Working, Playing)		
	22. Panhandling		
	12. Other (Describe in Narrative)		

Enter the codes that best describe the non-motorist action that contributed to the crash. Whereas the next field describes a non-motorist condition, these fields refer to specific actions, or law violations, that led to the crash occurring.

For example, if a non-motorist was walking on the sidewalk (in the same direction as the traffic), then started crossing the street (in the middle of the block), then

- The 1st Non-Motorist action would be **13. Traveling on Sidewalk With Traffic**, and
- The 2nd Non-motorist action would be **03. Cross/Enter NOT in crosswalk**.

Guidance

- Up to two non-motorist actions can be entered.
- The more significant action (that had the most impact leading to the crash occurring) should be entered first.

Business Rules

- The first field must be given a value.
- If the first field is coded as **00. No Contributing Action**, then the second fields should be left empty.

Field 27: Non-Motorist Most Apparent Contributing Factors (Officer Opinion Only)

Change(s):

- New

Rationale:

- Make it easy for the officer to identify which type of protection the non-motorist was using.
- To enable better safety studies addressing non-motorist crashes, and what kind of counter-measures (e.g. education campaigns) might be useful.

NON-MOTORIST MOST APPARENT CONTRIBUTING FACTORS (OFFICER OPINION ONLY)		<input type="text"/>	<input type="text"/>	<input type="text"/>
		1st	2nd	3rd
00. No Apparent Contributing Factor	11. Distracted/Headphones			
01. Not Visible (Dark Clothing, No Lighting, etc.)	12. Distracted/Cell Phone			
02. Emotionally Upset	13. Distracted – Manipulating Electronic Device			
03. Asleep or Fatigued	14. Distracted/Other i.e. Food, Objects, Pet, etc.			
04. Illness/Medical	15. Looked/Did Not See			
05. Inexperience	16. Age/Ability			
06. Aggressive	17. Sun Glare			
07. Unfamiliar With Area	18. Under The Influence of Alcohol or Drugs			
08. Evading Law Enforcement Officer	19. Other Factor (Describe in Narrative)			
09. Physical Disability				
10. Distracted/Passenger				

Enter the codes which best describes the human factor, if any, **contributing** to the crash.

For example, if the officer suspected the Non-Motorist to be inexperienced with riding a unicycle, and listening to an electronic device through headphones, and that both factors led to the non-motorist entering into the street where she was struck, the officer would select:

- **05. Inexperience**, and
- **11. Distracted/Headphones.**

Guidance

- Up to three contributing factors can be entered.
- The more significant factor (that had the most impact leading to the crash occurring) should be entered first.

- These fields are intended to record the officer’s opinion only and may or may not be supported by other evidence.
- Select the codes which best describe the condition of the non-motorist prior to impact that you feel did (or could have) contributed to the crash.
- Code 16. Age/Ability would be selected where a person’s reaction time or physical condition may have contributed to the crash or to not being able to avoid the crash.

Business Rules

- The first contributing factor field must be given a value.
- If the first or second factor is selected as 00. No Apparent Contributing Factor, then the remaining ones should be left empty.

Field 28: Protective/Reflective Clothing

Change(s):

- New

Rationale:

- Make it easy for the officer to identify which type of high-visibility protection the non-motorist was using.
- To enable better safety studies addressing non-motorist crashes, and what kind of counter-measures (e.g. education campaigns) might be useful.

PROTECTIVE/REFLECTIVE DEVICES/CLOTHING	1	2	3	4
01. Reflector(s) 02. Front Light 03. Rear Light 04. Reflective Clothing	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

Enter the codes corresponding to the protective and/or reflecting devices and/or clothing worn by the non-motorist.

Guidance

- Up to four codes can be entered.
- Enter the code corresponding to the most significant item in the first field, followed by any others that are applicable.

Business Rules

- If any of the four fields are left blank, then all subsequent fields must also be left blank

Involved Person/Non-Motorist Fields

Change(s):

- Located on Non-Motorist page in the same way as for the MOTORIZED TRFFIC UNIT/OCCUPANT page
- Show only the fields applicable to a non-motorist

Rationale:

- Make it easier for an officer to enter the appropriate information for a non-motorist

These fields are to be filled out using the INVOLVED PERSON OVERLAY (Overlay A). See the following page for reference.

This section of the Traffic Unit/Non-Motorist page should be filled out similarly to the occupant section of the MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C). See the manual section starting on page 88 for details.

Figure 22: Involved Person Overlay (Overlay A)

OVERLAY A

DR 3447 (11/09/18)

INVOLVED PERSON OVERLAY NOT TO BE SUBMITTED TO DOR

<div style="display: flex; justify-content: space-between;"> <div style="width: 40%;"> <p>Position In/On Vehicle</p> <div style="text-align: center; margin-bottom: 5px;">14</div> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td style="width: 20px;">03</td> <td style="width: 20px;">06</td> <td style="width: 20px;">09</td> <td style="width: 20px;"></td> </tr> <tr> <td style="text-align: center;">←</td> <td style="width: 20px;">02</td> <td style="width: 20px;">05</td> <td style="width: 20px;">08</td> </tr> <tr> <td style="width: 20px;">01</td> <td style="width: 20px;">04</td> <td style="width: 20px;">07</td> <td style="width: 20px;"></td> </tr> </table> <p style="margin-left: 100px;">10/11/12</p> <div style="margin-left: 100px; border: 1px solid black; padding: 2px;">13</div> <p>01. Field 29: F3-Safety Equipment – Helmet

F3

If the non-motorist was riding something a conveyance that justifies use of a helmet, then enter the appropriate code indicating a) whether or not a helmet was available, b) whether it was used, and c) if it was used properly.

Examples of what conveyances a non-motorist might be riding that justifies wearing use of a helmet:

- Bicycle
- Motorized Bicycle
- Other bicycle
- Personal Conveyance (such as a skateboard, longboard, roller skates or in-line skates)

Otherwise, enter the code A-N/A (for pedestrians and other non-motorists where a helmet would not be required), such as a pedestrian, etc.

Field 30: H-Injury Severity

H

Enter the code which best describes the injury severity to the non-motorist.

- 00. No apparent injury
- 01. Possible injury
- 02. Suspected Minor Injury
- 03. Suspected Serious Injury
- 04. Fatal Injury

Follow the same directions as per Injury Severity for vehicle occupants.

Field 31: I-Alcohol Suspected (Officer Opinion Only)

I

Enter the code that best corresponds to whether or not other alcohol were suspected, and why. Numbers **01** through **04** apply to "suspected". Numbers **05** and **08** apply to "not suspected".

Field 32: J-Tested for Alcohol

J

Enter the code that describes what type of test was given to determine alcohol use by the non-motorist.

Field 33: K-Marijuana Suspected (Officer Opinion Only)

K

Enter the code that applies to the Officer's suspicion regarding use of marijuana by this non-motorist.

This field is intended to record the officer's opinion only, and may or may not be supported by other evidence.

Field 34: L-Tested for Marijuana

L

Enter the code that describes what type of test was given/requested to determine marijuana use.

NOTE: Several additional codes have been added with respect to the type of test performed by the coroner.

Field 35: M-Other Drug/Impairment Suspected (Officer Opinion Only)

M

Enter the code that best corresponds to whether or not other drugs (besides marijuana) were suspected, and why. Numbers **01** through **04** apply to "suspected". Numbers **05** and **08** apply to "not suspected".

Field 36: N-Tested for Other Drugs

N

Enter the code that describes what type of test was given to determine drug use by the non-motorist.

To Complete Only for Fatalities or Suspected Serious Injuries

Field 75: EMS Trip

EMS Trip #

Enter the Trip Number as provided by the EMS staff.

Field 76: Taken To

Taken To

Enter the location where the occupant was taken (for example, Lutheran Hospital, Swan Funeral Home, or Denver Coroner).

If the individual was transported by both ambulance and air, then enter 02. Air. If some other mode of transportation (besides ambulance or air), then enter 04. Other, and describe in the narrative.

To Complete Only for Fatalities

Field 77: AA-Dead at Scene

AA		
<table border="1"><tr><td></td><td></td></tr></table>		

Enter the code corresponding to whether the person died at the scene (and was not transported for treatment).

- Enter 00 for No
- Enter 01 for Yes

Follow the same directions as for vehicle occupants.

Field 78: BB-Transported By

BB		
<table border="1"><tr><td></td><td></td></tr></table>		

Enter the code for the mode use to transport the individual.

Field 79: Expired Date and Time

Expired Date
Expired Time

Use the standard format MM/DD/YYYY to fill in this field. **Example:** 05/08/2005

Enter the pronounced date and time of death for all fatalities. If the death occurred at the scene, and the time is unknown, use the date and time of the crash.

Enter the time using the 24-hour clock system. Do not use a colon.

Example: If death occurred at 2:43 PM, the time would be entered as "1443".

ADDITIONAL MOTOR VEHICLE OCCUPANTS

(Optional Supplement A)

This supplemental page must be added to the DR3447 report if (and only if) there are more than four reportable occupants in any of the vehicles - i.e. more than can be entered on the page MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C).

Guidance

- The person information for the **driver** of each vehicle must be entered on the page MOTORIZED TRAFFIC UNIT/OCCUPANT (Page C), and not on this page
- This page must **not** be used to for any non-motorists, as non-motorists must be reported on the page entitled TRAFFIC UNIT/NON-MOTORIST (Page E).

Header Fields

Electronic Reporting

- In general, these header fields should be filled out automatically by the electronic reporting application when the crash report is entered electronically.

Field 1: Page ___ of ___ Pages

PAGE ___ OF ___ PAGES

Enter the page number for this page (according to its location in the crash report package) in the first blank.

Enter the same number of total number of pages as on the first page of the crash report package in the second blank.

For information on the order of pages in the crash report package, see ***The DR3447 Crash Report Package*** on page 17 of this manual.

Field 2: Case Number

Case #

Enter the same case number as on the first page of the crash report package.

Field 3: Agency ORI

Agency ORI

Enter the same agency ORI of the reporting agency as on the first page of the crash report package.

Field 4: (Law Enforcement) Agency Name

Agency Name

Enter the same name of the reporting agency as on the first page of the crash report package.

Involved Person/Additional Occupant Fields

These fields are to be filled out using the INVOLVED PERSON OVERLAY (Overlay A).

NOTE: For detailed guidance and descriptions on the fields listed below, see the section on **Driver/Occupant** , starting on page 109.

Information for drivers must be covered on the **MOTORIZED TRAFFIC UNIT/OCCUPANT** (Page C), and thus no driver-related information is to be included on this supplement.

Field 5: TU#

TU#

Enter the Traffic Unit # for the motorized vehicle in which this person was an occupant. See the Traffic Unit # field on the page **MOTORIZED TRAFFIC UNIT/OCCUPANT** (Page C).

Field 6: Name and Address

(Passenger) Name/Address

Enter the name and address of the occupant.

Field 7: A-Position in/on Vehicle

A

This field must be completed for all reportable occupants. Enter the position of the occupant or passenger as per the diagram provided on the **INVOLVED PERSON OVERLAY** (Overlay A).

All bus passengers are classified as 10.

Field 8: D-Ejection

D

Enter the code **00** if the occupant was not ejected. Enter the code **01** if the physical forces of the collision caused partial ejection of a major or significant portion of the body. Enter the code **02** if the occupant was fully ejected. Enter the code **03** if the occupant had to be extricated from the vehicle.

Field 9: E-Ejection Path

E

Enter the code corresponding to the path of ejection followed by the ejected (partially or completely) occupant.

Field 10: F1-Safety Equipment – Available

F1
<input type="text"/>

Enter the code that describes what type of restraint system was available in the Traffic Unit in which this person was an occupant.

Field 11: F2-Safety Equipment – Used

F2
<input type="text"/>

Enter the code that best describes how the system was used.

Field 12: F3-Safety Equipment – Helmet

F3
<input type="text"/>

Enter the code that best describes how the helmet was used (if applicable, i.e. for a motorcycle).

Field 13: AGE

AGE
<input type="text"/>

Enter the individual's age in years. Months are not included. Children under the age of one are entered as 0.

Business Rules

- If the occupant is a juvenile (under the age of 18) then **Field 25: Juvenile(s) Involved Check Box** **Juvenile(s) Involved Check Box** on MAIN CRASH REPORT PAGE (Page A) must be checked.

Field 14: G1-Airbag – Deployment

G1
<input type="text"/>

Enter the code that specifies which airbag(s) deployment at the position occupied by the person compared to other positions.

Field 15: G2-Airbag – Type

G2
<input type="text"/>

Enter the code that specifies which airbag(s) deployed at the position occupied by the person.

Field 16: H-Injury Severity

H
<input type="text"/>

Enter the code which best describes the injury severity to the party in question.

Field 17: I-Alcohol Suspected (Officer Opinion Only)

I
<input type="text"/>

Enter the code that best corresponds to whether or not other alcohol was suspected, and why.

Field 18: J-Tested for Alcohol

J
<input type="text"/>

Enter the code that describes what type of test was given to determine alcohol use.

Field 19: K-Marijuana Suspected (Officer Opinion Only)

K
<input type="text"/>

Enter the code that applies to the Officer's suspicion regarding use of marijuana by the person.

Field 20: L-Tested for Marijuana

L
<input type="text"/>

Enter the code that describes what type of test was given/requested to determine marijuana use.

NOTE: Several additional codes have been added with respect to the type of test performed by the coroner.

Field 21: M-Other Drug/Impairment Suspected (Officer Opinion Only)

M

Enter the code that best corresponds to whether or not other drugs (besides marijuana) were suspected, and why.

Field 22: N-Tested for Other Drugs

N

Enter the code that describes what type of test was given/requested to determine drug use.

NOTE: Several additional codes have been added with respect to the type of test performed by the coroner.

Field 23: Sex

SEX

Enter "M" for male or "F" for female.

To Complete Only for Fatalities or Suspected Serious Injuries

Field 80: EMS Trip

EMS Trip #

Enter the Trip Number as provided by the EMS staff.

Field 81: Taken To

Taken To

Enter the location where the occupant was taken (for example, Lutheran Hospital, Swan Funeral Home, or Denver Coroner).

If the individual was transported by both ambulance and air, then enter 02. Air. If some other mode of transportation (besides ambulance or air), then enter 04. Other, and describe in the narrative.

To Complete Only for Fatalities

Field 82: AA-Dead at Scene

AA
<input type="text"/>

Enter the code corresponding to whether the person died at the scene (and was not transported for treatment).

- Enter **00** for **No**
- Enter **01** for **Yes**

Field 83: BB-Transported By

BB
<input type="text"/>

Enter the code for the mode use to transport the individual.

Field 84: Expired Date and Time

Expired Date
<input type="text"/>
Expired Time
<input type="text"/>

Enter the pronounced date and time of death for all fatalities. If the death occurred at the scene, and the time is unknown, use the date and time of the crash.

Use the standard format MM/DD/YYYY to fill in this field. **Example:** 05/08/2005.

Enter the pronounced date and time of death for all fatalities. If the death occurred at the scene, and the time is unknown, use the date and time of the crash.

Enter the time using the 24-hour clock system. Do not use a colon.

Example: If death occurred at 2:43 PM, the time would be entered as "1443".

ADDITIONAL DAMAGED PROPERTIES (Optional Supplement B)

This supplemental page of the form must be added if (and only if) there are more than two distinct owners of property damaged during the crash.

The first two owners of damaged property should be identified on the bottom of Page B. Up to 8 additional damaged property owners can be identified on this supplement.

Figure 24: Supplement B – With Reference Numbers

Header Fields

Electronic Reporting

- In general, these header fields should be filled out automatically by the electronic reporting application when the crash report is entered electronically.

Field 1: Page ___ of ___ Pages

PAGE ___ OF ___ PAGES

Enter the page number for this page (according to its location in the crash report package) in the first blank.

Enter the same number of total number of pages as on the first page of the crash report package (**Field 1: Page 1 of ___ Pages**) in the second blank.

For information on the order of pages in the crash report package, see *The DR3447 Crash Report Package* on page 17 of this manual.

Field 2: Case Number

Case #

Enter the same case number as on the first page of the crash report package.

Field 3: (Law Enforcement) Agency ORI

Agency ORI

Enter the same agency ORI of the reporting agency as on the first page of the crash report package.

Field 4: (Law Enforcement) Agency Name

Agency Name

Enter the same name of the reporting agency as on the first page of the crash report package.

Damaged Property Fields

Fill in one section of this supplemental page for each owner of property that was damaged in the crash.

NOTE: If any public property was damaged in the crash, make sure that you mark **Field 7:Public Property Damaged Check** Box on **76NARRATIVE/DIAGRAM (Page B)**.

Field 5: Damaged Property Owner

Owner 3

This field is pre-filled with numbers 3-10.

Field 6: Damaged Property Owner – Name

Damaged Prop. Last Name	First Name
-------------------------	------------

Enter the information of the owner of property damaged in a crash.

The owner of the property, if known, should always be entered. If another individual, such as a renter, has immediate control of the property, his or her name should be listed in the narrative.

Field 7: Damaged Property Owner – Address

Address		
City	State	ZIP

Enter the street, route, or P.O. Box number, city, state, and zip code of up to two owner(s) of the damaged property.

Field 8: Damaged Property Description

Damaged Property Description

Briefly describe the damaged property, with just a few words, for example “STOP sign” or “guardrail” or “utility cabinet at intersection”.

INVOLVED PERSON OVERLAY (Overlay A)

The following overlay is to be used to fill out the Occupant Details portion of any copies of Page C, TRAFFIC UNIT/NON-MOTORIST (Page E), and/or Additional Occupants Supplements (Supplement A) that are included in the Crash Report Package.

Figure 25: Involved Person Overlay (Overlay A) – With Reference Numbers

GLOSSARY

Some of the definitions following are from the ANSI D16.1-2007 Manual on the Classification of Motor Vehicle Traffic Accidents (Seventh Edition). The primary purpose of the D16 manual is to promote uniformity and comparability of motor vehicle traffic accident statistics. The definitions taken from ANSI D16.1 are provided as guidelines and clarification of terminology. However, definitions in state law and elsewhere in the DR3447 manual always supersede those of the D16 manual.

alley For the purposes of traffic accident reporting, alleys are treated like any other roadway.

alley related Any accident which occurs in an alley or occurs when a vehicle is entering or exiting an alley.

animal drawn vehicle Any vehicle powered or drawn by an animal. This would include horse drawn buggy, horse drawn stagecoach, ox drawn wagon, etc.

at intersection This term describes an accident in which the first harmful event occurs in the confines of an intersection.

bus A bus is a motor vehicle designed to transport nine or more people, including the driver. It is a commercial motor vehicle if it is used in commercial enterprise.

bicycle A vehicle upon which a person may ride and which is propelled by human power applied to pedals. It may have either two wheels in tandem, or three wheels-two parallel and one forward. All wheels must be more than 14" in diameter.

cataclysm A cataclysm is an avalanche, cloudburst, cyclone, earthquake, flood, hurricane, landslide, lightning, tidal wave, tornado, torrential rain, or volcanic eruption.

commercial carrier Any owner of a motor vehicle, truck, laden or unladen truck tractor, trailer, or semi-trailer used in the business of transporting persons or property over the public highways for profit, hire, or otherwise in any business or commercial enterprise.

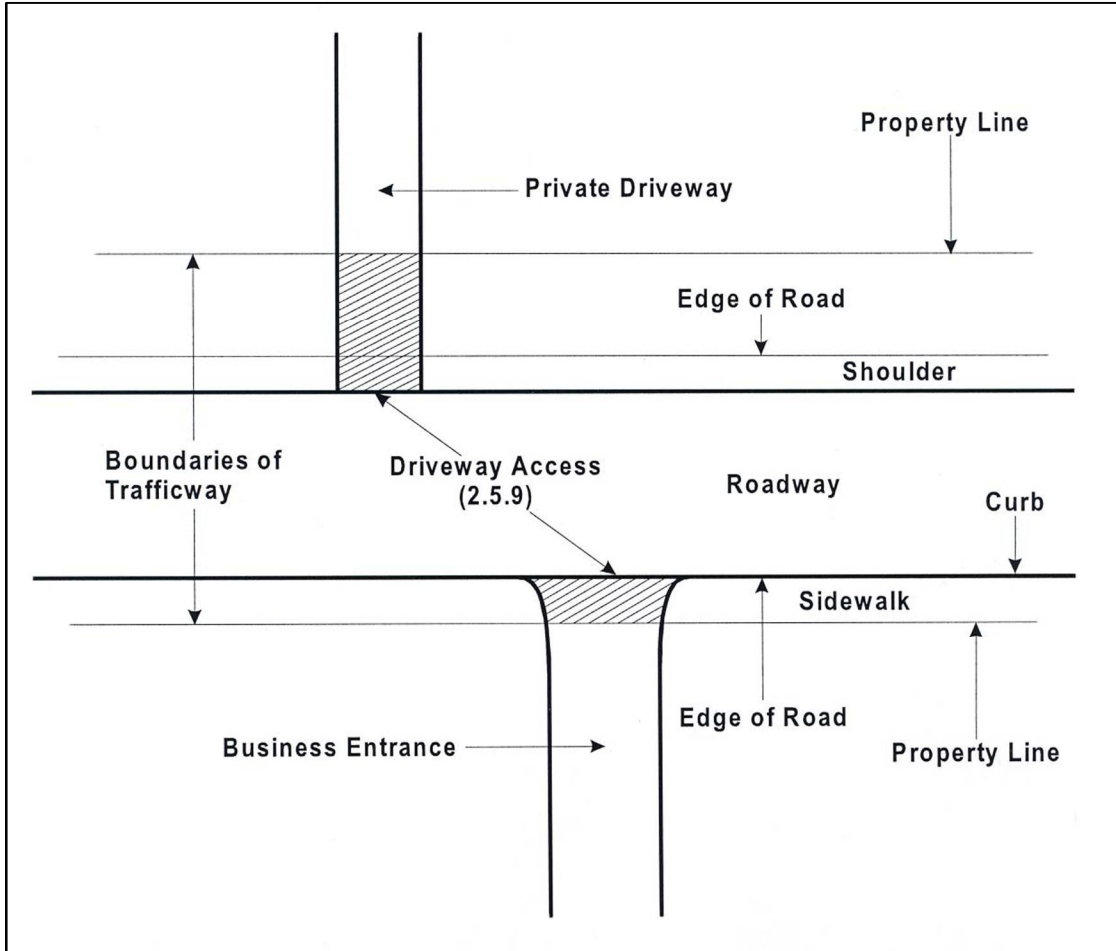

commercial enterprise A venture or undertaking involving financial commitment and connected to business and commerce in general. Included in this definition are churches, food banks, charities and other non-profit organizations.

controlled access highway Every highway, street or roadway in which preference is given to through traffic and access is limited and controlled by on and off ramps.

crosswalk That portion of a roadway included in the prolongation or connection of the lateral lines of sidewalks or any portion of the roadway distinctly indicated for pedestrian crossing by lines or other marking.

driveway access A driveway access is a roadway providing access to property adjacent to a trafficway.

Figure 26: Driver Access Diagram

evident non-incapacitating injury This type of injury is evident to observers at the scene, but is not a fatal or incapacitating injury. Examples include bruises, lumps, and lacerations. Injuries that cannot be seen, such as limping or complaints of pain, are classified as possible injury.

farm vehicle When a vehicle is exclusively used as an implement of husbandry, it is classified as a farm vehicle. If that same vehicle is used solely for transportation, it is no longer classified as a farm vehicle. For example, a person driving his tractor into town to pick up groceries, the tractor would be classified as a motor vehicle instead of a farm vehicle.

fatal injury For the purposes of the accident report, a fatal injury is any injury that results in death within thirty days of the accident. Note that person must be born prior to the accident to be classified as a fatality. For example, a pregnant woman is involved in an accident that causes the birth of the child at the accident scene. The child subsequently dies as a result of injuries sustained in the accident. The child will NOT be classified as a fatality.

fire Incidents in which injuries or damage are solely the result of a vehicle fire are not investigated as traffic accidents regardless of whether the vehicle was in motion or not.

first harmful event is the first point of injury or damage in the sequence of events in a traffic accident.

gore is an area of land where two roadways converge or diverge. The direction of traffic must be the same on both sides of the area, and the area includes shoulders or marked pavement between the roadways. The gore area stops at 60 meters (approximately 200 feet) from the convergence or, if another road is within 70 meters, the gore stops 10 meters away from that road.

Figure 27: Gore Diagram #1

Figure 28: Gore Diagram #2

gross combined weight rating (GCWR) A GCWR is the sum of the GVWRs for the units which make up a truck combination.

gross vehicle weight rating (GVWR) is a value specified by the manufacturer for a single-unit truck, truck tractor, or trailer. In the absence of a GVWR, an estimate of the gross weight of a fully loaded unit may be substituted.

harmful event is that point in the sequence of events when injury or damage occurs.

highway interchange Defines the boundaries of the ramps of the controlled access highway.

Figure 29: Highway Interchange

implement of husbandry Every vehicle designed, adapted or used for agricultural purposes. Also see *farm vehicle*.

incapacitating injury Any injury (other than a fatal injury) that prevents the injured person from walking, driving, or normally continuing the activities the person was capable of performing before the injury is an incapacitating injury. Examples include severe lacerations, broken limbs, and skull, chest, or abdominal injuries. Momentary unconsciousness is not included.

intermodal container means a freight container designed and constructed to permit it to be used interchangeably in two or more modes of transport.

intersection An intersection is an area which contains a crossing or connection of two or more roadways (not classified as driveway access). An intersection is embraced within the prolongation of the lateral curb lines or the lateral boundaries of the roadways if curbs are not present. See the diagram in Figure 10: Intersection.

intersection-related An accident in which the first harmful event occurs on an approach to or exit from an intersection and the harmful event results from movements controlled by the intersection.

interstate carrier An interstate carrier is any commercial vehicle that hauls between states, between two points in a single state by going through another state, or between two places in a state with cargo that originated outside the state.

Intrastate carrier Any commercial motor vehicle which does not meet the requirements of an interstate carrier would be classified as an intrastate carrier.

light rail A vehicle other than a railroad train for transporting persons or property upon rails, principally within a municipality.

median An area of a trafficway between parallel roads that separates travel in opposite directions. Note the distinction between a median and a separator. (See illustration under trafficway)

most harmful event That event in the sequence of events that caused the most significant injury or damage.

motorcycle For the purpose of the accident report, a motor vehicle designed to travel on not more than three wheels in contact with the ground and has an engine greater than 50cc in displacement. Excluded from this category are items of construction, farm, or industrial machinery.

motor-driven cycle A motor driven cycle meets the definition of a motorcycle, but has an engine displacement of 50 cc's or less and is designed for highway use. This excludes motor driven toys including, go-peds, mini-scooters, pocket bikes and motorized skateboards.

motor vehicle Any mechanically or electronically powered vehicle designed for highway use.

non-contact vehicle A vehicle that is directly involved in contributing to the traffic accident, yet does not make contact with involved vehicles, pedestrians or objects.

occupant Any person who is in or on a motor vehicle in transport.

overturning accident An accident in which the first harmful event is the overturning of a vehicle.

pedestrian Any person who is not an occupant of a vehicle. This includes persons operating mechanized toy vehicles, skateboards, etc., who are not otherwise classified as occupants on the DR3447.

person A person is any living human. Within the context of an accident report, a fetus is considered to be part of a pregnant woman rather than a separate individual.

pole trailer A pole trailer is a trailer designed to be attached to the towing vehicle by means of a reach or pole, or being boomed or otherwise secured to the towing road vehicle. These are ordinarily used for carrying property of a long or irregular shape such as poles, pipes, or structural members.

possible injury A possible injury is any injury reported or claimed which is not a fatal, incapacitating, or non-incapacitating evident injury.

private property Private property is property that is not included in the trafficway. Private property is not maintained or regulated by state or local transportation departments. Private property includes forest service roads and BLM land.

property Property is any physical object other than a person. Examples: real property, personal property, animals (wild and domestic), signs, guard rails, trees and property.

railway vehicle A vehicle designed for moving persons or property from one place to another on rails. When the vehicle is on rails, it is not considered a motor vehicle, i.e., high rail.

road A road includes both the roadway and any shoulder alongside the roadway.

roadside is the outermost part of the trafficway from the property line or other boundary to the edge of the first road. See illustration under trafficway.

roadway is that part of the trafficway designed, improved, and ordinarily used for motor vehicle travel. See illustration under trafficway.

roundabout is a circular intersection joining two or more streets which feeds traffic into a circulatory roadway that surrounds a central island. (Crashes which occur within the shaded area of the diagram below are classified as roundabout crashes).

Figure 30: Roundabout

school bus A school bus is a motor vehicle which is owned or under contract to a public school or governmental agency and is used for the transportation of school children to or from public school or school activities. Any automobile, bus, van, utility vehicle, truck, or other vehicle that is designed for the transportation of school children and which meets the criteria above qualifies as a school bus.

semi-trailer A semi-trailer is a trailer (other than a pole trailer) designed for carrying property and constructed so that part of its weight rests upon or is carried by the towing vehicle.

separator The area of a trafficway between parallel roads separating travel in the same direction, or separating a frontage road from other roads is called a separator. See illustration under trafficway. Note the difference between a separator and a median.

Sidewalk should be defined here – if publicly maintained and point of impact takes place on the side walk, this is a countable crash, not private property.

shoulder A shoulder is that part of the trafficway contiguous with the roadway for emergency use, for accommodation of stopped road vehicles, and for lateral support of the roadway structure. See illustration under trafficway.

single-unit truck This truck consists of a single motorized transport device. When connected to a trailer, such a device may be part of a truck combination.

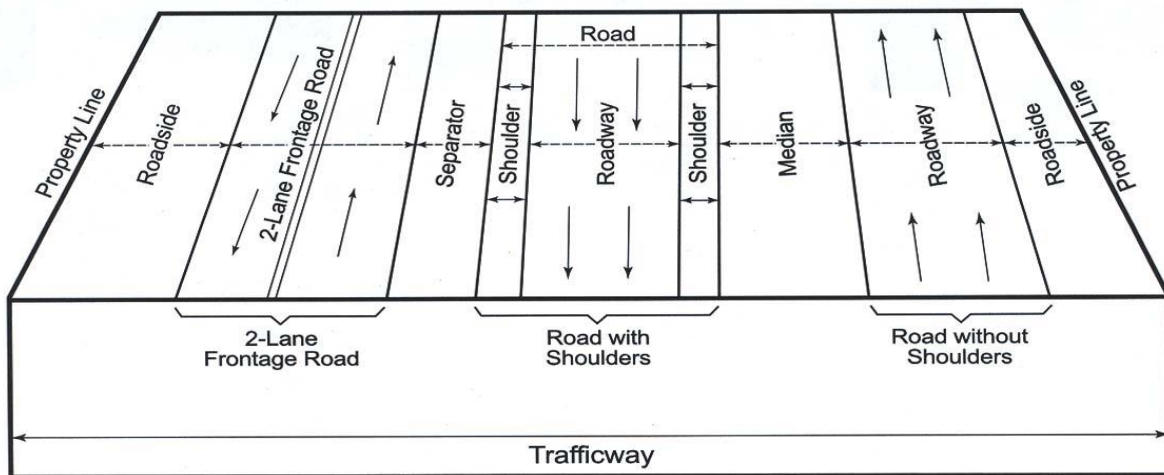

SUV A sports utility vehicle as defined by the manufacturer.

toy vehicle Any vehicle, whether or not home-built by the user, that has wheels with an outside diameter of not more than fourteen inches and is not designed, approved, or intended for use on public roadways or highways. Toy vehicles include, but are not limited to, gas-powered or electronic-powered vehicles commonly known as mini bikes, "pocket bikes", kamikaze boards, go-peds, and stand-up scooters.

traffic crash (or traffic accident) In the State of Colorado, a traffic crash is defined as unintentional injury or damage caused by the movement of a motor vehicle or its load.

trafficway A trafficway is any land way open to the public as a matter of right or custom - for moving persons or property from one place to another.

Figure 31: Trafficway Diagram

traffic unit A traffic unit is defined as any vehicle, bicyclist, or pedestrian (or other type of non-motorist) involved in a traffic crash.

trailer A trailer is a road vehicle designed to be drawn by another road vehicle. This includes pole trailers, semi-trailers, and full trailers.

transit bus Any vehicle meeting the definition of bus owned or contracted by a transit authority.

transport device Any device designed primarily for moving persons or property along with the device itself from one place to another is a transport device. Weapons and devices used within the confines of a building are not included. Human-powered devices that are not propelled by pedaling (such as skis or roller skates) are also excluded from this definition. Examples of devices which fit this definition include: airplanes, ships, helicopters, hovercraft, trains, snowmobiles, automobiles, buses, trucks, trailers, motorcycles, bicycles, mopeds, golf carts, and others.

transport vehicle A transport vehicle consists of one or more devices or animals and their load. When using the term to refer to a device or a unit of connected devices, it refers to them while idle or engaged in moving persons or property from one place to another. When referring to an animal or team of animals, it means that they are in use for moving persons or property other than the animal from one place to another. A movable device such as construction, farm, or industrial machinery is considered a transport vehicle if it is used outside the confines of a building and is used for moving people or other property or the device itself from one place to another. If any such device or animal has a load, the load is considered part of that transport vehicle.

transport way A transport way is any way or place reserved or commonly used for the operation of transport vehicles. Hiking trails, sidewalks, and footpaths are excluded.

truck A truck is a motor vehicle designed primarily for carrying property. Included are single-unit trucks and combinations.

truck combination A truck consists of a single-unit truck tractor together with one or more attached trailers.

truck tractor: A truck tractor is a motor vehicle consisting of a single motorized transport device designed for drawing trailers.

Figure 32: Typical Vehicle Silhouettes

vehicle A vehicle is defined as any conveyance considered to be a vehicle under Colorado Revised Statute. While bicycles are not motor vehicles, they are vehicles under the law.

APPENDIX D – REGISTRATION ABBREVIATIONS

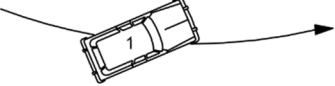

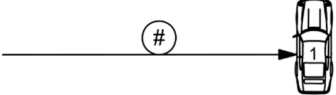

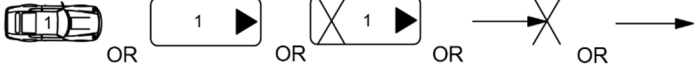

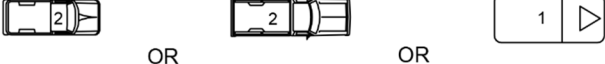

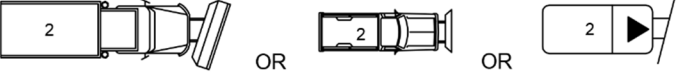

BATCH LOG	Batch login is done when the title application batches are received from the county offices. This notation on tracking lets us know when the paperwork was received at the state office.
AIR	Automobile Inspection Readjustment Program
ANR	Agricultural and Natural Resources
BOS	Bill of Sale
BT	Bond Batch-Ownership documents not available. The VIN cannot be corrected with documentation or as part of the special ID process. Title issued by the state title section.
CBI	Colorado Bureau of Investigation
CCIC	Colorado Crime Information Center system
CO	Court Order
CT	Colorado to Colorado title batch issued at the state
CVIN	Confidential Vehicle Identification Number
DBA	Doing Business As
DP	Duplicate title batch printed at the county office, handed to the customer over the counter or mailed to the lien holder.
DRIVES	Colorado D river license, R ecord, I dentification and V ehicle E nterprise S olution
DV	Disabled Veteran
DT	Duplicate title batch printed at the state office.
DUP	Duplicate title
FILM LOGIN	Film login is done on tracking after the paperwork has been microfilmed. This is the address where the film is located if it needs to be located.
GOV BOS	Government Bill of Sale
GVW	Gross Vehicle Weight

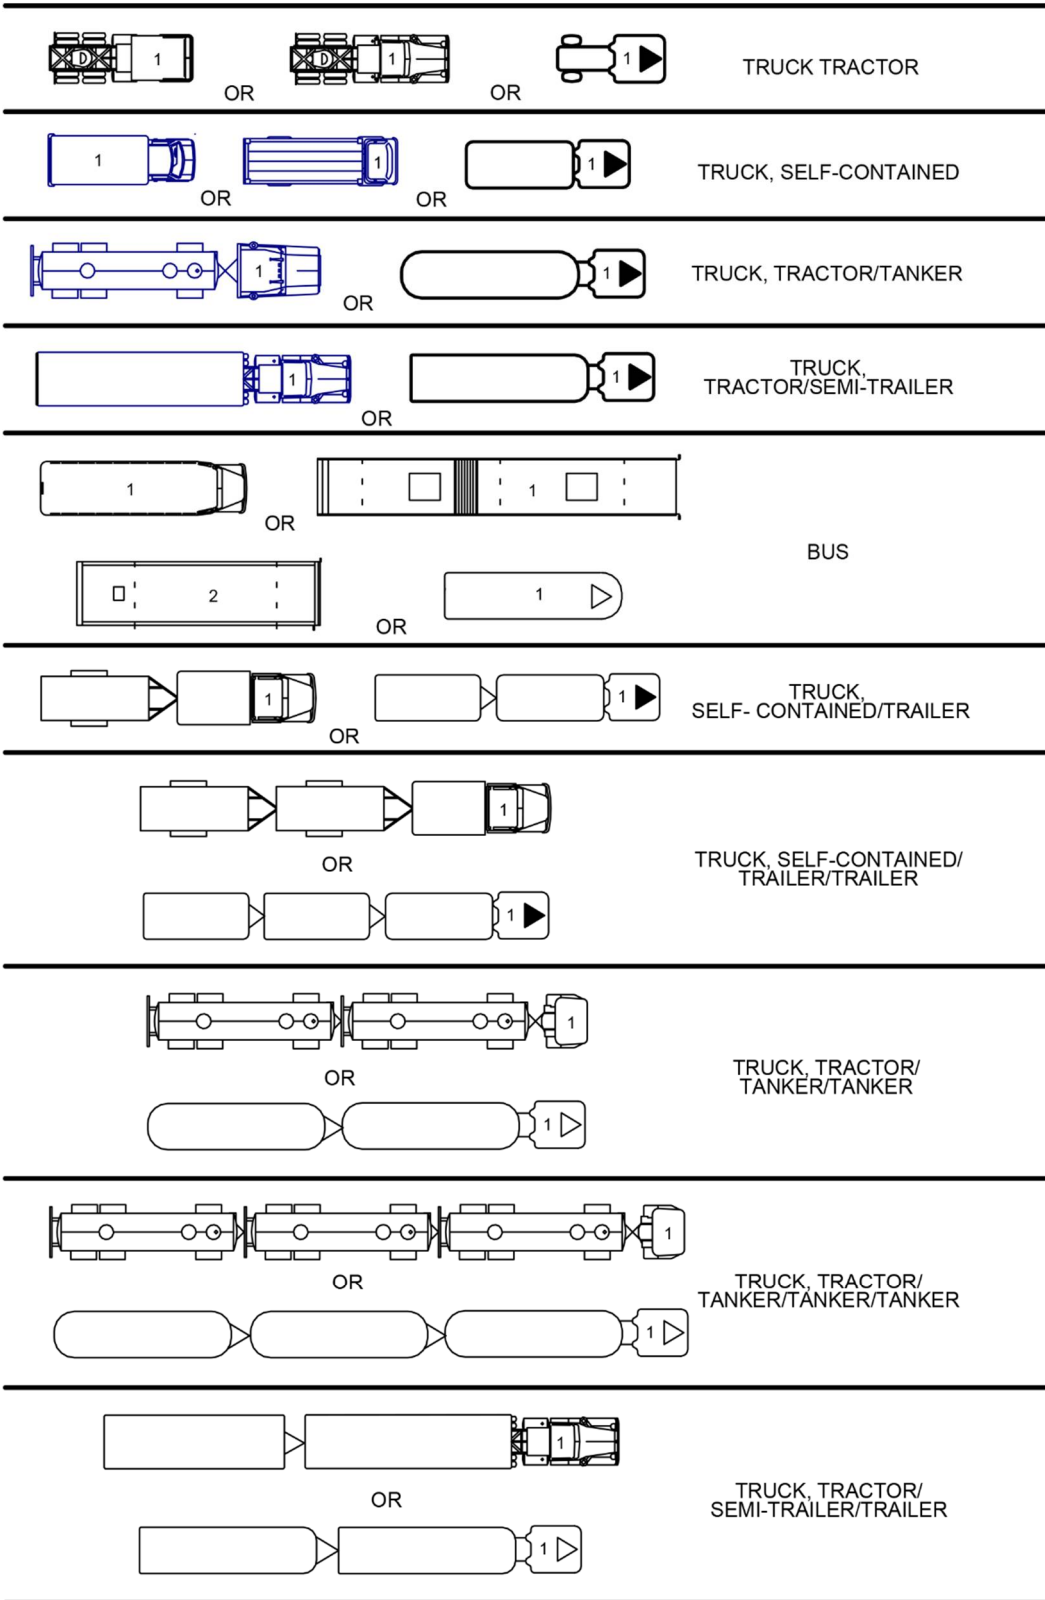

GVWR	Gross Vehicle Weight Rating
HMD	Homemade
HUTF	Highway Users Tax Fund
HVUT	Heavy Vehicle Use Tax
ID	Identification number
IRP	International Registration Proration
IDS	Integrated Data System
IT	Colorado to Colorado Title Batch. These titles were issued and printed at the office and handed to the customer over the counter.
JBC	Joint Budget Committee
JTWROS	Joint Tenancy with Rights of Survivorship
MCO	Manufacture Certificate of Origin
MSO	Manufacturer Statement of Origin
MIIDB	Motorist Insurance Identification Data Base
MSRP	Manufacture Suggested Retail Price
MT	Miscellaneous Batch. This batch includes corrections as well as other types of titles.
MVBG	Motor Vehicle Business Group
NATB	National Automobile Theft Bureau
NICB	National Insurance Crime Bureau
NVIS	New Vehicle Information Sheet (Canadian type of MSO)
ODO	Odometer
OTR	Titles that were mailed and returned to the State as undeliverable
PH	Pearl Harbor
PHT	Purple Heart
PIP	Plate Inventory Program

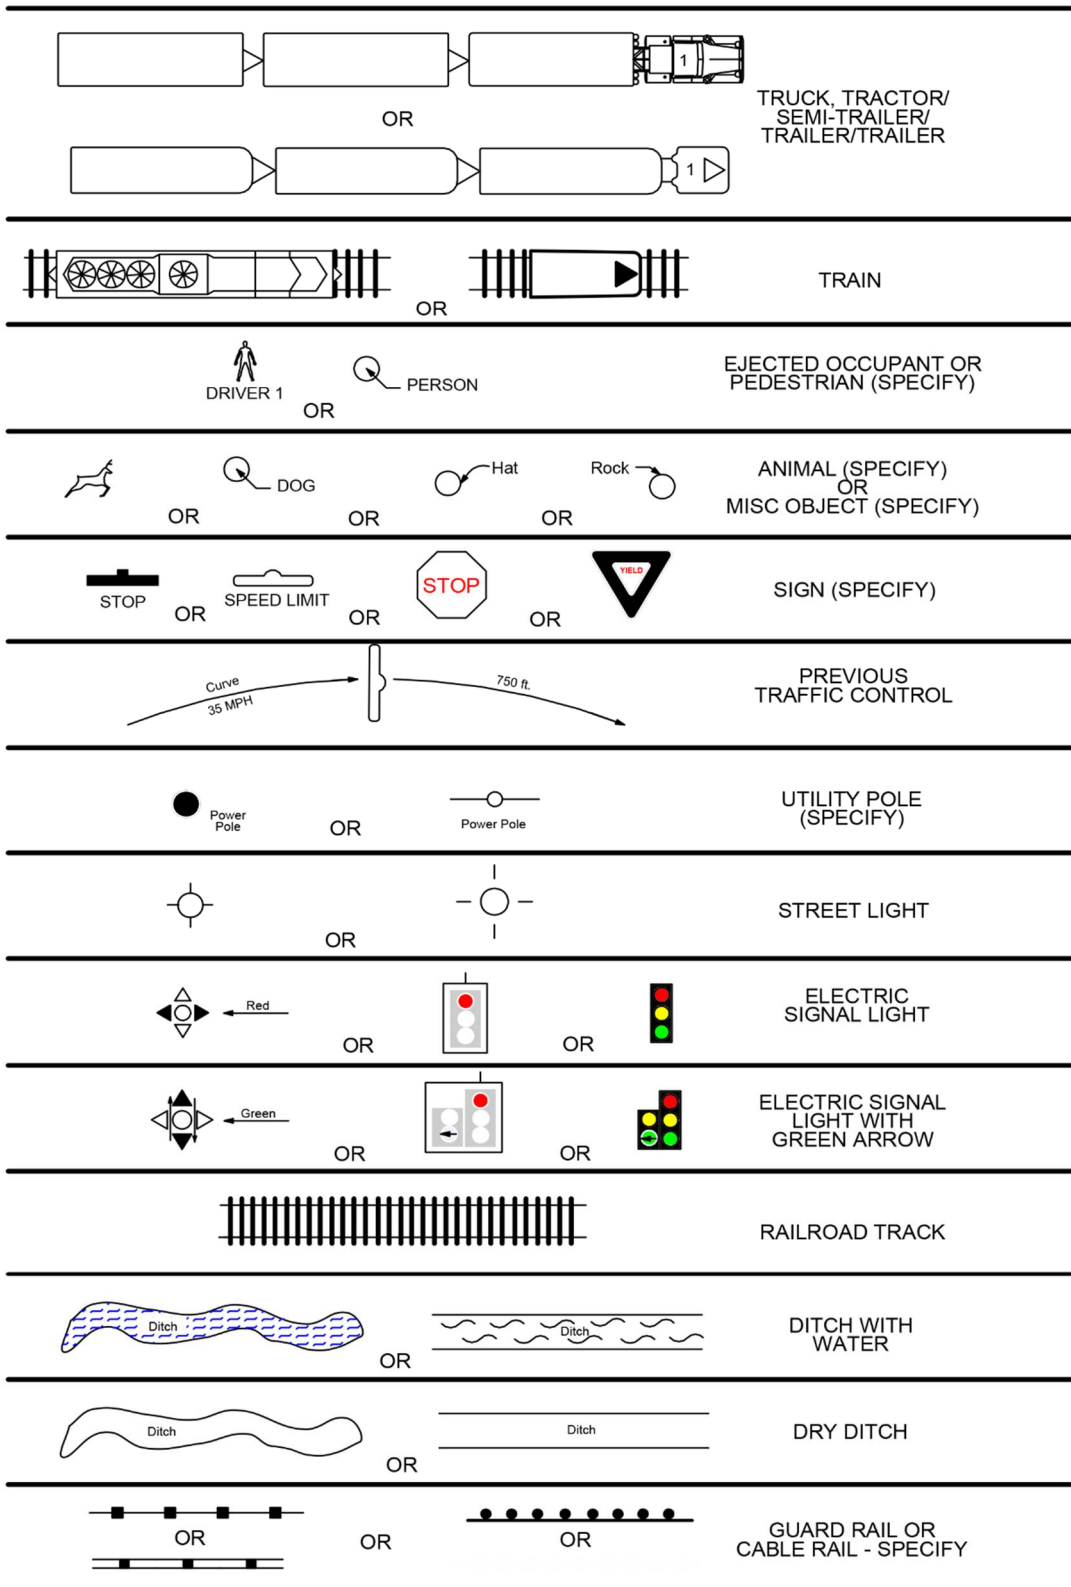

POA	Power of Attorney
POT	Previous Ownership Tax
POW	Prisoner of War
PTO	Power Takeoff
REB	Rebuilt
RT	Regular Batch. Includes out-of-state titles issued by the state and any title or MSO that will have a lien filed.
SMD	Special Mobile Machinery Dealer
SME	Special Mobile Equipment (no longer used, refer to SMM)

APPENDIX G – VEHICLE BODY STYLES AND ABBREVIATIONS

Body Styles - Use the one that best describes the vehicle

These descriptions were derived from the Colorado Revised Statutes, the Second College Edition of the American Dictionary, and the Standard Catalog of American Cars.

AM	Ambulance	A vehicle equipped to transport the sick and injured.
BU	Bus	A large vehicle for carrying passengers.
CP	Coupe/2D	A two-door passenger vehicle.
CT	Camper Trailer	A wheeled vehicle without motive power, less than 26' long that is pulled and is commonly used for temporary living/sleeping.
CV	Convertible	A passenger car with a convertible or removable top
HB	Hatchback/ Liftback/3D	A passenger car with a rear lift-gate
LM	Limousine	A large passenger vehicle usually driven by a chauffeur and sometimes having a glass partition separating the passenger compartment from the driver's seat.
MC	Motorcycle	A vehicle with two wheels in tandem, may sometimes have three wheels.
MH	Manufactured Home	A wheeled pre-constructed building unit without motive power commonly used for occupancy by persons.
MT	Motor Home	A vehicle built on a truck chassis and designed to serve as self- contained living quarters for travel.
NV	Neighborhood Electric Vehicle	A self-propelled electrically powered motor vehicle that has speed attainable in one mile that does not exceed 25 miles per hour.
PK	Pickup	A light truck with an open bed
PV	Passenger Van	A fully enclosed vehicle (built on a truck chassis) to transport passengers. Has seats throughout; usually has windows in rear compartment.
SD	Sedan/4D	A four-door passenger vehicle

SM	Special Mobile	A vehicle, self-propelled or without motive power, not machinery designed to carry cargo or passengers and may be moved incidentally over the public highways.
TC	Trailer Coach	A wheeled vehicle without motive power, 8' wide or less and over 26' long, equipped as living quarters.
TK	Truck	A variety of heavy vehicles designed to carry cargo.
TL	Trailer	A wheeled vehicle, without motive power and an empty weight over 2,000 lbs., used to carry a load and pulled by a motor vehicle.
TR	Tractor	A motor vehicle designed and used primarily for drawing other vehicles (normally a large trailer) but not constructed to carry a load other than a part of the weight of the vehicle that it pulls. Tractor has a cab only, no bed.
TT	Truck Tractor	A motor vehicle designed & used primarily for drawing other vehicles (normally a large trailer) but is constructed to carry a load other than a part of the weight of the vehicle that it pulls. Tractor has a cab and a bed.
TU	Trailer, Utility	A wheeled vehicle without motive power and an empty weight less than 2,000 lbs., used to carry a load and pulled by a motor vehicle.
UP	Utility Passenger	A vehicle that is used to transport passengers. Owner declares primary usage, AKA SUV (Example: Bronco, Blazer, Cherokee, Land Rover).
UT	Utility Truck	A vehicle that is used to transport passengers. Rear seat may be removed to carry cargo. Owner declares primary usage. (Example: Explorer, Bronco, Blazer).
VN	Truck Van	A fully enclosed vehicle (built on a truck chassis) to transport cargo. Usually has only one seat & only windows in the passenger compartment back end

APPENDIX H – VEHICLE COLORS

Effective July 1, 1999 the primary color of a motor vehicle is required on all NEW title applications for registration. (HB98-1001)

The following abbreviations are used to identify colors:

Abbreviation	Name	Color
AME	Amethyst	
BGE	Beige	
BLK	Black	
BLU	Blue	
BRO	Brown	
BRZ	Bronze	
CAM	Camouflage	NA
COM	Chrome	
CPR	Copper	
CRM	Ivory/Cream	
DBL	Dark Blue	
DGR	Dark Green	
GLD	Gold	
GRY	Gray	
GRN	Green	
LAV	Lavender	

Abbreviation	Name	Color
LBL	Light Blue	
LGR	Light Green	
MUL	Multi-colored	NA
MAR	Burgundy/Maroon	
MVE	Mauve	
ORG	Orange	
PNK	Pink	
PLE	Purple	
RED	Red	
SIL	Silver	
TAN	Tan	
TEA	Teal	
TPE	Taupe	
TRQ	Turquoise	
WHI	White	
YEL	Yellow	

THIS PAGE LEFT INTENTIONALLY BLANK

APPENDIX I – ESTIMATING SPEEDING

The following formulas are included to assist the investigating officer in determining a reasonable estimate of speed for the involved vehicle prior to difficulty, when tire marks are left on the roadway as part of the crash.

When skid marks are present, the formula

$$S = \sqrt{30df}$$

May be used where S = the speed of the vehicle prior to first braking, d = the total distance the vehicle skid (the length of the longest single skid mark) and f = the drag factor of the roadway surface (see the chart on the next page).

Example Straight Skid Mark Calculation:

Conditions:

- Straight skid marks, with the longest one being 100 feet
- Roadway surface is concrete, fairly worn down
- The pavement is dry
- At first guess, the vehicle was traveling at more than 30 MPH

We'll use the formula $S = \sqrt{30df}$ and the table below to calculate the speed the car was traveling before it started to skid.

With $d = 100$, and $f = 0.65$, we have $\sqrt{30df} = \sqrt{30 \cdot 100 \cdot .65} = \sqrt{1950} = 44$

If the vehicle went into a "yaw" prior to impact, the formula

$$S = 3.86\sqrt{Rf}$$

May be used where R equals the radius of the "yaw" mark.

Example Yaw Skid Mark Calculation:

Conditions:

- Yaw skid marks, with
 - Track width is 8 feet, the chord length is 100 feet, and the yaw offset is 20 feet
- Roadway surface is concrete, fairly worn down
- The pavement is dry
- At first guess, the vehicle was traveling at more than 30 MPH

We'll use the formula $S=3.86 \sqrt{Rf}$ and the table below to calculate the speed the car was traveling before it started to skid.

NOTE TO COLORADO TEAM:

Based on my web research I think this is more to determine the speed of a car that started to drift as opposed to a car that was came to a stop. This isn't clear in the original manual

The whole calculation for R was missing from the original manual.

*To calculate R, we need $(\text{chord length})^2 / (\text{Yaw offset} * \text{track width}) + \text{Yaw offset} / 2 - \text{track width} / 2$*

$$\begin{aligned}
 &= 100 * 100 / (20 * 8) + 20/2 - 8/2 \\
 &= 10,000 / 160 + 10 - 4 \\
 &= 68.5
 \end{aligned}$$

*With $R = 68.5$ and $f = 0.65$, we have $3.86\sqrt{Rf} = \sqrt{68.5 * .65} = \sqrt{44.525} = 25.8$*

BTW, there is an on-line calculator <http://www.ohiopd.com/skidmarks.php>

Note: The above listed information regarding determination of speed from tire marks left on the roadway is sufficient for the purpose of this entry on the crash report form. However, by themselves, these calculations should not normally be used for the prosecution of a speed offense.

These formulas are general in nature. An officer should be familiar with each formula and its variations before attempting to use it to estimate speed.

Table 4: Coefficients of Friction of Various Roadway Surfaces

Description of Road Surfaces	DRY				WET				
	Less than 30 MPH		More than 30 MPH		Less than 30 MPH		More than 30 MPH		
	From	To	From	To	From	To	From	To	

PORTLAND CEMENT								
New, Sharp	.80	1.20	.70	1.00	.50	.80	.40	.75
Traffic	.60	.80	.60	.75	.45	.70	.45	.65
Polished	.55	.75	.50	.65	.45	.65	.45	.60
ASPHALT or TAR								
New, Sharp	.80	1.20	.65	1.00	.50	.80	.45	.75
Traveled	.60	.80	.55	.70	.45	.70	.40	.65
Traffic Polished	.55	.75	.45	.65	.45	.65	.40	.60
Excess Tar	.50	.60	.35	.60	.30	.60	.25	.55

SNOW								
Packed	.30	.55	.35	.55	.30	.60	.30	.60
Loose	.10	.25	.10	.20	.30	.60	.30	.60

Crash Investigation Formulas

Energy Loss Formula:

$$S = \sqrt{30df_a}$$

S= speed

d= distance

f_a= adjusted coefficient of friction

*Can be used to calculate minimum speed of a vehicle at the beginning of a skid mark as

well as the minimum speed of a vehicle when it starts to roll*

Adjusted Coefficient of Friction Formula:

$$f_a = \mu n \pm m$$

f_a= adjusted coefficient of friction

μ= level coefficient of friction

n= braking efficiency

m=slope

Slope Formula

$$m = \frac{\text{rise}}{\text{run}}$$

m=tan θ

$\theta = \tan^{-1}(m)$

Combined Speed Formula

$$S = \sqrt{S_1^2 + S_2^2 + S_3^2 + \dots}$$

Used to find minimum speed of vehicle traveling over multiple surfaces

Yaw Mark Formulas:

$$R = \frac{C^2}{8m_o} + \frac{m_o}{2}$$

R=Radius

C=Chord

m_o =middle ordinate

Chord and middle ordinate must be in the same units

$$S = 3.86\sqrt{R(f \pm m)}$$

R=Radius (calculated from previous formula)

f=level coefficient of friction

m=slope

The braking efficiency will always be 100% on a yaw

Speed and Velocity

$$S = \frac{\text{Velocity}}{1.466} \quad (\text{Speed is in mph})$$

$$V = (1.466) \times S \quad (\text{Velocity is in ft/s})$$

Drag Sled Formulas

$$f = \frac{F}{W}$$

f=coefficient of friction

F=Force (Required to pull drag sled)

W=Weight of drag sled

7 pulls is optimal; add up the Force of the pulls and divide by # of pulls to find Force

APPENDIX J – TRUCK AND BUS HAZ-MAT

Nine Classes of Hazardous Materials

<p>Class 1 Explosives Divisions: 1.1, 1.2, 1.3, 1.4, 1.5, 1.6</p>	<p>Class 2 Gases Divisions: 2.1, 2.2, 2.3</p>	<p>Class 3 Flammable Liquid and Combustible Liquid</p>	<p>Class 4 Flammable Solid, Spontaneously Combustible & Dangerous When Wet: Divisions 4.1, 4.2, 4.3</p>	<p>Class 5 Oxidizer & Organic Peroxide Divisions 5.1 & 5.2</p>
<p>Class 6 Poison (Toxic) & Poison Inhalation Hazard</p>	<p>Class 7 Radioactive</p>	<p>Class 8 Corrosive</p>	<p>Class 9 Miscellaneous</p>	<p>Dangerous</p>

Reporting Hazardous Materials Information

ACCURATE REPORTING SAVES LIVES

Data you collect is used to calculate risk assessment, determine response methods and develop regulations. Vehicles carrying hazardous materials are required to carry shipping papers containing the HM Class and ID number (or name). Your Accident or Collision Report Supplement may ask the following hazardous materials questions (exact wording will vary by state):

Some Common Placards:

1. DOES THE VEHICLE HAVE A HAZARDOUS MATERIALS PLACARD?
YES NO

Placards should be on all four sides of the vehicle. Freight containers, box trailers, etc. that have bulk containers inside will not have the ID number on the outside of the trailer but on the bulk container itself.

2. ENTER THE FOUR-DIGIT NUMBER (OR NAME) FROM THE PLACARD **1 9 9 3**

The four-digit number may be on an orange panel or a white "square-on-point" panel. If no four-digit number appears on the placard, enter the Placard Name.

3. ENTER THE HAZARDOUS CLASS NUMBER ON BOTTOM OF PLACARD **3**

The Class Number can be a one- or two-digit number with a decimal in the middle. **5.1**

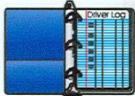

It is critical for identifying and studying various types of Hazardous Materials involved in traffic crashes.

4. WAS HAZARDOUS CARGO RELEASED? YES NO

The intent of this question is to determine whether any of the placarded material was released or escaped from its transport container into the environment. Fuel or oil carried by the vehicle for its own use is NOT considered cargo and should not be reported in this section.

HOW TO FIND THE RESPONSIBLE CARRIER AND CORRECT U.S. DOT

 <p>SIDE OF THE VEHICLE This is good for most of the cases for name and number. Look for a number preceded by the letters: USDOT</p>		<p>DON'T STOP....keep on moving ... The information on the side of the truck may not be the U.S. DOT #, name or address of the responsible motor carrier.</p>	<p>DRIVER INTERVIEW:</p> <ol style="list-style-type: none"> 1. Is the vehicle leased or rented? 2. Who is the motor carrier responsible for this load? 3. Who is directing and controlling the movement of this vehicle? 4. Where is the motor carrier's principal place of business? 
--	---	--	--

 <p>LEASE AGREEMENT identifies the name of the lessee and the U.S. DOT #.</p>		<p>DRIVER'S LOG contains the name of the motor carrier, city and state for the principal place of business.</p>	 <p>SHIPPING PAPERS provide the name of the motor carrier responsible for the load.</p>
---	---	--	---

NOTE: **VEHICLE REGISTRATION:** Generally good for identifying owner or registrant. **CAREFUL:** This may not be the responsible carrier!

HOW TO FIND THE RESPONSIBLE CARRIER AND CORRECT U.S. DOT

<p>EXAMPLE 1: John Smith owns his own truck tractor, operating under John Smith Trucking. He contracts with White Manufacturing to take one of its trailers loaded with its goods from New York to Los Angeles.</p> <p>Who is the Motor Carrier:</p> <p>A. John Smith? B. White Manufacturing?</p> <p style="border: 1px solid black; padding: 2px; display: inline-block;">John Smith is the motor carrier because he is the entity that has agreed to carry this particular load.</p>	<p>EXAMPLE 4: John Smith is driving a tractor semi-trailer owned by ABC Trucking.</p> <p>Who is the Motor Carrier:</p> <p>A. John Smith? B. ABC Trucking?</p> <p style="border: 1px solid black; padding: 2px; display: inline-block;">Both the tractor and semi-trailer are owned by ABC Trucking, so they are the motor carrier.</p>
<p>EXAMPLE 2: John Smith, driving his truck tractor utilizes a cargo broker, K&S Trucking, to obtain goods from Intermodal Inc. shipping company for his return trip to New York.</p> <p>Who is the Motor Carrier:</p> <p>A. John Smith? B. K&S Trucking? C. Intermodal Inc.?</p> <p style="border: 1px solid black; padding: 2px; display: inline-block;">On the return trip, John Smith is again the carrier.</p>	<p>EXAMPLE 5: John Smith is driving a tractor owned by ABC Trucking which has been leased to XYZ Trucking. XYZ uses the tractor to pull XYZ trailers in its regular shipping service.</p> <p>Who is the Motor Carrier:</p> <p>A. John Smith? B. ABC Trucking? C. XYZ Trucking?</p> <p style="border: 1px solid black; padding: 2px; display: inline-block;">In this case, XYZ is the carrier because XYZ is directing the carrying of the load.</p>
<p>EXAMPLE 3: John Smith, driving his truck tractor, leases his services to Polyester Chemical Company. Polyester directs Smith to deliver a semi-trailer from New York to St. Louis.</p> <p>Who is the Motor Carrier:</p> <p>A. John Smith? B. Polyester?</p> <p style="border: 1px solid black; padding: 2px; display: inline-block;">In this case, Polyester is the motor carrier because it told Mr. Smith to take the particular load.</p>
